VIRGIL L. CHURCHILL

Virgil L. Churchill, a valued member of the Station staff for 46 years, died on March 22, 1941.

As sampling agent for this department he was well known to farmers and to manufacturers and dealers of the fertilizer and feed industries of the State on whom he called regularly, taking official samples of their goods for analysis by the Station.

Three features are essential in any plan of inspection and analysis, and they are all equally important. The field sample must be representative of the stock examined; the analysis must be accurate; and the results must be interpreted accurately. Mr. Churchill knew the importance of his part in this program. He did his work faithfully and well, without undue show of authority; and always with consideration for the interest and convenience of those whose premises he visited.

A plain, dependable and good man, Mr. Churchill won the confidence, the trust and the friendliness of all with whom he had to deal. It is a tribute to him as a man and as a public servant that he will be missed by many — and remembered so long.

COMMERCIAL FEEDING STUFFS

REPORT OF INSPECTION

1940

E. M. BAILEY

THE FEED LAW

THE statute relating to concentrated commercial feeding stuffs imposes upon the Station (1) all duties incidental to the annual registration of feeds offered for sale in the State; (2) the collection of samples for inspection and analysis; (3) the examination of all samples so collected; (4) the preparation and publication of a bulletin summarizing the results of inspection and giving other pertinent information; and (5) joint responsibility with the Dairy and Food Commissioner for rules and regulations for carrying out the provisions of the law.

The enforcement provisions of the statute are delegated to the Dairy and Food Commissioner.

The following regulations were issued by the Director of this Station and the Dairy and Food Commissioner in May, 1939, superseding those issued in Bulletin of Immediate Information No. 60, dated June, 1927.

REGULATION 1. FEEDS NOT CLASSED AS CONCENTRATED

COMMERCIAL FEEDING STUFFS

(SEC. 4717)

It is held that the law exempts from classification as concentrated commercial feeding stuffs, and, therefore, from registration: (1) roughages such as hays, straws, corn stover and ensilage; (2) whole grains and mixtures thereof; (3) meals made from whole grains when not mixed with other materials or with each other; (4) feed ground from whole grain and sold by the manufacturer directly to the consumer; and (5) feed mixed according to a formula furnished by the consumer, for his own use.

Clause (4), above, refers to feed ground from materials furnished by the consumer. Under clause (5), above, feed is regarded as "mixed to order" and it must be so labelled together with a statement of net weight, the name of manufacturer and the name of the customer. The formula must be stated; the analysis **need not** be

given. Such feed must be sold only to the customer for whom it was mixed; if sold to others it becomes a regular brand subject to registration and other provisions pertaining to feeds in general. The suggested form of label for feed sold under clause (5) is:

- (1) Net weight
- (2) Kind of feed (State kind of feed, e.g., "horse feed", "dairy feed", "poultry mash", without private brand name or trademark)
- (3) Mixed to order for
(Name of customer)
- (4) Formula (give open formula)
- (5) Name of manufacturer

REGULATION 2. METHOD OF LABELLING (SEC. 4718)

All concentrated commercial feeding stuffs, other than vitamin D carriers, must be labelled either by a statement printed on the bag or upon a properly attached tag; in the case of concentrated feeding stuff sold in bulk, a certificate which shall contain the information otherwise required to appear upon the bag or upon the tag, may be issued by the dealer in lieu thereof.

The use of wire or any metal in affixing tags is prohibited by law.

The law requires a statement of (1) the net weight of the feed contained in the package; (2) the name, brand or trademark under which the feed is sold; (3) name and address of the manufacturer or importer; (4) the minimum percentages of (a) crude protein and (b) crude fat, and the maximum percentages of (c) crude fiber contained in the feed; (5) the separate ingredients of which the food is composed.

While the law requires only a statement of the items enumerated above, no objection will be raised to more complete statements of chemical composition or formula.

REGULATION 3. CONCERNING VITAMIN D CARRIERS

Vitamin D carriers are required to be registered in the same manner and under the same conditions as obtain for feeds in general.

Information to be given on labels and in applications for registrations is (1) name of product; (2) vitamin D potency in terms of A.O.A.C. chick units per gram; (3) name and address of manufacturer, distributor or other person responsible for the product; and, (4) on the label, a statement of net weight or volume.

The A.O.A.C. chick units is the vitamin D activity produced by one U.S. Pharmacopoeia unit of vitamin D from the U.S.P. "Reference Cod Liver Oil", determined by the method of assay adopted by the Association of Official Agricultural Chemists.

Cod liver oils containing less than 85 A.O.A.C. chick units of vitamin D per gram are not acceptable for registration.

REGULATION 4. CONCERNING COTTONSEED MEAL, ETC.

Cottonseed meal, linseed meal, soybean meal, and other vegetable feeds that are sold as fertilizer, are required to be registered under the provisions of the fertilizer law in addition to registration as feeds. If sold exclusively for one or the other of these purposes, the articles may be registered only under the law which applies.

For such of these articles as are used for fertilizer purposes chiefly or entirely as sources of nitrogen, only nitrogen (or protein) need be declared in the application for registration as fertilizer; and the tags or labels generally attached to such articles when intended for feeding purposes will be acceptable for them when sold as fertilizer.

REGULATION 5. DUTIES OF MANUFACTURERS, JOBBERS AND DEALERS WITH REFERENCE TO REGISTRATION
(SEC. 4719)

All concentrated commercial feeding stuffs, including vitamin D carriers, must be registered with the Connecticut Agricultural Experiment Station annually on January 1, or before they are offered for sale. Registration blank forms are supplied by the Station.

Manufacturers, jobbers or individuals shipping feeds into Connecticut will be expected to register their brands and pay the necessary fees thereon. Connecticut dealers should assure themselves that the brands they handle are properly registered and labelled. In case the manufacturer or jobber outside the State neglects or refuses to register, the dealer who handles such feeds will be held responsible for such registrations, registration fees and other legal requirements.

Dealers within the State who mix their own brands are responsible for the registration and proper labelling thereof.

REGULATION 6. DEFINITIONS OF TERMS USED IN THE LAW,
AND OF OTHER TERMS

Person. The term "person" is accepted as defined in General Statutes, Section 2432; it imports the singular or the plural as the case demands; and includes corporations, companies, societies and associations.

Importer. The term "importer" is defined in the act.

Brand. It is held that a distinct brand name, or a distinct analysis, constitutes a distinct brand.

Definitions for Feeding Stuffs. The definitions and standards for feeding stuffs adopted from time to time by the Association of Feed Control Officials of the United States are accepted as official in carrying out the provisions of this law; and the rules and regulations as adopted by that association are accepted as far as possible and when not inconsistent with the Connecticut statutes.

REGULATION 7. METHODS OF ANALYSIS
(SEC. 4718)

The methods of analysis employed shall be those prescribed by the Association of Official Agricultural Chemists, wherever such methods have been adopted for the determinations desired.

REGULATION 8. CONCERNING MEDICATED FEEDS
AND MINERAL MIXTURES

The law does not include medicated products used as "conditioners" for stock and poultry, and which consist essentially of substances possessing or claimed to possess, medical or condimental properties; nor does it include products consisting of supplemental minerals.

REGISTRATIONS

Late Registrations for 1939

To the brands registered for 1939 in our last report should be added:

St. Albans Grain Co., St. Albans, Vt.

Wirthmore Special Broiler Feed

For the period January 1, 1940 to December 31, 1940

For the period January 1, 1940, to December 31, 1940, 186 firms registered 1,208 brands of feeding stuffs; and 16 firms registered 25 brands of vitamin D carriers:

As required by statute the registrations are listed as follows:

Acme-Evans Co., Indianapolis, Ind.

Acme Calf Meal
Acme Hog Fattener
Acme 18% Pig Meal
Acme Sifted Cracked Corn
Acme Turkey Starting and Growing Mash
Producer Horse Feed

INSPECTION

For the year 1940 a total of 1,815 samples of feeding stuffs and related materials were examined. They are classified as follows:

Concentrated feed stuffs, official samples	854
Miscellaneous feeds examined for individuals	152
Feeds and other materials examined for poisons	73
Pasture grass samples and other fodder materials from Storrs	680
Vitamin D carriers	56
Total	1,815

Samples examined for the Experiment Station at Storrs are in connection with investigations carried on by the Agronomist of that Department and are not for discussion here.

A summary of the results of the inspection and analysis of the official samples of commercial feeding stuffs, other than cod liver oils, is as follows:

Total number of samples	854
Samples deficient in:	
one item	73
two items	4
three items	1 78
Percentage of samples meeting guaranties in all respects	91
Total guaranties made	2,546 ¹
Guaranties not met:	
protein	28
fiber	18
fat	38 84
Percentage of guaranties met	97

Microscopic examination of all mixed feed samples was made; no significant contamination with weed seed was found and the ingredients were substantially as claimed.

Analyses are given in Table 1.

Vitamin D Carriers

R. B. HUBBELL AND E. M. BAILEY

Vitamin D carriers have been included in our feed inspection since 1937. The samples tested are seldom taken from original unopened containers but from those being drawn upon for mixing purposes, or for dispensing in small quantities. Under such circumstances the manufacturer may hold that he cannot accept responsibility for the identity or integrity of the oil. On the other hand, the sample taken represents the article in current use in feeds being mixed at the time, and the article received by the customer who purchases in small quantities for home mixing.

¹Sixteen samples with only two guaranties.

Samples are tested according to the procedure adopted by the Association of Official Agricultural Chemists, and the purpose of the test is to check the declared unitage of vitamin D under which the oils or other D carriers are sold. Results are evaluated on the basis of composite bone ash figures for experimental groups of chicks. Test groups of chicks are fed on a standard basal ration plus the D carriers under test in comparison with control groups fed on the same basal ration plus standard reference oil of known D unitage. The dosage of oil or other D carrier under test is calculated on the assumption that the carrier contains the unitage of vitamin D claimed for it.

Samples are rated as satisfactory if results indicate that the unitage claimed is met or exceeded; and they are rated "below guaranty" if the indications are clear that the potency is definitely less than that claimed. Present experience does not justify too strict an interpretation of results and the classification "passed" is made for borderline samples. Samples below guaranty are checked by a second test before a report is made. Results are reported to the manufacturer or distributor and to the local dealer whose stock was sampled, which is the procedure followed for feeds in general in the course of regular inspection.

SUMMARY OF INSPECTION OVER FOUR-YEAR PERIOD

Year	Samples tested	Samples rated as			Percent below Guaranty
		Satisfactory	Passed	Below Guaranty	
1937	44	27	4	13	30
1938	55	42	5	8	15
1939	45	31	11	3	7
1940	56	20	20	16	29

The proportion of samples found below the D unitage guaranteed is greater for the past year than in the two previous years. The reason is not altogether clear, but it is fair to conclude that changing sources of supply of vitamin D oils, due to unsettled market conditions, are largely responsible, because adequate control on the part of manufacturers has been more difficult under such circumstances.

Results are given in Table 2.

Materials Examined For Poisons

Of 73 specimens examined for poisons, 14 were feeds or fodder materials. No poisons were found in any of the materials except in one case. Sample 6297, corn (mixed with some grass and soil) that was suspected to having caused the illness of hogs, contained a considerable amount of lead. The remaining 59 samples were stomach contents or organs of animals, in 23 of which poisonous substances of possible or probable significance were found.

In the summary given below are the poisonous or other foreign materials found by analysis, and the number of specimens in which each was present. The examinations are usually supplementary to investigations by others and the significance of our findings has to be considered in connection with conditions and circumstances that are not always a part of our records. Larger amounts of lead are

usually associated with circumstances in which paint or spray materials were accessible to the animals. The finding of arsenic usually reveals the likelihood of access to spray materials, unless malicious poisoning is indicated. Cyanides disappear from animal tissues relatively soon and this poison may escape detection unless examination is made promptly. The significance of small amounts of lead is doubtful, but the frequency with which it is found is of interest. The large amounts of copper found in two specimens is unexplained.

Poisonous plant principles are generally not satisfactorily detected by chemical tests. Water hemlock was undoubtedly the cause of poisoning in one case investigated, based on inspection of the pasture. In another case laurel leaves were found in the specimen submitted; and the color test for andromedotoxin¹, a poisonous principle in laurel, was positive.

SUMMARY OF SPECIMENS EXAMINED FOR POISONS

Poison or foreign material	No. of specimens	Remarks
Lead	3	Goat, stomach contents, 307 p.p.m.; calf, stomach contents, 68.4 p.p.m.; liver, 9.6 p.p.m.; calf, kidney, 41.8 p.p.m.
Copper	1	Deer, liver, 109 p.p.m.
Lead and copper	1	Deer, stomach contents, lead 44 p.p.m.; copper, 952 p.p.m.
Lead and antimony	3	Cow, stomach contents, lead and antimony in considerable quantity.
Lead and zinc	1	Vomitus, lead and zinc in quantity.
Lead and arsenic	10	Stomach contents, etc., lead 5.1 to 132 p.p.m.; arsenic, 4.8 to 78 p.p.m.
Plant poisons	2	Water hemlock by inspection of pasture. Laurel leaves found in one specimen.

Miscellaneous

One hundred and fifty-two samples of commercial feeds and fodder materials have been examined for State institutions, dairymen and others during the year.

Four samples of fish meal were analyzed for free fatty acid contents. The analyses are as follows:

No.	7132	7992	7993	8209
	%	%	%	%
Moisture	7.49	8.00	7.18	5.70
Ash	27.80
Protein (N×6.25)	55.88	65.81	58.88	55.75
Fat	7.58	6.94	6.55	9.21
Salt (NaCl)	1.00
Free fatty acid, % in fat	4.39	15.60	42.40	14.80
Free fatty acid, % in meal	0.33	1.08	2.77	1.36

Definitions and standards adopted by the Association of American Feed Control Officials fix a limit for salt content in fish meal and fish residue meal at 3 percent (or 7 percent if the amount in excess of 3 percent is a part of the brand name). No limit is fixed for free fatty acids.

Sample 8765 was "salt lick". It contained 74 percent of salt with undetermined amounts of iron, copper, iodine, calcium, phosphate, carbonate and sulphur. Other minerals, if present, were not tested for.

¹Peterson, Haines and Webster, p. 771.
