COMMERCIAL FEEDING STUFFS

Report for 1968 and 1969

J. Gordon Hanna

This feed report is divided into three tables. The number of samples from each manufacturer analyzed for protein, fat and fiber; the number of deficiencies for each; and the average per cent of claims for each component are listed in the first table. Because the fiber claims are maxima, the values for per cent of claims are less than 100 if the guarantees are met. Similar data for vitamin carriers are listed in the second table and for medicants in medicated feeds in the third table.

The deficiencies noted are based on tolerances of 0.75 per cent for protein and fiber, 0.25 per cent for fat, and 20 per cent guarantee for drugs.

Analytical work was done by Helen Kocaba, Werner Mueller, William Glowa, Sherman Squires, and Raymond West; biological assays by Lester Hankin, Mary Ann Rogers, and George Smith; and microscopic examinations by Lois Hornig. Raymond West also handled the computer operations. Richard Nichols performed the sampling.

COMPLIANCE OF 1968 & 1969 FEED SAMPLES WITH GUARANTEES

Manufacturer	No. of Samples	No. of guarantees				Samples deficient			Average % of claims
