

W. S. Thornber

Agric. Expt. Sta.

2/1/07 - 2 #17896 *Castanea mollissima*

1/5/07 - 6 do. do.

1934 (through Mielke, his letter 2/13/34)

"Mostly still alive but in very poor condition --- mainly clumps of sprouts up to 25 ft in height"

"Some of the trees have had more or less good crops of burrs each year but the seeds within do not develop."

I have taken it for granted that the season was too short here for the ripening of the fruit"

E. H. Steffen, Dept. of Forestry & Range Management
