	Deceased Identified By (Name)		Address (Street, Town, State)		Phone

INFORMANT(S)

CIRCUMSTANCES OF DEATH

The following circumstances were gathered from police personnel as well as personal observation. The decedent was originally called in as Unidentified and later was identified by fingerprints.

The decedent was a 41 year old male with a history of drug use who had active warrants for criminal activity. The decedent was recently witnessed waving a gun around. This was what prompted the most recent warrant and the traffic stop by Hartford Police. The decedent has a long history of violent tendencies and was estranged from his family. He has had arrests in the past for assault, burglaries, narcotics, and possession of machine guns.

The decedent was the driver of a Nissan Maxima registered to a female with the same last name. He had a passenger and they had been discussing the decedent having lost a lot of weight and a comment was made that the decedent may have a "drug sickness like AIDS".

The Hartford Police Street Crimes Unit was attempting to stop the decedent's vehicle at Capital Avenue and Park Street, but the vehicle fled onto the I-84 westbound ramp. The vehicle struck several other vehicles attempting to escape as there were construction vehicles on the ramp. At that point, the car was stopped. Plain clothes officers approached the vehicle and laid stop sticks under the front of the car. The car was attempting to jockey back and forth to get away. Once the car stopped, the passenger got out and surrendered. The car had a flat front tire.

The decedent exited the vehicle and lunged towards Hartford Police Officers attempting to gain one of the officer's weapons. The decedent was given verbal commands by the officers; the decedent failed to comply. The decedent was allegedly subdued at one point with non lethal action, but he was able to gain control of one of the officer's guns. He allegedly broke the holster to gain access to this gun. The officer made the others aware that the decedent had his gun. Another officer fired a weapon and struck the decedent. He reportedly fired 3 times.

Per the passenger in the car, the decedent said "I am ready to die, ready to die" as he was getting out of the car.

19-13419-Zaporta, Alphonso

The decedent was supine on the ground near the car and he was handcuffed after he was shot. A bullet was near his body. Three shell casings were noted. Pieces of a bullet jacket were nearby as well.

An empty bottle of alcohol and a loaded handgun were on the driver's side floor.

Photographs were taken and the body was transported to OCME by OCME personnel.

EXTERNAL EXAMINATION	Deceased Examined At	On (Date)
	Roadway, Interstate 84 West (On Ramp), Near Capital Avenue, Hartford, CT 06106	7/27/2019

The decedent is a black male appearing his stated age of 41 years. He has black hair, brown eyes, and natural teeth. He is wearing a shirt, pants, underwear, socks, and shoes. Tattoos are noted on his chest and arms. Tattoos are noted near his left eye as well. He has scars on his torso and back.

Keys for a different car and change are removed from the decedent's pocket. Cigarettes, a credit card, and 2 hats are near the decedent.

The decedent smells strongly of alcohol.

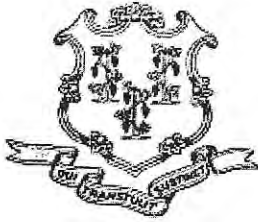

Injuries are noted to the decedent's left ear, center forehead, and 2 on the back of his head at different locations (one more central and one to the left). Abrasions are noted on the back of the decedent's neck and on his left forearm and elbow.

Significant deformities are noted to the decedent's face and skull. Contusions are noted on his eyes. His teeth appear damaged.

Rigor is difficult to break in all muscles and livor is blanchable with moderate force.

CERTIFICATION	I certify that I made an external examination of the deceased on the date shown.

M.E. CASE NUMBER: 19-13419-Zaporta, Alphonso

Date of Death: 07/26/2019

County of Death: Hartford

Autopsy Performed By: Gregory A. Vincent, M.D.

Time of Death: 09:27 P.M.

City of Death: Hartford

Autopsy Date: 07/28/2019

FINAL DIAGNOSES

- I. Gunshot Wounds of Head (3)
 - A. Comminuted Skull Fractures
 - B. Perforation and Penetration of Brain
 - C. Projectile Fragments Recovered
- II. Blunt Injuries of Torso
 - A. Cutaneous Contusions and Abrasions
- III. Blunt Injuries of Extremities
 - A. Cutaneous Contusions and Abrasions
- IV. Hypertensive and Atherosclerotic Cardiovascular Disease
 - A. Cardiac Hypertrophy (460 gm, Slight)
 - B. Left Ventricular Hypertrophy, Slight (1.5 cm)
 - C. Coronary Artery Atherosclerosis, Slight
 - D. Aortic Atherosclerosis, Slight

CAUSE OF DEATH:

GUNSHOT WOUNDS OF HEAD (3)

MANNER OF DEATH:

HOMICIDE (SHOT BY POLICE)

M.E. CASE NUMBER: 19-13419-Zaporta, Alphonso

REPORT OF AUTOPSY

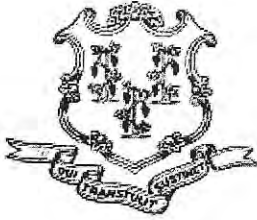

I hereby certify that I, Gregory A. Vincent, M.D., Associate Medical Examiner, have performed an autopsy on the body of Alphonso Zaporta on the 28th of July, 2019, commencing at 10:00 A.M. in the mortuary of the Office of the Chief Medical Examiner of the State of Connecticut. This autopsy was performed in the presence of Dr. Nunez and attended by Detectives Bennett and DiCocco of the Eastern District Major Crime Division of the Connecticut State Police.

EXTERNAL EXAMINATION:

The body is received in the supine position in a white plastic body bag. The body is of a well-developed, well-nourished, average framed, 5' 9", 163 lb lightly-pigmented Hispanic man (Body Mass Index: 24.1) whose appearance is consistent with the given age of 41 years. The straight black scalp hair measures up to approximately $\frac{3}{8}$ ". The mustache and beard measure up to $\frac{1}{8}$ " and $\frac{1}{2}$ ", respectively. The nose and facial bones are palpably intact. The eyes have brown irides and the conjunctivae are without jaundice. The oral cavity has natural dentition with moderate hygiene. The chest and back are unremarkable. The abdomen is soft and flat. The external genitalia are of a normal circumcised adult man. The anus is unremarkable. The extremities are normally developed. There is a 4" x 1- $\frac{1}{4}$ " irregular hyperpigmented scar of the left forehead and side of the head. There is a 10" x 8" irregular hyperpigmented scar of the left chest extending onto the abdomen. There is a 1" x $\frac{1}{8}$ " hypopigmented, well-healed scar of the right back, a 1- $\frac{1}{2}$ " x $\frac{1}{2}$ " hyperpigmented mark of the lower left back, a 2" x $\frac{1}{8}$ " hypopigmented, well-healed scar of the dorsal right forearm, a 3- $\frac{1}{2}$ " x $\frac{1}{8}$ " hypopigmented, well-healed scar of the dorsal right forearm, a $\frac{1}{2}$ " x $\frac{1}{4}$ " hypopigmented, well-healed scar of the dorsal left hand at the base of the left fifth finger, and a $\frac{3}{8}$ " x $\frac{3}{8}$ " hypopigmented, well-healed scar of the ventral lateral left forearm. There is a 1" x $\frac{1}{2}$ " hypertrophic, hyperpigmented scar of the dorsal left thigh and a $\frac{3}{8}$ " x $\frac{1}{4}$ " hyperpigmented, well-healed scar of the dorsal right thigh. There is a 2- $\frac{1}{4}$ " x $\frac{1}{8}$ " dry brown indentation of the right lower back and a 2" x $\frac{1}{8}$ " dry brown indentation of the left lower back with a 2- $\frac{1}{4}$ " x $\frac{1}{4}$ " area of pallor in between. There is a circumferential dark brown discoloration of the left wrist measuring up to $\frac{1}{2}$ " in width.

There are the following professional monochromatic tattoos:

1. A spider web on the right elbow
2. A skull wearing a hood on the dorsal right forearm
3. "Solido Nation" with comedy and tragedy masks on the lateral right upper arm
4. "You Can Never Feel My Pain" written in gothic font across the clavicles
5. A skull wearing a clown nose on the lateral left upper arm
6. "Dustin" in gothic font on the dorsal left forearm
7. "Solid" on the dorsal left upper arm
8. Two tear drops lateral to the left eye

STATE OF CONNECTICUT
Office of the Chief Medical Examiner
11 Shuttle Road, Farmington, CT 06032

M.E. CASE NUMBER: 19-13419-Zaporta, Alphonso

POST-MORTEM CHANGES:

There is moderate symmetrical rigor mortis of the upper and lower extremities, neck, and jaw. Lividity is purple, fixed, and posterior. The body is cool to the touch.

THERAPEUTIC PROCEDURES:

There are appropriately placed electrocardiograph leads.

CLOTHING:

The body is clad in a black T-shirt, a pair of black pants, a pair of black sneakers, a pair of white socks, and a blue and white Nautica brand belt with a leather end and a white metal buckle. There is a yellow metal earring with a black stone on the left earlobe. There is a perforation of the midline of the back of the shirt below the collar. There are white metal handcuffs cuffing the hands behind the back.

INJURIES:

There are three gunshot wounds of the head and blunt injuries of the head, torso, and extremities. These injuries are described by body region for descriptive purposes only; no sequence is implied. All measurements are given in relation to the normal anatomic planes with the body in the supine position.

A. Perforating Gunshot Wound of Back of Head:

Entrance: There is a gunshot entrance wound of the posterior right head centered 2-1/2" below the top of the head and 7/8" right of the midline. It is a 1/4" x 1/4" punched-out wound without abrasion, fouling, or stippling of the adjacent skin.

Wound Track: After perforating the skin and soft tissues of the posterior right scalp, the bullet perforates and fractures the right occipital bone, creating a 3/4" x 3/4" fracture with internal beveling. The bullet then sequentially perforates the right occipital, parietal, and frontal lobes with marked hemorrhage along the wound track. There are fragments of yellow and grey metal recovered along the wound track. There are contusions of the white matter of the right frontal and temporal lobes, the mid brain, and the pons.

Exit: There is a gunshot exit wound of the left forehead centered 2" below the top of the head and 3/4" left of the midline. It is a 1-1/4" x 7/8" stellate wound without abrasion, fouling, or stippling of the adjacent skin. It overlies a 1" x 3/4" fracture of the right and left frontal bones with external beveling. There is patchy subscalpular and subgaleal hemorrhage of the overlying the scalp measuring up to 3".

Course and Direction: The course and direction of the bullet track is from back to front, right to left, and upward.

STATE OF CONNECTICUT
Office of the Chief Medical Examiner
11 Shuttle Road, Farmington, CT 06032

M.E. CASE NUMBER: 19-13419-Zaporta, Alphonso

B. Penetrating Gunshot Wound of Left Side of the Head:

Entrance: There is a gunshot entrance wound of the posterior left head centered 4- $\frac{1}{2}$ " below the top of the head and $\frac{7}{8}$ " left of the midline. It is a $\frac{3}{8}$ " x $\frac{3}{8}$ " punched-out wound without abrasion, fouling, or stippling of the adjacent skin. There is beveled subcutaneous tissue from the 3 o'clock to the 8 o'clock positions.

Wound Track: After perforating the skin and soft tissues of the posterior left head, the bullet perforates and fractures the left occipital bone creating a $\frac{3}{4}$ " x $\frac{3}{4}$ " perforation with internal beveling and comminuted fractures of the skull measuring up to 13". The bullet then sequentially penetrates the left occipital and parietal lobes and the brainstem. There is marked hemorrhage along the wound track. There are multiple fragments of yellow and grey metal recovered along the wound track. There is no gunpowder residue along the wound track.

Course and Direction: The course and direction of the bullet track is from back to front with indiscernible deviation in the anterior, superior, or left/right planes.

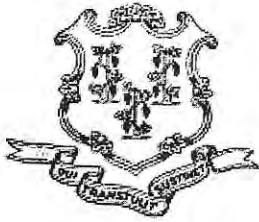

Projectiles: Four fragments of yellow metal and seven distorted fragments of dark grey metal are recovered from the brain and the inferior brainstem.

C. Graze Gunshot Wound of Posterior Left Head With Perforation of Left Ear:

There is an obliquely-oriented, 1- $\frac{1}{2}$ " x $\frac{1}{2}$ ", teardrop-shaped, pink-white graze wound of the inferior left back of the head centered 2- $\frac{1}{4}$ " left of the midline, 5" below the top of the head at the anterior end (nearest to the left ear) and 6" below the top of the head at the posterior end. There are tags of skin along the edges of the wound track, which point downward and to the right. There is a circumferential rim of irregular white abrasion measuring up to $\frac{1}{16}$ ". There is a $\frac{3}{8}$ " x $\frac{1}{2}$ " punched-out wound of the pinna of the left ear centered 5- $\frac{1}{2}$ " below the top of the head and 3- $\frac{1}{2}$ " left of the midline without abrasion, fouling, or stippling of the adjacent skin. There is contusion of the posterior left ear. The course and direction of the bullet track is back to front, right to left, and upward.

D. Blunt Injuries of Head: There is a $\frac{1}{2}$ " x $\frac{1}{8}$ " dark red laceration of the inner lower lip centered $\frac{1}{8}$ " left of the midline. The right central maxillary incisor is fractured. There is a $\frac{3}{4}$ " x $\frac{5}{8}$ " red abrasion of the chin centered 7- $\frac{1}{4}$ " below the top of the head and $\frac{1}{2}$ " right of the midline. There is a 1- $\frac{1}{4}$ " x $\frac{1}{2}$ " dry, dark red abrasion of the chin centered 7- $\frac{1}{2}$ " below the top of the head and $\frac{5}{8}$ " right of the midline. There are scant petechiae of the right bulbar conjunctiva. The skin, soft tissues, and bones of the neck are without injury.

E. Blunt Injuries of Torso: There is a 1- $\frac{1}{4}$ " x $\frac{1}{2}$ " brown contusion of the right chest. There is a 1- $\frac{1}{2}$ " x 1- $\frac{1}{2}$ " subcutaneous hemorrhage of the lower left back. There is patchy subcutaneous hemorrhage overlying the middle of the lower back.

STATE OF CONNECTICUT
Office of the Chief Medical Examiner
11 Shuttle Road, Farmington, CT 06032

M.E. CASE NUMBER: 19-13419-Zaporta, Alphonso

- F. UPPER EXTREMITIES:** There is a $\frac{7}{8}$ " x $\frac{1}{2}$ " red abrasion of the right elbow, a $\frac{1}{2}$ " x $\frac{1}{4}$ " red abrasion of the right elbow, and a $\frac{1}{2}$ " x $\frac{1}{4}$ " red abrasion of the medial right elbow. There is a $\frac{3}{8}$ " x $\frac{1}{4}$ " brown scabbed abrasion of the ventral left forearm with an adjacent $\frac{1}{2}$ " x $\frac{1}{8}$ " light pink semicircular abrasion. There is patchy subcutaneous hemorrhage of the right elbow, the dorsal right upper arm, and the lateral right forearm measuring up to 2". There is subcutaneous hemorrhage of the left forearm measuring up to 1- $\frac{1}{2}$ ".
- G. Lower Extremities:** There are patchy subcutaneous hemorrhages of the anterior thighs, knees, and lower legs measuring up to 1- $\frac{1}{2}$ ". There is a $\frac{3}{4}$ " x $\frac{1}{8}$ " superficial linear pink abrasion of the anterolateral right thigh.

The injuries listed above, having been described once, will not be repeated.

INTERNAL EXAMINATION:

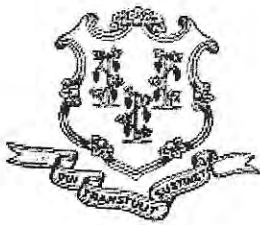

BODY CAVITIES: The organs are in their normal situs. The pericardial, pleural, and peritoneal cavities contain normal amounts of serous fluid and are without hemorrhage or adhesion. The abdominal wall pannus is 1- $\frac{1}{2}$ " thick.

HEAD: The brain weighs 1380 gm and is normal size and shape. The cerebral hemispheres have the usual pattern of sulci and gyri. The leptomeninges are thin and clear. The cerebral vessels are without atherosclerosis or aneurysm. The cranial nerves are normally distributed. The white and grey matter, deep nuclei, ventricles, brainstem, and cerebellum are unremarkable aside from the previously described injuries.

NECK: The cervical vertebrae, hyoid bone, tracheal and laryngeal cartilages, and paratracheal soft tissues are without trauma. The upper airway is patent. The tongue is unremarkable.

CARDIOVASCULAR SYSTEM: The heart weighs 370 gm and has a normal distribution of right predominant coronary arteries with slight atherosclerotic stenosis of up to 10% of the left anterior descending coronary artery, up to 10% of the left circumflex coronary artery, and up to 10% of the right coronary artery by eccentric yellow plaques of the intimal surface. There is no recent thrombus. The myocardium is homogeneous, dark red, and firm without pallor, hemorrhage, softening, or fibrosis. The left ventricle wall is 1.5 cm thick and the right ventricle wall is 0.5 cm thick. The endocardial surfaces and four cardiac valves are unremarkable. The aorta has slight atherosclerosis comprised of fatty yellow streaks of the intimal surface. The venae cavae and pulmonary arteries are patent.

RESPIRATORY SYSTEM: The right lung weighs 460 gm and the left lung weighs 420 gm. The red-purple parenchyma is spongy and congested without masses, consolidation, or obstruction. The bronchi are unremarkable.

STATE OF CONNECTICUT
Office of the Chief Medical Examiner
11 Shuttle Road, Farmington, CT 06032

M.E. CASE NUMBER: 19-13419-Zaporta, Alphonso

LIVER, GALLBLADDER, PANCREAS: The liver weighs 1810 gm and has an intact capsule. The soft brown parenchyma is without fibrous texture. The gallbladder contains approximately 10 cc of dark green liquid bile without stones. The pancreas is unremarkable in lobulation, color, and texture.

HEMIC AND LYMPHATIC SYSTEMS: The spleen weighs 80 gm and has an intact, grey-purple, slightly wrinkled capsule. The color, red and white pulp, and consistency are unremarkable. There are no enlarged lymph nodes.

GENITOURINARY SYSTEM: The right kidney weighs 140 gm and the left kidney weighs 150 gm. Each kidney has a smooth red-brown surface with an unremarkable architecture and vasculature. The ureters maintain uniform caliber into an unremarkable urinary bladder containing approximately 60 cc of yellow urine. The prostate is not enlarged. The testes are unremarkable.

ENDOCRINE SYSTEM: The pituitary, thyroid, and adrenal glands are normal color, size, and consistency.

DIGESTIVE SYSTEM: The esophagus and gastroesophageal junction are unremarkable. The stomach contains approximately 30 cc of cloudy tan fluid without any solids. The gastric mucosa, small intestine, and large intestine are unremarkable. The vermiform appendix is unremarkable.

MUSCULOSKELETAL SYSTEM: The vertebrae, clavicles, sternum, ribs, and pelvis are without fracture. The musculature is normally distributed and unremarkable.

TOXICOLOGY:

Blood, vitreous, urine, liver, brain, and gastric content specimens are submitted to the State of Connecticut Division of Scientific Services for toxicologic analysis. A separate report will be issued.

FORENSIC BIOLOGY:

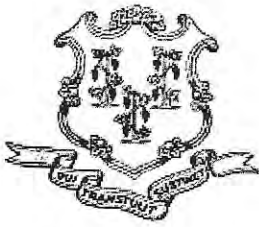

Blood, fingernail, and hair specimens are submitted to the State of Connecticut Division of Scientific Services. A separate report will be issued.

POST-MORTEM RADIOGRAPHY:

Post-mortem radiographs are taken, examined, and retained.

PHOTOGRAPHY:

Post-mortem photographs are taken and retained.

LABORATORY REPORT

This report contains the results of the Toxicology Unit examinations.

Report To: Gregory Vincent
Date of Report: September 26, 2019
Agency: Office of the Chief Medical Examiner
Lab Case #: DSS-19-004168 Request: 0010
11 Shuttle Road
Agency Case #: 19-13419GVCA
Farmington, CT 06032
Date Submission(s) Received: July 30, 2019

EVIDENCE SUBMITTED:

Evidence Submission 014: TX O.C.M.E. "Specimen(s)"
Item #014-001: blood (femoral)
Item #014-002: vitreous
Item #014-003: urine

Results:

Item #014-001: blood
No Drugs Detected
Ethanol 0.156 g% ± 0.009 g%
Item #014-002: vitreous
Ethanol 0.178 g% ± 0.010 g%
Item #014-003: urine
Specimen not analyzed

Methods: Some or all of the following techniques were used in the analysis of the submitted evidence.

ELISA: Enzyme-Linked Immunosorbent Assay
GC/MS: Gas Chromatography / Mass Spectrometry
HS/GC: Headspace Gas Chromatography
LC/MS/MS: High Pressure Liquid Chromatography / Mass Spectrometry / Mass Spectrometry

Remarks:

Presumptive results are any results from the following methods: EMIT, ELISA, or LC/HRAM-MS (no MS/MS).
Uncertainty is expressed at a 95.45% confidence level for any concentration reported above.

For the Office of the Chief Medical Examiner (OCME) only:

For questions about the content of this report please contact the Toxicology Unit at 203-427-4040.

For questions about the status of your submission, including any remaining forensic examinations, please contact the Case Management Unit at 203-427-4098 or send an e-mail to: CT.ForensicLab@ct.gov.

Disposition:

Evidence will be retained at the DSS laboratory for at least one (1) year and will then be discarded.

Limitations:

Information within the evidence descriptions (e.g., name, date of draw, time of draw) are from the Requesting Agency and such information has been transcribed either from sample containers or from incoming documents.

This report is limited to the following volatile analytes unless specifically listed: ethanol, methanol, acetone, isopropanol.

Volatile analytes reported as 'not detected,' 'negative,' or similar verbiage may mean that analytes were either not detected or were below the method's reportable limit.

Results apply to the evidence as received by the Division of Scientific Services and relate only to the items tested. This report reflects the test results, conclusions, interpretations, and/or the findings of the analyst(s) as indicated by their signature below.
