Project Manager - Transmission Business - Projects

October 20, 2008

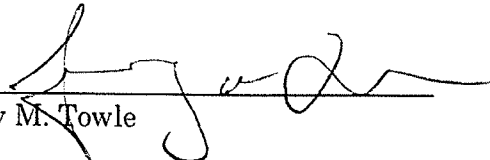

**NOTICE TO WATER COMPANIES REGARDING THE CONNECTICUT
VALLEY ELECTRIC TRANSMISSION RELIABILITY PROJECTS**

The Connecticut Light and Power Company (CL&P) is providing notice of its intent to apply to the Connecticut Siting Council on or about October 20, 2008 for Certificates of Environmental Compatibility and Public Need for the Connecticut Valley Electric Transmission Reliability Projects. These projects consist of: (a) the Connecticut portion of the Greater Springfield Reliability Project and (b) the Manchester to Meekville Junction Circuit Separation project. The Connecticut portion of the Greater Springfield Reliability Project consists of: (i) a proposed 345-kV electric transmission line extending from the North Bloomfield Substation in Bloomfield, Connecticut the Massachusetts / Connecticut state line between Agawam, Massachusetts and Suffield, Connecticut, together with associated improvements to the North Bloomfield Substation; and (ii) potentially also a portion of a 345-kV transmission line between Ludlow, Massachusetts and Agawam, Massachusetts that would be within the State of Connecticut. The Manchester to Meekville Junction Circuit Separation Project consists of the modification of existing 115-kV and 345-kV transmission circuits in Manchester, Connecticut.

This notice is provided pursuant to section V of the Connecticut Siting Council's "Application Guide for Terrestrial Electric Transmission Line Facilities" dated August, 2007.

Details regarding the proposed projects are set forth in the enclosed notice.

THE CONNECTICUT LIGHT AND POWER COMPANY

By: 
Jeffrey M. Towle

**Notice of Application by The Connecticut Light and Power Company for Approval
of Electric Transmission Lines in the Connecticut Valley Electric Transmission
Reliability Projects**

Pursuant to the Application Guides for Terrestrial Electric Transmission Line Facilities of the Connecticut Siting Council (adopted August 2007), notice is hereby given that The Connecticut Light and Power Company (CL&P) will on or about October 14, 2008, submit an application to the Connecticut Siting Council seeking a Certificate of Environmental Compatibility and Public Need for the Connecticut Valley Electric Transmission Reliability Projects. These projects consist of: (a) the Connecticut portion of the Greater Springfield Reliability Project (GSRP) and (b) the modification of an existing electric transmission line along an existing right-of-way between the Manchester Substation and Meekville Junction in Manchester, Connecticut (MMP).

The GSRP includes a proposed new 345-kV overhead electric transmission line between CL&P's North Bloomfield Substation in Bloomfield, Connecticut, and a substation in Agawam, Massachusetts, owned by the Western Massachusetts Electric Company (WMECO). The Connecticut portion of this line would be approximately 12 miles long, and would extend from the North Bloomfield Substation to the state border between Suffield, Connecticut, and Agawam, Massachusetts. The GSRP will also require expansion of the North Bloomfield Substation. Finally, the GSRP may also include the Connecticut portion of a possible new 345-kV line between substations in Agawam, Massachusetts and Ludlow, Massachusetts. If constructed, approximately 5.4 miles of this Agawam – Ludlow line would be located on the Connecticut side of the Massachusetts/Connecticut border, in the towns of Suffield and Enfield.

The GSRP is proposed to improve the reliability of the electric system in the areas of Springfield, Massachusetts and north-central Connecticut so as to comply with national and regional reliability criteria. It is designed to work together with other transmission projects in Connecticut, Massachusetts, and Rhode Island (known as the New England East-West Solution or "NEEWS" projects) to address regional system reliability problems.

The Application will include a description of the Connecticut portion of the proposed new North Bloomfield – Agawam 345-kV transmission line, which is proposed to be entirely overhead and would be built in Connecticut primarily on unused portions of existing CL&P right-of-way. (In two areas, the existing right-of-way is narrower than would be required and must be widened.) The Connecticut portion of the proposed project is located in the towns of Bloomfield, East Granby, and Suffield. The application will also describe potential variations to portions of the route of the North Bloomfield – Agawam line, both overhead and underground. The potential underground cable routes would pass through portions of East Granby and Suffield, within existing roads and/or CL&P's existing right-of-way. The Application will also describe the required expansion of the North Bloomfield Substation, located near the intersection of Hoskins and Tariffville Roads in Bloomfield, to accommodate additional equipment.

The Application will also seek contingent approval of a portion of a potential 345-kV line route between WMECO's Ludlow and Agawam Substations. Such approval will be sought in the event that the Massachusetts Energy Facilities Siting Board orders construction of that line on an alternative "southern" route between those substations, rather than on the "northern" route proposed by WMECO. Since the northern line would be entirely within the Commonwealth of Massachusetts, it would not require any approval of the Connecticut Siting Council. However, since a portion of the southern Agawam – Ludlow line would be located in Connecticut, that portion of the route would be owned by CL&P and would require approval from the Connecticut Siting Council. CL&P will present to the Siting Council both an all-overhead line and route for the Connecticut portion of the Agawam – Ludlow line and an underground line variation to a portion of that route.

The towns of Simsbury and Somers are not traversed by the preferred or alternate routes, but do have a town boundary within 2,500 feet of the right-of-way.

MMP is proposed to improve the reliability of the electric transmission system in north-central Connecticut so that it will be able to reliably accommodate power flows on that system that the Greater Springfield Reliability Project (GSRP) will enable.

The Application will concern the separation of a 345-kV circuit segment and a 115-kV circuit segment currently supported by a common set of support structures, along a right-of-way between CL&P's Manchester Substation and Meekville Junction, for a distance of approximately 2.2 miles within Manchester. After the separation, a 345-kV circuit segment would remain on the line of structures that currently support both circuits; and the 115-kV circuit segment would be replaced on a new set of support structures between this line and a double-circuit 115-kV line on the right-of-way. The Manchester Substation is located at the intersection of West Center Street and Olcott Street. The proposed route travels north-northwest along the existing CL&P right-of-way, crosses I-84, and ends at Meekville Junction, which is located behind Mary Drive. The town of South Windsor is not traversed by right-of-way where the proposed construction would take place, but the Manchester – South Windsor town boundary is within 2,500 feet of the right-of-way.

Copies of the Application will be available at the municipal offices of the towns of Bloomfield, East Granby, Enfield, Granby, Manchester, Simsbury, Somers, South Windsor and Suffield, Connecticut.

October 20, 2008

**NOTICE REGARDING THE CONNECTICUT VALLEY ELECTRIC
TRANSMISSION RELIABILITY PROJECTS**

To: Community organizations, including but not limited to Chambers of Commerce, land trusts, environmental groups, trail organizations, historic preservation groups, advocacy groups for the protection of Long Island Sound and river protection organizations

The Connecticut Light and Power Company is providing notice to community organizations, including but not limited to Chambers of Commerce, land trusts, environmental groups, trail organizations, historic preservation groups, advocacy groups for the protection of Long Island Sound and river protection organizations that may be within the watershed traversed by a proposed transmission line, of its intent to apply to the Connecticut Siting Council on or about October 20, 2008 for Certificates of Environmental Compatibility and Public Need for the Connecticut Valley Electric Transmission Reliability Projects. These projects consist of: (a) the Connecticut portion of the Greater Springfield Reliability Project and (b) the Manchester to Meekville Junction Circuit Separation project. The Connecticut portion of the Greater Springfield Reliability Project consists of: (i) a proposed 345-kV electric transmission line extending from the North Bloomfield Substation in Bloomfield, Connecticut to the Massachusetts / Connecticut state line between Agawam, Massachusetts, and Suffield, Connecticut, together with associated improvements to the North Bloomfield Substation; and (ii) potentially also a portion of a 345-kV transmission line between Ludlow, Massachusetts and Agawam, Massachusetts that would be within the State of Connecticut. The Manchester to Meekville Junction Circuit Separation Project consists of the modification of existing 115-kV and 345-kV transmission circuits in Manchester, Connecticut.

This notice is provided pursuant to section V of the Connecticut Siting Council's "Application Guide for Terrestrial Electric Transmission Line Facilities" dated August, 2007.

Details regarding the proposed construction are set forth in the enclosed notice.

THE CONNECTICUT LIGHT AND
POWER COMPANY

By: 
Jeffrey M. Towle

**Notice of Application by The Connecticut Light and Power Company for Approval
of Electric Transmission Lines in the Connecticut Valley Electric Transmission
Reliability Projects**

Pursuant to the Application Guides for Terrestrial Electric Transmission Line Facilities of the Connecticut Siting Council (adopted August 2007), notice is hereby given that The Connecticut Light and Power Company (CL&P) will on or about October 14, 2008, submit an application to the Connecticut Siting Council seeking a Certificate of Environmental Compatibility and Public Need for the Connecticut Valley Electric Transmission Reliability Projects. These projects consist of: (a) the Connecticut portion of the Greater Springfield Reliability Project (GSRP) and (b) the modification of an existing electric transmission line along an existing right-of-way between the Manchester Substation and Meekville Junction in Manchester, Connecticut (MMP).

The GSRP includes a proposed new 345-kV overhead electric transmission line between CL&P's North Bloomfield Substation in Bloomfield, Connecticut, and a substation in Agawam, Massachusetts, owned by the Western Massachusetts Electric Company (WMECO). The Connecticut portion of this line would be approximately 12 miles long, and would extend from the North Bloomfield Substation to the state border between Suffield, Connecticut, and Agawam, Massachusetts. The GSRP will also require expansion of the North Bloomfield Substation. Finally, the GSRP may also include the Connecticut portion of a possible new 345-kV line between substations in Agawam, Massachusetts and Ludlow, Massachusetts. If constructed, approximately 5.4 miles of this Agawam – Ludlow line would be located on the Connecticut side of the Massachusetts/Connecticut border, in the towns of Suffield and Enfield.

The GSRP is proposed to improve the reliability of the electric system in the areas of Springfield, Massachusetts and north-central Connecticut so as to comply with national and regional reliability criteria. It is designed to work together with other transmission projects in Connecticut, Massachusetts, and Rhode Island (known as the New England East-West Solution or "NEEWS" projects) to address regional system reliability problems.

The Application will include a description of the Connecticut portion of the proposed new North Bloomfield – Agawam 345-kV transmission line, which is proposed to be entirely overhead and would be built in Connecticut primarily on unused portions of existing CL&P right-of-way. (In two areas, the existing right-of-way is narrower than would be required and must be widened.) The Connecticut portion of the proposed project is located in the towns of Bloomfield, East Granby, and Suffield. The application will also describe potential variations to portions of the route of the North Bloomfield – Agawam line, both overhead and underground. The potential underground cable routes would pass through portions of East Granby and Suffield, within existing roads and/or CL&P's existing right-of-way. The Application will also describe the required expansion of the North Bloomfield Substation, located near the intersection of Hoskins and Tariffville Roads in Bloomfield, to accommodate additional equipment.

The Application will also seek contingent approval of a portion of a potential 345-kV line route between WMECO's Ludlow and Agawam Substations. Such approval will be sought in the event that the Massachusetts Energy Facilities Siting Board orders construction of that line on an alternative "southern" route between those substations, rather than on the "northern" route proposed by WMECO. Since the northern line would be entirely within the Commonwealth of Massachusetts, it would not require any approval of the Connecticut Siting Council. However, since a portion of the southern Agawam – Ludlow line would be located in Connecticut, that portion of the route would be owned by CL&P and would require approval from the Connecticut Siting Council. CL&P will present to the Siting Council both an all-overhead line and route for the Connecticut portion of the Agawam – Ludlow line and an underground line variation to a portion of that route.

The towns of Simsbury and Somers are not traversed by the preferred or alternate routes, but do have a town boundary within 2,500 feet of the right-of-way.

MMP is proposed to improve the reliability of the electric transmission system in north-central Connecticut so that it will be able to reliably accommodate power flows on that system that the Greater Springfield Reliability Project (GSRP) will enable.

The Application will concern the separation of a 345-kV circuit segment and a 115-kV circuit segment currently supported by a common set of support structures, along a right-of-way between CL&P's Manchester Substation and Meekville Junction, for a distance of approximately 2.2 miles within Manchester. After the separation, a 345-kV circuit segment would remain on the line of structures that currently support both circuits; and the 115-kV circuit segment would be replaced on a new set of support structures between this line and a double-circuit 115-kV line on the right-of-way. The Manchester Substation is located at the intersection of West Center Street and Olcott Street. The proposed route travels north-northwest along the existing CL&P right-of-way, crosses I-84, and ends at Meekville Junction, which is located behind Mary Drive. The town of South Windsor is not traversed by right-of-way where the proposed construction would take place, but the Manchester – South Windsor town boundary is within 2,500 feet of the right-of-way.

Copies of the Application will be available at the municipal offices of the towns of Bloomfield, East Granby, Enfield, Granby, Manchester, Simsbury, Somers, South Windsor and Suffield, Connecticut.
