FOOD

FROM CONNECTICUT
MARKETS AND FARMS

1971

J. GORDON HANNA

The 76th Report on
FOOD FROM CONNECTICUT MARKETS AND FARMS
1971

J. Gordon Hanna, Chief Chemist

Since 1896 annual bulletins have been published by this Station showing the examination results for food offered for sale in Connecticut. Such publications of the data for open market purchases are an effective deterrent to fraud and deception. Consumers are invited to use this information to help them compare and then select the most reliable brands and suppliers.

Connecticut towns and dealers from which samples of food have been collected are arranged in alphabetical order. The results of the analyses of the samples are shown and any deficiencies noted. The purpose of this arrangement is to make the information concerning the brands of food and the dealers in the reader's immediate vicinity readily available for assessment of relative reliabilities.

Where historical data over the last eight years is available for the dealers represented in this bulletin, the total number of samples analyzed over this period and the number of such samples found to be objectionable in one or more ways are tabulated. However, it should be understood that completely random sampling is not implied. Many of the food samples were collected because they were already suspect either by inspectors or by consumers. The result is that the ratio of the number of samples deficient to the total number examined is probably higher than it would be if the sampling had been done randomly.

Statute authority for the collection of samples and the prosecution of violators rests with the Commissioners of the Department of Consumer Protection and of the Department of Agriculture. Only officially taken samples submitted by inspectors from these departments are included in this bulletin. The analytical results have been made available to the Commissioners as soon as they are obtained throughout the year to aid them in the enforcement activities. This Station makes no prosecution of violators.

Not listed in this publication are 470 samples of the Connecticut milk supply submitted by the Commissioner of Agriculture for chlorinated pesticide residue analyses. None of these samples contained residues in excess of established tolerances. The significance of traces of residues in milk and other foods is evaluated by comparison with official levels established and periodically reviewed by the U. S. Department of Health, Education and Welfare. The established tolerance levels include at least a 100-fold safety factor based on physiological effects of each pesticide on test animals.

Analyses for adulteration or for conformance to label claims were in many cases the bases for deciding whether or not samples were acceptable. In other cases examinations of products for conformance to Connecticut and Federal definitions and standards of identity were used. Some of the latter requirements which normally do not prescribe label declarations of the ingredients may be of interest relative to the interpretations of the data given.

Frankfurters and bologna are limited to not over 3.5 per cent fillers (such as cereal, starch, flour, soy products and nonfat dry milk), 10 per cent added water, and 200 parts per million nitrite. Hamburg must not contain more than 30 per cent fat, and pork sausage not more than 50 per cent fat. The addition of sulfur dioxide (sulfite) to any meat product is forbidden. Egg noodles must contain at least 5.5 per cent solids of egg or egg yolk. Vitamin D milk is standardized to contain 400 USP units of vitamin D per quart. In general, a product is considered misbranded if the average of weight, measure or numerical count of the contents of six or more packages does not fully equal that stated on the package label.

The analytical work represented by this report was performed by Mrs. R. Barger, L. A. McLean and M. A. Rogers; Miss L. G. Hornig; and Messrs. R. G. Botsford, W. Glowa, L. Hankin, J. J. Hayes, L. G. Keirstead, G. Smith, S. R. Squires, R. E. West, and A. Wickroski. Clerical work and reporting were by Miss B. Lindgren. The bulletin was typed by Ms. C. J. Miller.

A portion of the cover page, and the letter of transmittal of the first Station food report appears on the back cover of this Bulletin.

ANSONIA

Castle Beverages, 105 Myrtle Ave.

BS-83 Black Cherry Soda, Dietary Beverage. Fat, 0.02% (claimed, no fats); protein, 1.17% (claimed, no protein); carbohydrates, none found (claimed, 1.12% or less); calories per ounce, 1.4 (claimed, 1.25 or less); saccharin, 0.023% (claimed, less than 0.025%).

Deficiency: Excessive protein relative to claim.

BS-84 Root Beer, Dietary Beverage. Fat, 0.02% (claimed, no fats); protein, 0.91% (claimed, no protein); carbohydrates, 0.17% (claimed, 1.12% or less); calories per ounce, 1.1 (claimed, 1.25 or less); saccharin, less than 0.02% (claimed, less than 0.025%).

Deficiency: Excessive protein relative to claim.

BS-85 Orange Soda, Dietary. Fat, 0.03% (claimed, no fats); protein, 1.03% (claimed, no proteins); carbohydrates, none found (claimed, 1.12% or less); calories per ounce, 1.2 (claimed 1.25 or less); saccharin, less than 0.02% (claimed, less than 0.025%).

Deficiency: Excessive protein relative to claim.

BS-104 Dietary Root Beer. Amino acids (glycine), 0.8g per 100g.

Deficiency: Contains an undeclared ingredient.

BS-105 Dietary Cola. Amino acids (glycine), 0.9g per 100g.

Deficiency: Contains an undeclared ingredient.
