## COMMERCIAL FERTILIZERS REPORT FOR 1934

### STATUTE AND REGULATIONS REGARDING COMMERCIAL FERTILIZERS

The term "commercial fertilizers" as used in the Connecticut fertilizer statute includes any and every substance imported, manufactured, prepared or sold for fertilizing or manuring or soil amendment purposes, except barnyard manure and stable manure that have not been artificially treated or manipulated, marl and lime.

*The seller is responsible for the proper labelling of each package of fertilizer, for the registration of each brand sold or offered for sale, for the payment of the required analysis fee and for the payment of the tonnage tax. If, however, proper labelling, registration and payments of analysis fees and of tonnage tax have been provided for by the manufacturer or by another responsible person, all sellers of such brands are released from the above mentioned requirements. The retailer, therefore, should assure himself that the requirements of the law have been met by the manufacturer of the brands which he handles, or himself be prepared to meet all these requirements.*

*It frequently happens that a manufacturer or jobber sells fertilizer materials which are the products of, and which are registered by, another firm or individual. Distributors in such cases should sell such materials by the exact brand names under which they are registered in order that there may be no mistake as to the identity of the brands. Any change in the brand names, or failure to make the identity of the brand and its manufacturer clear, makes the distributor liable for the registration of the product as his own brand.*

The law exempts from registration, and from other requirements referred to, only (1) fertilizers passing through the state in transit; (2) fertilizers and fertilizer materials shipped to regular fertilizer factories to be used for manufacturing purposes; and (3) fertilizers and fertilizer chemicals sold to the Connecticut Agricultural Experiment Station for experimental purposes.

---

NOTE: Analyses reported in this bulletin were made by Messrs. Nolan, Mathis and Walden; microscopic examinations by Miss Shepard; inspection and sampling by Mr. Churchill; and compilations by Mrs. Vosburgh.

## RECENT CHANGES AFFECTING FERTILIZER CONTROL

## LABELLING

Mixed fertilizers offered for sale in this State during the year 1933 were held to the requirements of a regulation issued by this Station June 25, 1931. The regulation is as follows:

"In view of the resolution passed by the Fertilizer Control Officials of the thirteen Northeastern States favoring (1) the statement of 'grade' as a part of the brand name of mixed fertilizers, e.g., XX Potato Manure 4-8-4; (2) that the significance of 'grade' shall be nitrogen, available phosphoric acid, and water-soluble potash, and in that order, e.g., XX Potato Manure 4-8-4 meaning 4% nitrogen (not 4% ammonia), 8% available phosphoric acid and 4% water-soluble potash; (3) that statements of grade and of guaranteed analysis shall be in whole numbers; and (4) that statements of guaranties shall include only minimum percentages of nitrogen, available phosphoric acid and water-soluble potash; and inasmuch as these recommendations are in accord with rules adopted by the Association of Official Agricultural Chemists, which rules are required by Sec. 5 of the Connecticut fertilizer law to be followed in administering the act; this Station will, on and after January 1, 1932, observe the foregoing procedure and urge its adoption by all concerned with the manufacture, sale and distribution of fertilizers and by those charged with the dissemination of information concerning fertilizers and fertilizer problems.

"In accordance with this understanding and acceptance of terms and procedure this Station will expect (1) that mixed fertilizer offered for registration for the year 1932 and thereafter will carry as a part of the brand name, whenever possible, the grade of the mixture; (2) that the statement of the grade will be in whole numbers; (3) that the significance of the numerals expressing the grade, and the order of them, will be nitrogen (not ammonia), available phosphoric acid and water-soluble potash; (4) that the statement of guaranteed analysis will give the percentages, in whole numbers only, of nitrogen, available phosphoric acid and water-soluble potash, and in that order; and (5), that tags or stencils upon bags will agree with the registration.

"In the case of mixtures in which phosphoric acid is derived from sources (e.g., bone and tankage), in which available phosphoric acid cannot be adequately evaluated by present analytical methods, total phosphoric acid may be stated in the guaranteed analysis, and the statement of grade may be omitted. In the statement of grade, total phosphoric acid may not be substituted for available."

While this regulation applies to *mixed* fertilizers only, it is recommended that guaranties for raw materials follow the spirit of the ruling so far as may be. Nitrogenous raw materials, for example, should be guaranteed in terms of nitrogen, but not necessarily in whole numbers; bone and tankage should show guaranties expressed in terms of nitrogen and total phosphoric acid rather than ammonia and bone phosphate of lime as formerly.

In the case of mixed fertilizers in which the phosphoric acid is derived from materials such as bone, in which present analytical methods do not adequately evaluate available phosphoric acid, it was regarded as advisable to omit the statement of grade and allow total phosphoric to be given in the guaranteed analysis, preferably instead of available, but if desired, in addition to it. In any case the qualifying phrase, "All the phosphoric acid is derived from bone", is permitted.

## METHODS OF ANALYSIS

Phosphoric acid, insoluble in ammonium citrate solution, has been determined this year according to the revised methods adopted by the Association of Official Agricultural Chemists at the annual meeting October, 1931, whereby a 1-gram charge of fertilizer is used instead of 2 grams and the time of digestion in ammonium citrate solution increased from 30 minutes to 1 hour.

## DEFINITIONS OF FERTILIZER MATERIALS AND INTERPRETATION OF TERMS USED IN FERTILIZER CONTROL

For the purpose of bringing about a better understanding among control officials and the fertilizer industry as to the identity of fertilizer materials and the significance of terms used in interpreting results of analysis, a special committee of the Association of Official Agricultural Chemists was appointed in 1921 to consider this question and from time to time pronouncements have been made.

The following definitions and interpretations are now official.<sup>1</sup>

## DEFINITIONS

## ACIDULATED FISH TANKAGE, ACIDULATED FISH SCRAP

Acidulated fish tankage, acidulated fish scrap, is the rendered product derived from fish and treated with sulfuric acid.

## ACTIVATED SEWAGE PRODUCTS

Activated sewage products are those made from sewage freed from grit and coarse solids and aerated after being inoculated with micro-organisms. The resulting flocculated organic matter is withdrawn from the tanks, filtrated with or without the aid of coagulants, dried, ground, and screened.

## AMMONIATED SUPERPHOSPHATE

Ammoniated superphosphate is a product containing superphosphate and/or dissolved bone and nitrogenous compounds, but without the addition of potash.

## ANALYSIS

Analysis, as applied to fertilizers, designates the percentage composition of the product expressed in terms of nitrogen, phosphoric acid, and potash in their various forms.

## ASHES FROM LEACHED WOOD

Ashes from leached wood are unleached ashes resulting from the burning of wood that has been exposed to or digested in water or other liquid solvent, as in the extraction of dyes, so that a part of the plant food has been dissolved and removed.

## BASIC PHOSPHATE SLAG

Basic phosphate slag is a by-product in the manufacture of steel from phosphatic iron ores. The product shall be finely ground and shall contain no admixture of

<sup>1</sup>Official and Tentative Methods of Analysis, A.O.A.C., 1930, page 490.

materials other than what results in the original process of manufacture. It shall contain not less than twelve per cent (12%) of total phosphoric acid ( $P_2O_5$ ), not less than eighty per cent (80%) of which shall be soluble in two per cent (2%) citric acid solution according to the Wagner method of analysis. Any other phosphate slag not conforming to this definition shall be designated low grade.

#### BRAND AND BRAND NAME

A brand is a term, design, or trademark used in connection with one or several grades of fertilizers.

A brand name is a specific designation applied to an individual fertilizer.

#### CRUDE, INERT, OR SLOW-ACTING NITROGENOUS MATERIALS

Crude, inert, or slow-acting nitrogenous materials are unprocessed organic substances relatively high in nitrogen, but having a very low value as plant food and showing a low activity by both the alkaline and neutral permanganate methods—below fifty per cent (50%) and eighty per cent (80%) respectively.

#### DISSOLVED BONE

Dissolved bone is ground bone or bone meal that has been treated with sulfuric acid.

#### DRIED BLOOD

Dried blood is the collected blood of slaughtered animals, dried and ground, and containing not less than twelve per cent (12%) of nitrogen in organic forms.

#### DRIED, PULVERIZED, OR SHREDDED MANURES

Dried, pulverized, or shredded manures are what the name indicates, and not mixtures of manures and other materials.

#### FERTILIZER GRADE

Fertilizer grade shall represent only the minimum guarantee of its plant food expressed in terms of nitrogen (not ammonia), available phosphoric acid, and water-soluble potash.

#### FISH TANKAGE, FISH SCRAP, DRY GROUND FISH, FISH MEAL FERTILIZER GRADE

Fish tankage, fish scrap, dry ground fish, fish meal fertilizer grade is the dried ground product derived from rendered or unrendered fish.

#### GARBAGE TANKAGE

Garbage tankage is the rendered, dried, and ground product derived from waste household food materials.

#### GROUND RAW BONE

Ground raw bone is dried ground animal bones that have not been previously steamed under pressure.

#### GROUND STEAMED BONE

Ground steamed bone is ground animal bones that have been previously steamed under pressure.

#### HOOF AND HORN MEAL

Hoof and horn meal is processed, dried, and ground hoofs and horns.

#### KAINIT

Kainit is a potash salt containing potassium and sodium chlorides and sometimes sulfate of magnesia with not less than twelve per cent (12%) of potash ( $K_2O$ ).

#### LEACHED WOOD ASHES

Leached wood ashes are ashes from burned unleached wood with part of their plant food removed by artificial means or by exposure to rains, snows, or other solvent.

#### MANURE SALTS

Manure salts are potash salts containing high percentages of chloride and from twenty per cent (20%) to thirty per cent (30%) of potash ( $K_2O$ ). The term double manure salts is discontinued.

#### MURIATE OF POTASH (COMMERCIAL POTASSIUM CHLORIDE)

Muriate of potash is a potash salt containing not less than forty-eight per cent (48%) of potash ( $K_2O$ ), chiefly as chloride.

#### NITRATE OF POTASH (COMMERCIAL POTASSIUM NITRATE)

Nitrate of potash is a salt containing not less than twelve per cent (12%) of nitrogen and forty-four per cent (44%) of potash ( $K_2O$ ).

#### NITRATE OF SODA (COMMERCIAL SODIUM NITRATE)

Nitrate of soda is commercial sodium nitrate containing not less than fifteen per cent (15%) of nitrogen, chiefly as sodium nitrate.

#### PRODUCTS SECURED BY HEATING CALCIUM PHOSPHATE WITH ALKALI SALTS CONTAINING POTASH

Products secured by heating calcium phosphate with alkali salts containing potash are non-acid phosphates with potash. They are not potassium phosphate.

#### SULFATE OF POTASH (COMMERCIAL POTASSIUM SULFATE)

Sulfate of potash is a potash salt containing not less than forty-eight per cent (48%) of potash ( $K_2O$ ), chiefly as sulfate, and not more than two and one-half per cent (2.5%) of chlorine.

#### SULPHATE OF POTASH-MAGNESIA

Sulfate of potash-magnesia is a potash salt containing not less than twenty-five per cent (25%) of potash ( $K_2O$ ), nor less than twenty-five per cent (25%) of sulfate of magnesia, and not more than two and one-half (2.5%) of chlorine.

#### SUPERPHOSPHATE

Superphosphate is a cured mixture of rock phosphate and sulfuric acid and/or phosphoric acid. The grade shall always be used as a prefix to the name. Example: 16% Superphosphate. The use of the term Acid Phosphate is discontinued.

#### TANKAGE

Tankage (without qualification) is the rendered, dried, and ground by-product, largely meat and bone from animals (slaughtered or that have died otherwise).

#### UNIT OF PLANT FOOD

A unit of plant food is twenty (20) pounds, or one per cent (1%) of a ton.

#### UNLEACHED WOOD ASHES

Unleached wood ashes are ashes from burned unleached wood that have had no part of their plant food removed and that contain four per cent (4%) or more of water-soluble potash ( $K_2O$ ).

## INTERPRETATIONS

## ACTIVITY OF WATER-INSOLUBLE NITROGEN IN FERTILIZERS

The alkaline and neutral permanganate methods distinguish between the better and the poorer sources of water-insoluble nitrogen; they do not show the percentage availability of the material. The available nitrogen of any product is measured only by carefully conducted vegetation experiments.

(a) The methods shall be used on mixed fertilizers containing water-insoluble nitrogen amounting to three-tenths of one per cent (0.3%) or more of the weight of the material. If a total nitrogen exceeds the minimum guarantee and is accompanied by a low activity of the insoluble nitrogen, the over-run shall be taken into consideration in determining the classification of the water-insoluble nitrogen.

(b) The water-insoluble nitrogen in mixed fertilizers showing an activity below fifty per cent (50%) by the alkaline method, and also below eighty per cent (80%) by the neutral method, shall be classed as inferior. This necessitates the use of both methods, also the provision as to over-run in (a), before classifying as inferior.

## AMOUNT OF CHLORINE PERMISSIBLE IN FERTILIZERS IN WHICH THE POTASH IS CLAIMED AS SULPHATE

Chlorine in mixed fertilizers in which the potash is claimed as sulfate shall not exceed one-half of one per cent (0.5%) more than what is called for in the minimum potash content based on the definition for sulfate of potash formulated by the committee. Calculate as follows: 0.05 times the percentage of potash found plus 0.5.

## BRAND NAME TO INCLUDE ANALYSIS OR GRADE OF FERTILIZER

The analysis or grade of a fertilizer should be included with its brand name, and so used by the manufacturer on sacks and in printed literature and by the control official in his reports and publications.

## FERTILIZER FORMULA

A fertilizer formula shall express the quantity and grade of the crude stock materials used in making a fertilizer mixture. For example: 800 pounds of 16 per cent superphosphate, 800 pounds of tankage (7.40 nitrogen and 9.15 total phosphoric acid), and 400 pounds of sulphate of potash-magnesia (twenty-six per cent (26%), potash).

## FINELY GROUND AS APPLIED TO BASIC PHOSPHATE SLAG

Finely ground in the definition of basic phosphate slag shall refer to actual size of particles as determined by the use of standard sieves, as follows: seventy per cent (70%) or more shall pass a 100-mesh, and ninety per cent (90%) or more shall pass a 50-mesh sieve.

## FORM OF NITROGEN IN CALCIUM CYANAMIDE

The nitrogen in calcium cyanamide shall be considered as being of organic nature.

## THE TERM LIME AS APPLIED TO FERTILIZERS

The term lime shall not be used in the registration, labelling, or guaranteeing of fertilizers or fertilizing materials, unless the lime is in a form to neutralize soil acidity, such as the oxide, hydroxide, or carbonate, or equivalent magnesia compounds.

## ORDER OF TERMS

The order of terms in mixed fertilizers shall be nitrogen first, phosphoric acid second, and potash third.

## NAME OF A FERTILIZER MATERIAL USED AS THE BRAND NAME OR PART OF THE BRAND NAME OF A MIXED FERTILIZER

When the name of a fertilizer material is used as part of the brand name of a mixed fertilizer, as for example blood, bone or fish, the nitrogen or phosphoric acid shall be derived from or supplied entirely by the material named. When the name of a fertilizer material is used as a brand or as part of a brand and the nitrogen and phosphoric acid is not supplied by the material named, the word brand shall follow the name of the material. Example: Fish Brand Fertilizer.

## STATEMENT OF GUARANTEE

The statement of guarantee of mixed fertilizers shall be given in whole numbers.

## REGISTRATIONS

## LATE REGISTRATIONS FOR 1933

To the brands registered for 1933 in our last report should be added:

- Ashcraft-Wilkinson Co., Atlanta, Ga.**  
Monarch Brand Prime Cottonseed Meal
- Joseph Breck & Sons Corp., 85 State St., Boston, Mass.**  
Breck's Rams Head Brand Sheep Manure
- Perkins Oil Co., Memphis, Tenn.**  
Goldenrod Brand 41% Protein Cottonseed Meal
- Maurice Pincoffs Co., Houston, Texas**  
Maurice Pincoffs Company 43% Cottonseed Meal

## REGISTRATIONS FOR 1934

For 1934, 61 firms and individuals registered 324 brands of fertilizers at this Station for sale in this State. As required by statute the brands so registered are listed as follows:

- The Acme Guano Co., Baltimore, Md.**  
Acme 4-8-4  
Acme 4-8-10  
Acme 5-8-5  
Acme 5-8-7  
Acme 7-6-6  
Ground Bone  
Sulphate of Ammonia  
Superphosphate  
6% Tankage
- American Agricultural Chemical Co., West Haven, Conn.**  
AA Aroostook Potato Manure 5-8-7  
AA Corn Favorite 3-10-4  
AA Double Strength Fertilizer 8-16-14  
AA General Crop Fertilizer 2-10-2  
AA Hi-Grade Tobacco Manure 6-3-6  
AA Monarch Fertilizer 4-8-4  
AA Peerless Fertilizer 4-8-7  
AA Prolific 10% Potash Fertilizer 2-8-10  
AA Superphosphate 16%  
AA Tobacco Starter 5-5-15  
AA Top Dresser 7-6-6  
AAC Castor Pomace  
AAC Dry Ground Fish  
AAC Fine Ground Bone  
AAC Ground Tankage  
AAC Muriate of Potash  
AAC Pulverized Sheep & Goat Manure  
AAC Sulphate of Ammonia  
Agrico for Corn 3-10-6  
Agrico for Lawns, Trees and Shrubs 7-6-6  
Agrico for New England 4-8-10  
Agrico for Potatoes and Vegetables 5-8-7
- Agrico for Tobacco 6-3-6**  
Agrico for Truck 5-10-5  
Double A Tobacco Fertilizer 5-3-5  
Sanderson's Formula B 4-8-7
- American Cyanamid Co., 535 Fifth Ave., New York City**  
Aero Cyanamid  
Ammo-Phos 11-48-0  
Ammo-Phos 16-20-0
- Apothecaries Hall Co., Waterbury, Conn.**  
Bone Meal 2.47%  
Bone Meal 3.70%  
Bone and Meat Tankage  
Calnitro  
Castor Pomace  
Cotton Hull Ashes  
Dry Ground Fish  
Liberty Domestic Sheep Manure  
Liberty High Grade Corn 2-12-4  
Liberty High Grade Market Gardeners 5-8-7

## INSPECTION OF 1934

The Station Agent has visited 78 towns and villages in the state and has drawn 335 official samples of fertilizer, including all the registered brands that could be found. The classification of these and of other samples analyzed is given in the summary.

## CLASSIFICATION OF FERTILIZER MATERIALS, 1934

	Number samples	Page
<i>Containing Chiefly Nitrogen</i>		
Nitrate of Soda .....	6	19
Calcium nitrate .....	2	19
Calurea .....	1	19
Urea .....	2	19
Cyanamid .....	1	19
Ammonium sulfate .....	7	19
Castor pomace .....	13	21
Cottonseed meal .....	91	21
Linseed Meal .....	4	21
II. <i>Containing Chiefly Phosphoric Acid</i>		
Superphosphate .....	16	23
Precipitated bone phosphate .....	4	23
III. <i>Containing Chiefly Potash</i>		
Muriate of Potash .....	7	26
Sulfate of potash .....	3	26
Cottonhull ashes .....	52	26
IV. <i>Containing Nitrogen and Potash</i>		
Nitrate of potash .....	14	27
Nitrate of potash and soda .....	1	27
Ground tobacco stems .....	2	27
V. <i>Containing Nitrogen and Phosphoric Acid</i>		
Dry ground fish .....	31	29
Tankage .....	12	29
Ground bone .....	33	29
VI. <i>Mixed Fertilizers</i>		
Commercial mixtures .....	184	34
Special and home mixtures .....	22	35
VII. <i>Miscellaneous</i>		
Sheep manure .....	20	53
Lime .....	15	53
Other miscellaneous .....	41	53
Check meals and fertilizers .....	24	58
Total .....	608	

## I. RAW MATERIALS CHIEFLY VALUABLE FOR NITROGEN

## NITRATE OF SODA AND OTHER NITROGENOUS MATERIALS

Three official samples of nitrate of soda were examined and all met or exceeded the **guaranties**. Three samples were examined for purchasers.

Two official samples of calcium nitrate also were found to meet their guaranties as did also two official samples of urea and one of cyanamid.

Seven official samples of ammonium sulphate were examined and no deficiencies were found.

One unofficial sample of calurea was examined for the Tobacco Station. It was guaranteed to contain 34 per cent of nitrogen and 34.30 per cent was found.

Analyses of official samples of these products are given in Table 1.

## Raw Materials Chiefly Valuable for Nitrogen

## VEGETABLE PRODUCTS USED AS SOURCES OF NITROGEN

Seven official samples of castor pomace were examined. No deficiencies in nitrogen were found; some samples exceeded guaranties considerably.

Of seven official samples of cottonseed meal there were three showing deficiencies in nitrogen of more than 0.1 per cent but none exceeded 0.2 per cent.

No official samples of linseed oil meal were drawn but four samples were examined for purchasers.

Six purchasers' samples of castor pomace and 84 such samples of cottonseed meal were analyzed.

Analyses of official samples of castor pomace and cottonseed meal are given in Table 2.

## II. RAW MATERIALS CHIEFLY VALUABLE FOR PHOSPHORIC ACID

## SUPERPHOSPHATE

Superphosphate is a raw material of basic importance in the fertilizer industry. It is made by a process originated by Liebig in 1840. In the United States superphosphate is made by treating phosphate rock with sulfuric acid. The finished product contains 16 per cent of available phosphoric acid. "Double superphosphate" is a similar product made by so treating phosphate rock that practically all of the calcium is converted into mono-calcium phosphate. Double phosphate contains 32 per cent of available phosphoric acid.

Fifteen official samples of superphosphate and one of the 32 per cent grade (double superphosphate) were analyzed. All met or exceeded guaranties for available phosphoric acid except in one case. In that the deficiency was less than 0.2 per cent and not considerable.

Analyses are given in Table 3.

## PRECIPITATED BONE PHOSPHATE

Precipitated bone phosphate is a by-product in the manufacture of glue from bones. The phosphoric acid in this material is chiefly in the form of dicalcium phosphate.

One official sample was examined and the available phosphoric acid found to be considerably in excess of the guaranty. Three samples were examined for purchasers.

Analyses of the official samples are included in Table 3

## III. RAW MATERIALS CHIEFLY VALUABLE FOR POTASH

## POTASH SALTS

Six official samples of muriate of potash and three of sulphate of potash have been examined and all found to meet guaranties except in one instance, 5220, where a deficiency of 0.73 per cent was shown. One sample of muriate of potash was analyzed for a purchaser.

Analyses of official samples are given in Table 4.

## COTTONHULL ASHES

Cottonhull ashes are used to a considerable extent as a source of potash, especially in mixtures for tobacco. Three official samples were analyzed as follows:

5597. Olds and Whipple, Inc., Hartford; sample taken at the factory. Potash found, 41.06%, phosphoric acid, 2.11%.

5516. Apothecaries Hall Co., Waterbury; sample taken at the factory. Potash found, 41.96%, phosphoric acid, 2.83%.

5247. Ed. Eggert, Hartford; sample taken at the factory. Potash found, 42.38%; phosphoric acid, 2.48%.

Because of their variable composition cottonhull ashes are generally sold on a unit basis.

Forty-nine samples of this material were submitted by purchasers for analysis. Potash ranged from 22 to 43 per cent. Phosphoric acid varied between 1.8 and 6.3 per cent but was generally within the narrower limits of 2 to 3 per cent.

## IV. RAW MATERIALS CONTAINING NITROGEN AND POTASH

Four official samples of nitrate of potash and one of tobacco stem meal have been examined and the results are given in Table 5. Potash guaranties were met, but three samples were slightly below guaranties in nitrogen.

Ten samples of nitrate of potash, one of nitrate of potash and soda, and one of tobacco stems were examined for purchasers.

V. RAW MATERIALS CONTAINING NITROGEN AND PHOSPHORIC ACID

FISH, TANKAGE AND BONE

Seven official samples of dry ground fish were examined and all substantially met or exceeded guaranties. No evidence of adulteration with mineral forms of nitrogen was found. Twenty-four samples were analyzed for purchasers.

Analyses of official samples are given in Table 6.

Twelve official samples of tankage were analyzed. Three, 4332, 5221, and 5169 were bone and meat tankages low in nitrogen and high in phosphoric acid, but all met or exceeded their guaranties. Three other samples, 5201, 5189, and 5249, were considerably deficient in nitrogen and one of them, 5201, was low in phosphoric acid as well.

Analyses are given in Table 7.

Twenty official samples of ground bone were analyzed and thirteen were examined for purchasers. All official samples met or exceeded guaranties in nitrogen, but three 5179, 5654, and 5168 were deficient in phosphoric acid.

Two samples, 5582, Acme Guano Co. and 5212, Standard Wholesale Phosphate and Acid Works, contained large proportions of rock phosphate. There was also some tankage present which kept the mixture within the limits of nitrogen content usually found in bone. A mixture of rock phosphate, bone and tankage is not ground bone and should not be sold as such. The nitrogen of tankage is as valuable as that of bone; but while rock phosphate has proper uses as a fertilizer, it is not commercially as valuable as bone phosphate.

Analyses of official samples are given in Table 8.

## VI. MIXED FERTILIZERS

In this group there are 171 official samples of complete fertilizers, four supplying only nitrogen and phosphoric acid, and one supplying only phosphoric acid and potash, making a total of 176.

Eleven samples were examined for purchasers.

Analyses of official samples are given in Table 9. A general summary of this table is as follows:

Total number of samples .....	176
Samples deficient in:	
one item .....	32
two items .....	5
three items .....	0
Percentage of samples meeting guaranties in all respects	79
Total guaranties made .....	523
Guaranties not met:	
nitrogen .....	22
available phosphoric acid .....	5
potash .....	15
Percentage of guaranties met .....	92
Samples showing commercial deficiencies exceeding \$1.00 per ton .....	4
Percentage of samples showing deficiencies exceeding \$1.00 per ton .....	2.3

The proportion of samples substantially meeting guaranties has increased notably in recent years. In 1923 the proportion was only 55 per cent. It has increased gradually since then being 74 to 80 per cent since 1930; and this year it is again nearly 80 per cent.

The proportion of samples showing commercial deficiencies exceeding a value of \$1.00 per ton has decreased. In the period from 1923 to 1929 this proportion varied from 7 to 17 per cent; since 1930 it has not exceeded 3 per cent, and this year it is only a little over 2 per cent.

The samples showing commercial deficiencies in excess of \$1.00 per ton this year are as follows:

- No. 5345 Standard Wholesale Phosphate and Acid Works
- No. 5357 Summers Fertilizer Co.
- No. 5785 Summers Fertilizer Co.
- No. 5591 Synthetic Nitrogen Products Corp.

A summary showing the distribution of chemical deficiencies and the percentage of guaranties met in the past year is given in Table 10. The proportion of guaranties met over a period of years is of more significance than for any one year and, therefore, figures are given in the same table for the five year period 1930-1934 inclusive.

## QUALITY OF THE INSOLUBLE ORGANIC NITROGEN

The quality of the insoluble organic nitrogen in mixed fertilizers is judged by the so-called "activity" of that portion that is insoluble in water as measured by the alkaline and the neutral permanganate methods. Values of less than 50 per cent and 80 per cent by these respective methods is regarded as indicating nitrogen of inferior quality. Values less than these

have been found in ten samples this year, but in all cases the actual percentage of the insoluble was relatively small, and the percentage of water-soluble nitrogen plus the percentage of active insoluble organic nitrogen practically equalled or exceeded the total nitrogen guaranteed. Hence no question is raised on the matter of quality of the nitrogen.

## SPECIAL AND HOME MIXTURES

Twenty-two samples of special mixtures and of home mixed goods have been examined. Seven of these were sampled by the Station agent, the others by the mixers or the purchasers.

Analyses are given in Table 11.

VII. MISCELLANEOUS FERTILIZERS AND OTHER MATERIALS

SHEEP MANURE, ETC.

Nineteen official samples of sheep, cattle and poultry manures have been examined and analyses are given in Table 12. One sample was analyzed for a purchaser.

Sample 5324, Summers Venezuelan Goat Manure, was very wet when sampled and on the "as is" basis was below guaranty. When sampled, the material was in a dry place and there was no evidence that it had become wet while in storage there.

LIMING MATERIALS

Analyses of limestone and other liming materials are given in Table 13.

OTHER MISCELLANEOUS MATERIALS

Forty-one samples of miscellaneous materials have been examined for individuals. Most of these need no special notice but a few may be noted for reference purposes.

5254. **Garbage** from City Garbage Plant, Bridgeport, Nitrogen 2.63%, total phosphoric acid 4.09%, air-dry basis.

5848. **Muck** submitted by Water Works Dept., Southington. Water 83.60%, ash 0.81%, organic and volatile matter 15.59%, nitrogen 0.26%.

4666. **Star Fish**, submitted by E. W. Smith, Mt. Carmel. Water 62.00%, nitrogen 2.26%, phosphoric acid 0.40%, potash 0.28%. If dried, the fish supply about 155 lbs. of plant food to the ton.

5350. **Dried Star Fish**, submitted by F. R. Whitney, New Haven. Nitrogen 5.33%, phosphoric acid 0.99%, potash 1.10%. In the air-dry condition, as received, this material supplies about 148 lbs. of plant food to the ton.

4808. **Tobacco stalks**, ground, submitted by the Tobacco Sub-station, Windsor. Nitrogen 3.41%, phosphoric acid 0.84%, total potash 4.57%.

4092. **Digested Sewage Sludge**, submitted by the Sewer Commission, Greenwich. Water 64.00%, ash 17.31%, organic and volatile matter 18.69%, nitrogen 1.17%.

6061. **Activated Sewage Sludge** from New Canaan Plant submitted by LeRoy W. Van Kleeck, State Board of Health, Hartford. Water 20.44%; ash 36.80%; organic and volatile matter 42.76%. Total nitrogen 2.70%; insoluble organic nitrogen 2.48%; "active" insoluble organic nitrogen 1.35% (54.4% of total insoluble); total phosphoric acid 1.93%; "available" phosphoric acid 1.73%; potash 0.12%.

6165. **Peanut shells**, submitted by Department of Soils. Nitrogen 1.42%; phosphoric acid 0.25%; potash 0.65%.
