

# **The State of Connecticut MTG Pavement Design Catalog**

## **Preface**

### **Summary**

This Catalog contains a listing of all route segments on the State Highway Network by route and milepoint. For each route segment, a Pavement Structure (“Pvmt Struc”) and corresponding Superpave Level (“SP Level”) are provided. This will allow users to obtain most MTG road pavement designs without asking for a review by Pavement Management.

The Catalog recommends one of five possible Pavement Structures along with a Superpave Level. If, however, these numbers are zero (0), it is recommended that Pavement Management be contacted because of the likelihood that a more detailed analysis of the pavement is probably warranted. Instructions on how to incorporate the Superpave Level into a project as well as how to access relevant bituminous concrete specifications are presented in Appendix A. The five Pavement Structures are listed and represented graphically in Appendix B.

### **Introduction**

The Pavement Management Unit has developed a Pavement Design Catalog for Major Traffic Generators (MTG) projects. MTGs are typically the result of a private developer wishing to expand or create a new property/facility in which a significant amount of new traffic will be generated. The existing traffic facilities and routes in the vicinity of the proposed development are then evaluated for potential impact by the increase in traffic generated. In some cases, expansion of existing roadways is warranted.

### **The Major Traffic Generator (MTG) Catalog**

The attached Pavement Design Catalog provides Engineers and Planners with pavement designs and guidance for MTG and other encroachment-permit projects in which State routes will either be newly constructed, reconstructed, or widened. We have also attached a few explanatory documents related to needed bituminous concrete specifications. These pavement designs are based on the traffic volume (Average Daily Traffic (ADT), from the Traffic Log) and classification (percent of cars, trucks, and/or buses). The subgrade soil characteristics are assumed to be acceptable unless a field review indicates there may be a subgrade soils issue, or it is brought to Pavement Management’s attention by others. In such rare cases, additional subgrade soil considerations may be warranted. The responsibility of determining whether the existing roadway should be overlaid, or milled and overlaid, currently lies with Maintenance Permits.

Several other considerations have been built into the Catalog that result in Pavement Structure or Superpave Level variations along route segments. These include an attempt to make long, homogeneous segments wherever possible, the presence of underlying concrete on a segment of highway, and strict correspondence with the information provided in the statewide Superpave Design Levels map.

## **Important Notice**

The instructions and related information contained in this document are intended for the specific purpose of selection or verification of the Pavement Structures and Superpave Levels for encroachment permit applications on State Routes, including Major Traffic Generators. They do not address the permit-application procedure itself.

For more detailed instructions and information regarding the pavement aspects of the encroachment permit application or for an electronic version of this document, please visit the Connecticut Department of Transportation's Pavements web page at <http://www.ct.gov/dot/cwp/view.asp?a=1400&q=432392>.

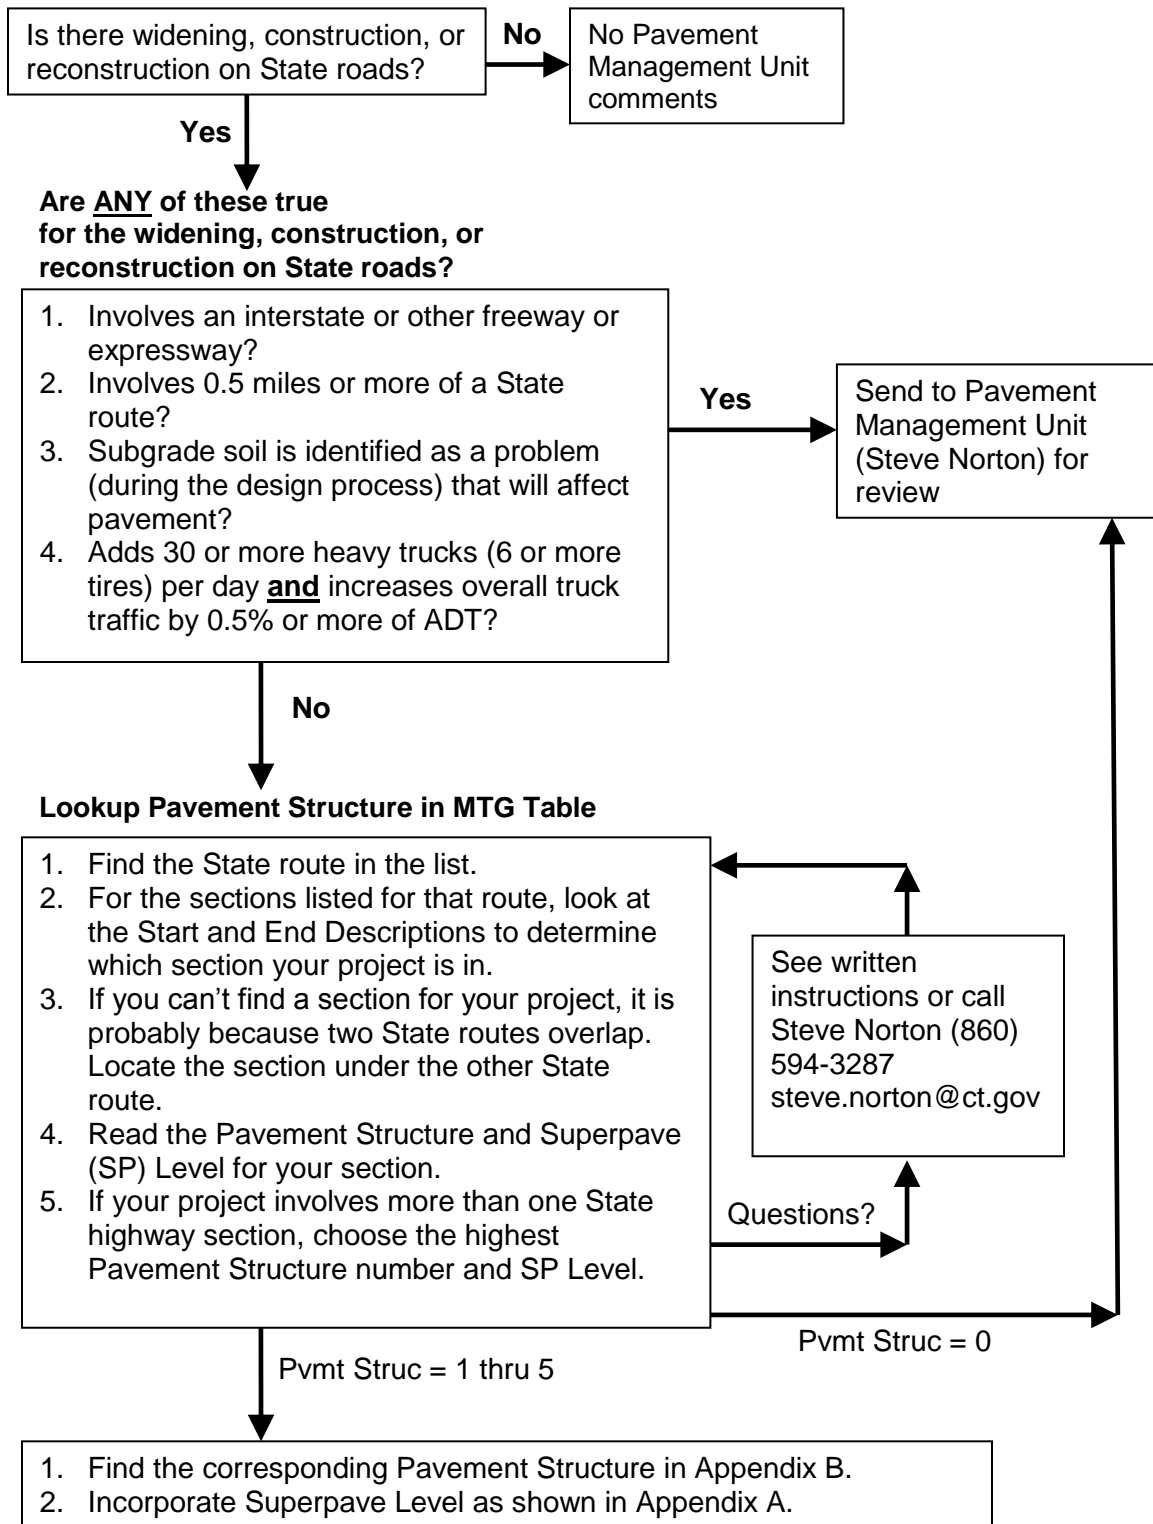

For information on the entire Permit process, please visit the Department's Permits web page at <http://www.ct.gov/dot/cwp/view.asp?A=1394&Q=430986>.

If you have any questions regarding this document please contact Steve Norton [steve.norton@ct.gov](mailto:steve.norton@ct.gov) or call him at (860) 594-3287.

## Glossary/Abbreviations

<b>ACC</b> - Access	<b>N</b> - North
<b>ACCMP</b> - Asphalt coated corrugated metal pipe	<b>N/O</b> - North Over
<b>ADT</b> - Average Daily Traffic	<b>NB</b> - North Bound
<b>AVE</b> - Avenue	<b>NTC</b> - Superpave Notice to Contractor
<b>BGN OVLP</b> - Begin Overlap	<b>OP</b> - Overpass
<b>BK</b> - Brook	<b>PG</b> - Performance Graded
<b>BLVD</b> - Boulevard	<b>Pvmt Struc</b> - Pavement Structure
<b>CIR</b> - Circle	<b>RTE.</b> and/or <b>Rte.</b> - Route
<b>CDS</b> - Cul-De-Sac	<b>RMP</b> - Ramp
<b>CON</b> - Connector	<b>RV</b> - River
<b>CONN</b> - Connecticut	<b>S</b> - South
<b>DE</b> - Dead End	<b>S/O</b> - South Over
<b>DEP</b> - Department of Environmental Protection	<b>SB</b> - South Bound
<b>DOT</b> - Department Of Transportation	<b>SHLD</b> - Shoulder
<b>DR</b> - Drive	<b>SI</b> - State Institution
<b>E</b> - East	<b>SL</b> - State Line
<b>E/O</b> - East Over	<b>SP Level</b> - Superpave Level
<b>EB</b> - East Bound	<b>SR</b> - State Route
<b>End Description</b> - A Brief Description of the End Town	<b>SRV</b> - Serving
<b>End Town</b> - The Town that the Specific Route Ends	<b>SSR</b> - Special Service Road
<b>EXPWY</b> - Expressway	<b>ST</b> - Street
<b>EXT</b> - Extension	<b>Start Description</b> - A Brief Description of the Start Town
<b>From (Mile Point)</b> - The Start Mile of the MTG	<b>Start Town</b> - The Town that the Specific Route Starts
<b>HMA S*</b> - Hot Mix Asphalt Superpave	<b>TL</b> - Town Line
<b>HWY</b> - Highway	<b>To (Mile Point)</b> - The Ending Mile of the MTG
<b>I</b> - Interstate	<b>TPKE</b> - Turnpike
<b>JCT</b> - Junction	<b>UP</b> - Underpass
<b>Length (miles)</b> - Length of a State Route Segment (From (Mile Point) To (Mile Point))	<b>US</b> - United States
<b>LT</b> - Left	<b>W</b> - West
<b>Mi</b> - Mile	<b>W/O</b> - West Over
<b>ML</b> - Main Line	<b>WB</b> - West Bound
<b>MTG</b> - Major Traffic Generator	
<b>MTN</b> - Mountain	

# Picking a Pavement Structure for an MTG

## **Determining a Pavement Structure for a Permit Submittal**

The following step by step process of pavement designs is intended for selecting MTG Pavement Structures and Superpave Levels only. It follows a step by step process to allow Engineers and Planners to select an appropriate pavement design for the construction, reconstruction, or widening of State roadways.

### **Step 1:**

Locate the appropriate route and mile point in the attached MTG Table, which divides all State routes into pavement sections. For each section, the MTG Table lists the start and end town along with a brief description to assist the Engineer or Planner in locating the route section affected by the MTG. Pavement Management has determined the appropriate Pavement Structure and Superpave Level to be used for each section. The Engineer or Planner selects the Pavement Structure and Superpave Level that is corresponding to the route and mile point in the MTG Table.

### **Step 2:**

Use the information collected from the MTG Table to designate each road section in a project in terms of both Pavement Structure and Superpave Level. Please see Appendix A for instructions on how to appropriately incorporate Superpave Level information into contract documents.

### **Notes:**

1. If you are trying to locate a certain route and mile point, and find that the mile point is missing from the MTG Table, this is probably because the route overlaps with another route. The Engineer then needs to locate the alternate route that overlaps at the missing mile point and use the corresponding design information for that alternate route. If the mile point is missing, and there is no corresponding route that overlaps, contact Steve Norton in Pavement Management (594-3287).
2. If there is a "0" under the Pavement Structure and Superpave Level, then it is an Interstate or Expressway. The Pavement Management Unit would like to review all Interstate and Expressway projects.
3. If the project extends through multiple road sections with different pavement structures, the superior of the structures must be utilized (example: Route 4 in Torrington between MP 19.5 and MP 19.8 will be reconstructed. At these mile points, Pavement Structures 2 and 4 are recommended; use Pavement Structure 4).

4. The determination to overlay the existing roadway pavement, or not, is made by District Maintenance Planners. They use the District's Pavement Serviceability Rating (PSR) score to determine whether to perform a curb to curb overlay of the entire pavement surface within the project limits. Other reasons, such as realignment of line striping due to a proposed lane shift, may also warrant an overlay of the existing pavement surface.
5. Unless otherwise noted, any subgrade issues or concerns will be addressed on site during actual construction. If problematic subgrades are encountered they shall be corrected by one or any combination of the following: replacing unsuitable subgrade material with suitable granular material, utilizing approved geotextile fabrics alone or in combination with replacement granular material, increasing granular base depths in rock cut areas, and installing under/edge drain in wet or runoff/seepage areas.

# Appendix A

## **I. Bituminous Concrete Specifications**

Links to the latest versions of the relevant bituminous concrete specifications can be found at the following link: <http://www.ct.gov/dot/cwp/view.asp?a=2288&Q=498392>

1. Click on CTDOT Owned Special Provisions
2. Click on Accept checkbox
3. Click on Go to Contract Development Owned Special Provisions
4. Scroll down to:
  - Section 4.06 - Bituminous Concrete
  - Section M.04 - Bituminous Concrete Materials

## **II. Superpave Level**

Instructions on how to appropriately incorporate Superpave Level information into contract documents can be found at the following link: <http://www.ct.gov/dot/lib/dot/documents/aec/EB-2016-7.pdf>

## **III. Example**

The following is an example of how to use the MTG Table to find design information for a specific road section and include that information in a project (please note that this is a hypothetical scenario):

The MTG in question will be widening on Route 44 at mile point 80.17 in Ashford to provide for a turning lane at a newly proposed apartment complex. The roadway is classified as rural minor arterial (from the Highway Log), with a current ADT of 5,400 vehicles per day (from the Traffic Log).

Based on the MTG Table, Pavement Structure 2 and Superpave Level 2 should be used.

This information shall be included in typical section legend notes within a project plan set or other contract document as indicated below:

- 4” HMA S0.5 Traffic Level 2 (placed in two equal lifts)
- 3” HMA S1 Traffic Level 2 (placed in a single lift)
- 12” Subbase (20” in Rock Cut)
