RE: NT-2010 Interrogatories, Generators

1. If the facility has already been constructed, what versions of the NFPA standards were utilized?

CDECCA was declared commercially operable in 1988. A list of codes used during construction has been attached as Appendix 1 to our response. No documentation has been found with regard to NFPA codes that may have been utilized.

2. If the facility has yet to be constructed, what versions of the NFPA standards will be utilized?

Not applicable.

3. How would recommendation #6, "Recommendation as to adoption of codes" in the Thomas Commission Executive Report affect the facility?

Recommendation #6 is not expected to affect the facility, as no modifications to the existing natural gas piping or fire protection systems are anticipated. Should modifications become necessary in the future, the intent of the amended codes would be adapted.

4. How would the following codes affect construction or modification of the facility:
  - a. NFPA 37 (2010 edition);
  - b. NFPA 54 (2009 edition);
  - c. NFPA 54 Temporary Interim Amendment 09-3 (August 25, 2010);
  - d. NFPA 850 (2010 edition);
  - e. NFPA 853 (2010 edition);
  - f. ASME B31; and
  - g. ASME B31.1 Appendices IV and V.

The facility was declared commercially operable in 1988. The facility does not anticipate any modifications to the natural gas piping or fire protection systems. Should modifications become necessary in the future, the intent of the above codes would be adapted and the Maxim Power Corp. Management of Change program would be implemented. CDECCA has been insured by FM Global for property and equipment as well as business interruption insurance since 2007. FM Global considers the facility to be a highly protected risk.

5. What is useful lifespan of the natural gas piping/pipelines located within and to the facility?

The lifespan of the facility considered during design was likely 25 years, however, many power plants have a useful lifespan of 40 years. The useful lifespan of natural gas piping/pipelines depends on pipe stress levels, pressure surge events, temperatures, and

external corrosion. CDECCA plans to complete ultrasonic testing of critical areas of the natural gas piping system in 2011 to ensure ongoing integrity.

6. Would the natural gas piping/pipelines within and to the facility need to be replaced during the life of the facility?

No, replacement of the natural gas piping/pipelines is not anticipated during the life of the facility.

7. Do you foresee any circumstances that would require replacement of a section of natural gas piping/pipeline within and to the facility?

No, replacement of a section of the natural gas piping within and to the facility (from the point of demarcation, downstream) is not anticipated. CDECCA cannot comment on the piping/pipelines upstream of the demarcation point, which are owned by CNG.

8. If so, would a new section of natural gas piping/pipeline within and to the facility be installed and require cleaning?

Not applicable.

9. What type of material is the natural gas piping/pipeline within and to the facility composed of?

A detail of the pipe spec has not been found, however it is believed to be black iron pipe.

10. How many linear feet of natural gas piping/pipeline are located within and to the facility?

Approximately 880 linear feet of natural gas piping is located downstream of the demarcation point.

11. What is operating pressure (psig) of the natural gas piping/pipeline within and to the facility?

The operating pressure of the natural gas piping is 290-300 psig to the gas turbine and 125-150 psig to the duct burner and auxiliary boiler.

12. What is the nominal pipe size in inches within and to the facility?

The nominal size of the majority of the pipe (approximately 535 linear feet) within the facility is 6" schedule 40 pipe, above ground. There is approximately 35 linear feet of above ground piping which is 12" schedule 40 pipe, 235 linear feet of above ground piping which is 4" schedule 40 pipe, and 75 feet of below ground piping which is 12" schedule 40 pipe.

13. What is the length in feet of piping/pipeline that requires/required purging within and to the facility?

It is believed that all 880 linear feet of the aforementioned piping required purging prior to commissioning of the facility.
