Analysis
of Commercial
Fertilizers 1995

BY MARY JANE INCORVIA MATTINA

*Bulletin 935
May 1996*

From January 1, 1995 through December 31, 1995 the Department of Analytical Chemistry analyzed 197 fertilizer samples to determine that the label guarantee on the product is in compliance with State of Connecticut Regulations. Determinations of the macronutrients, nitrogen, phosphorus (as P_2O_5) and potassium (as K_2O), as well as a large number of micronutrients were made.

Forty-two different manufacturers were represented in this year's survey. Of the 197 samples submitted for analysis, 64 (32%) were reported out as "unsatisfactory." A sample is considered to be unsatisfactory if the value for a parameter is below the guaranteed value by more than the permissible percentage established by the Association of American Plant Food Control Officials. Specifically, 29 (14.7%) samples were deficient in nitrogen, 7 (3.5%) were deficient in phosphorus, and 21 (10.6%) were deficient in potassium. Thirteen samples were found to be deficient only in one or more of the micronutrients, but not in the macronutrients. A deficiency in a parameter is indicated by a "-" sign next to the "%F" value of the macronutrients in Table 1 or one of the miscellaneous micronutrients in Table 2.

The samples were collected by Alton VanDyke and John Schneider of the Connecticut Department of Agriculture. The analyses were performed by Craig Musante and Mamie Pyles under the supervision of Dr. David Stilwell.

The Connecticut Agricultural Experiment Station is an Equal Opportunity, Affirmative Action Employer. Persons with disabilities who require alternate means of communication of program information should contact the Station Editor at (203) 789-7223 (voice) or 789-7232 (FAX) or caesadm@caes.state.ct.us (e-mail).

The Connecticut Agricultural Experiment Station, founded in 1875, is the first experiment station in America. It is chartered by the General Assembly to make scientific inquiries and experiments regarding plants and their pests, insects, soil and water, and to perform analyses for State agencies. The laboratories of the Station are in New Haven and Windsor; its Lockwood Farm is in Hamden. Single copies of bulletins are available free upon request to Publications; Box 1106; New Haven, Connecticut 06504. ISSN 0097-0905
