

# High Occupancy Vehicle Lane Report 2010

Interstate 84 Westbound  
Interstate 91 Southbound

Prepared by:

CONNECTICUT DEPARTMENT OF TRANSPORTATION  
BUREAU OF POLICY & PLANNING  
DIVISION OF SYSTEMS INFORMATION

November 2010

Since their inception, Connecticut's High Occupancy Vehicle (HOV) lanes have benefited thousands of commuters every day. In 1989, the first HOV lanes opened east of Hartford along I-84 and I-384. Four years later, in 1993, HOV lanes were opened north of Hartford along I-91.

Envisioned to serve multi-occupant autos, commuter vans, buses, and motorcycles, the 38 lane-mile HOV system is located on Interstates 84 and 384 (east of Hartford), and Interstate 91 (north of Hartford). The HOV facility along I-84 is approximately 18.8 lane miles, the I-384 HOV facility is 3.3 lane miles and the I-91 HOV facility is 15.7 lane miles.

In the year 2000, an extension of the I-84 HOV lane into Hartford was completed. This 1.25 mile extension ends at the Founders Bridge, allowing carpoolers destined to the downtown area to utilize the HOV lane all the way into Hartford. Only those HOV users destined farther west must continue to merge with westbound mainline traffic. In addition, the I-84 HOV lanes were re-striped to allow for more flexible operation. Eastbound travelers can now enter the HOV lane from I-84 or Route 15 in the vicinity of the Showcase Cinemas in East Hartford. This allows carpoolers the option of using the HOV lane if the mainline becomes congested. This re-striping also gives eastbound users of the Charter Oak Bridge the opportunity to enter the HOV lane.

Users of the westbound HOV lanes from the Manchester area (the I-84 or I-384 facilities) have the option of exiting just after crossing Sunset Ridge in East Hartford, either joining the I-84 mainline earlier or taking Route 15 westbound (via the Charter Oak Bridge), which could not be done previously.

Often during peak commuter hours, mainline traffic on Interstates 84 and 91 is slow and congested. Traffic on the HOV lanes, on the other hand, is usually traveling unimpeded during these peak hours.

Benefits from continued HOV use are:

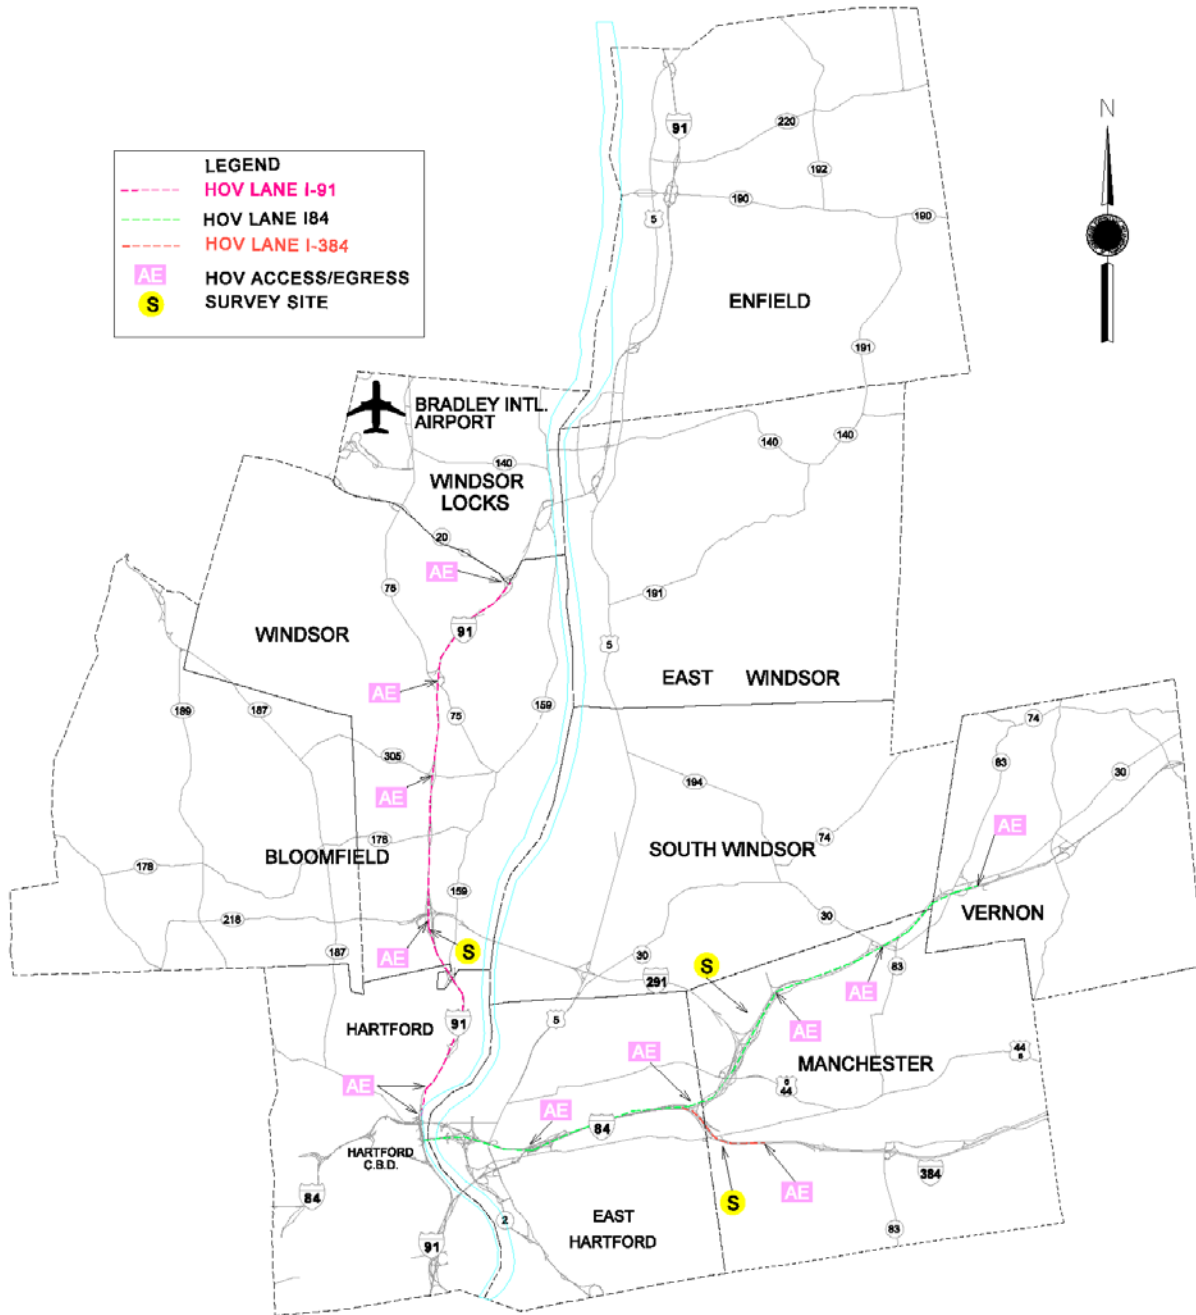

- promotion of carpooling and transit
- travel time savings
- reduced fuel consumption
- reduced vehicle emissions
- lower accident rates
- reduced traffic congestion

The State Traffic Commission (STC) regulates the usage of the HOV lanes, including the minimum number of passengers per vehicle and the type of vehicles allowed. These regulations are adopted in cooperation and agreement with local traffic authorities governing the use of state highways and roads. The STC derives its authority from Section 14-298 of the Connecticut General Statutes and is comprised of the commissioners of the Connecticut Departments of Transportation, Public Safety, and Motor Vehicles. Information on regulations and responsibilities of the STC, as well as an online version of this report, may be found on ConnDOT's website, [www.CT.gov/dot](http://www.CT.gov/dot).

The Bureau of Policy and Planning has been monitoring Connecticut's HOV facility usage since 1989 through annual on-site counts. These counts provide a "snap shot" view of the amount of HOV usage during the morning peak period (6 a.m. – 9 a.m.) on a typical commuting day. The results of the 2010 counts are presented in this report along with comparisons to previous years' data.

Figure. 1 shows the Hartford area HOV facilities and the location of the survey sites.

# HARTFORD AREA HOV LANES WITH ACCESS POINTS I-91, I-84 & I-384

**Figure 1**

**SURVEY SITE LOCATIONS:**

**Interstate 91 Southbound**

The location of this site is at the Interstate 291/Route 218 interchange on-ramp (Windsor). Access to the HOV can be attained from: Interstate 91 Southbound mainline (Windsor), Route 75 on-ramp (Windsor), Bloomfield Avenue on-ramp (Windsor), and Interstate 291/Route 218 interchange on-ramp (Windsor).

**Interstate 84 Westbound**

Due to roadway geometric constraints, it is not possible to safely park a vehicle to take a direct count of all Interstate 84 Westbound HOV traffic. Instead, the HOV traffic was counted at two separate locations: on Interstate 384 Westbound & on Interstate 84 Westbound prior to the I-84/I-384 interchange. Those two counts were added to reflect Interstate 84 Westbound total HOV usage.

Access to the HOV can be attained from: Interstate 84 Westbound mainline (Vernon), Route 30 on-ramp (Vernon), Buckland Street on-ramp (Manchester) and Interstate 384 Westbound mainline (Manchester).

The data collected consists of vehicle and passenger counts taken at 15-minute intervals between the hours of 6 a.m. and 9 a.m. This information has been compiled for the years 1989 through 2010 and is summarized on the following pages. Primary statistics from this year's survey are:

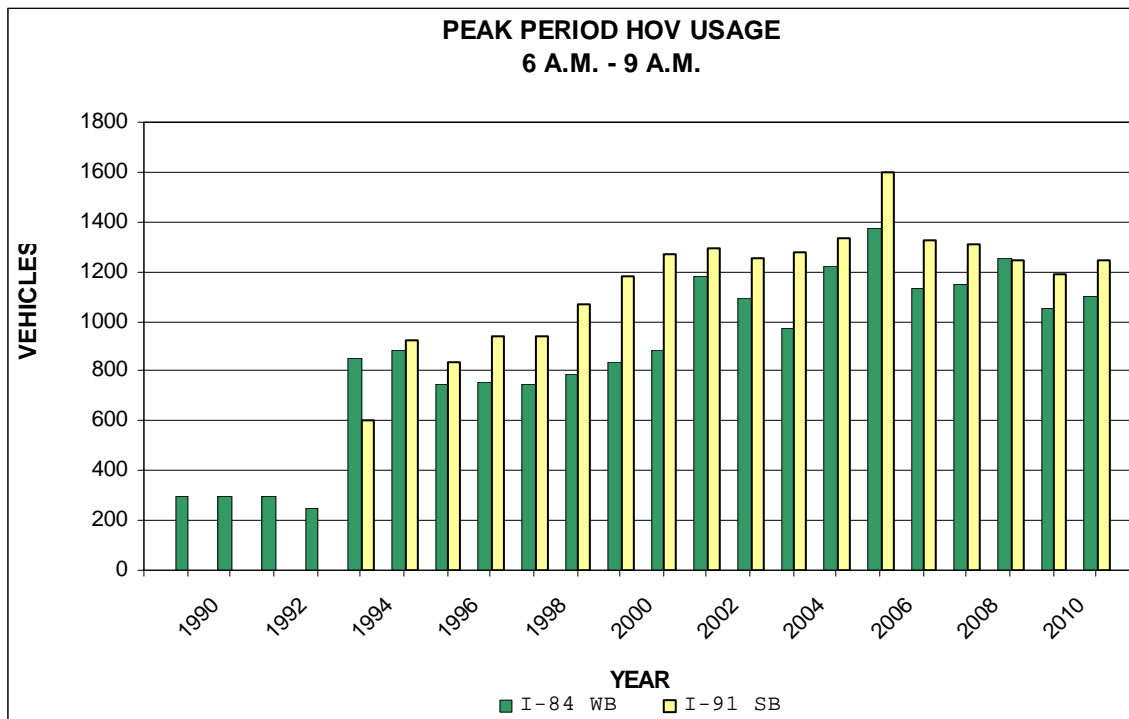

#### Interstates 84/384 Westbound HOV (A.M. peak period)

- \* 1,098 total vehicles carrying 3,995 persons;
- \* 27 express buses carrying approximately 594 people;
- \* 49 percent of the HOV users commute in vans and buses;
- \* Average occupancy is 2.11 persons per automobile;
- \* Peak usage occurred during 7:30 a.m. – 8:30 a.m.

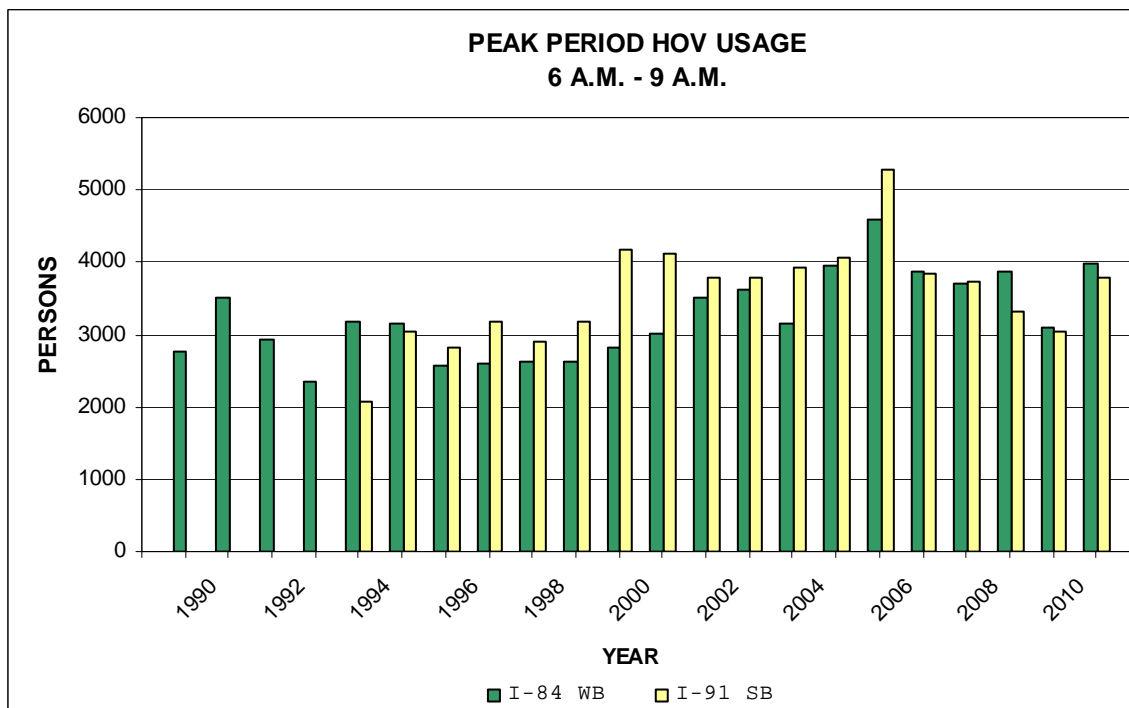

#### Interstate 91 Southbound HOV (A.M. peak period)

- \* 1,243 total vehicles carrying 3,776 persons;
- \* 32 express buses carrying approximately 480 people;
- \* 35 percent of the HOV users commute in vans and buses;
- \* Average occupancy is 2.10 persons per automobile;
- \* Peak usage occurred during 7:15 a.m. - 8:15 a.m.

The following charts show the trend in the number of vehicles and persons utilizing the HOV lanes during the morning peak period. In 1993, HOV service began for Interstate 91. Also, in 1993, the minimum number of occupants per vehicle required for legal HOV lane use was changed from three to two.

Additional traffic counts were taken on the HOV lanes and the HOV entrance and exit ramps to monitor the hourly and daily variation of HOV usage. Counts at several locations on the I-84 and I-91 HOV lanes were obtained by hour of the day and day of the week. Figure 5 shows the location of the sites and Table 2 lists the average daily vehicle counts for each site. Figures 6 through 18 show the hourly distribution of traffic for each of the nine locations by average weekday (Monday through Thursday), Friday, and average weekend (Saturday and Sunday).

An analysis of these counts showed the following:

#### Interstate 84/384 HOV

- Friday westbound and eastbound average HOV lane usage is higher than average weekday and weekend usage.
- In general, average weekday HOV traffic on I-84 westbound is near equal to the weekend and eastbound is lower than weekend.

#### Interstate 91 HOV

- Friday southbound and northbound average HOV traffic is higher than weekday and weekend traffic.
- Average weekday HOV northbound and southbound traffic is higher than weekend usage.

## Comparison of Occupants in the HOV Lane to the I-84 Mainline

Additional traffic counts were taken on the I-84 Mainline and HOV lanes to compare the hourly variation of persons traveling in each lane class. Figure 16 shows the hourly distribution of weekday (Monday through Thursday) eastbound traffic which peaks in the afternoon. During its peak hour, HOV usage is 38 percent of the mainline usage. Figure 17 shows the hourly distribution of weekday westbound traffic which peaks in the morning. During its peak hour, HOV usage is 45 percent of the mainline usage.

Note: Calculations for Figures 16 & 17 do not include motorcycles, illegal vehicles, or empty buses.

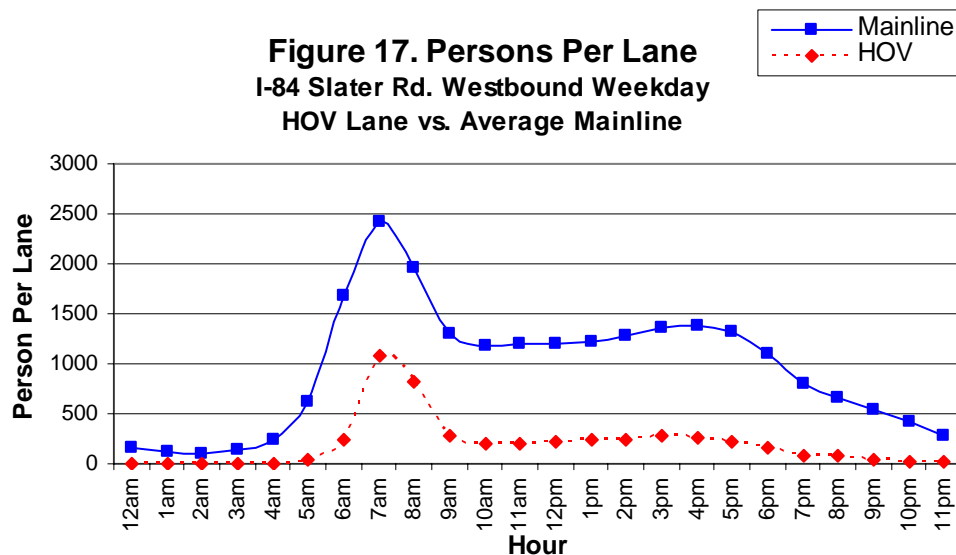

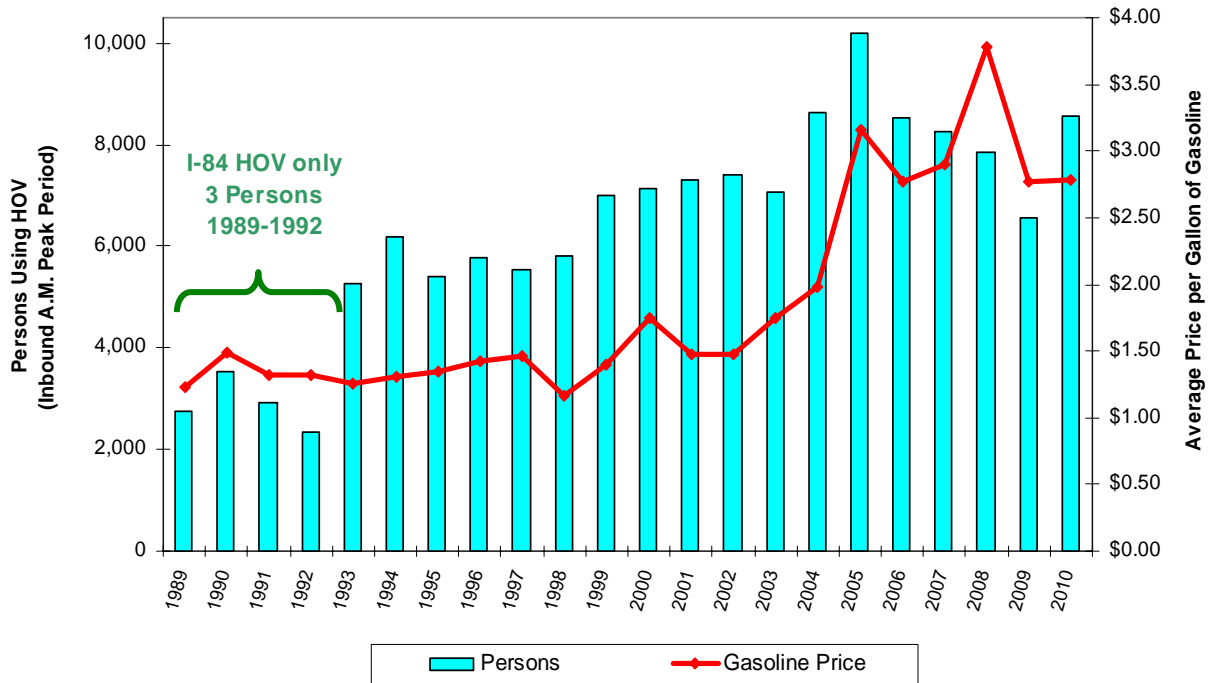

Figure 18 illustrates historical HOV usage and the average price of regular, unleaded gasoline in the state.

## SUMMARY

The survey results reinforce the viability of an HOV facility as a travel alternative for Hartford-bound commuters. The intent of the HOV program is not to force individuals into making changes against their will; rather, the primary objective is to provide a cost-effective travel alternative that a significant number of commuters will find attractive. By encouraging this change, the HOV facility increases the number of people, while reducing the number of vehicles, being carried on the roadway. Increased occupancy rates can have a dramatic impact on the number of people that can be accommodated by a facility, as illustrated below.

**Figure 19. Persons per Hour per Travel Lane**

Given an average occupancy of 10 persons per van and 32 persons per bus, the potential number of persons carried increases dramatically with increased occupancy. An average highway lane has a capacity of 2,200 vehicles per hour, per lane. The person capacity doubles to 4,400 per lane per hour, if all the vehicles had two occupants. Therefore, the potential person capacity of an HOV lane carrying 1,467<sup>1</sup> buses at 65 percent capacity (32 people per bus) would be about 47,000.

The HOV occupants in the commuter buses, vanpools, and carpools on these lanes realize that the HOV facility provides an attractive alternative to the general-purpose lanes during this period. Single Occupant Vehicle (SOV) commuters who have yet to take the steps necessary to become legal users of the lanes by changing to a mode with higher occupancy should be the focus of marketing techniques. A significant amount of SOV traffic (illegal vehicles) is using the restricted lanes. Strict enforcement of HOV access is critical to encourage a shift in commuting habits. The Connecticut HOV facilities can provide the capacity and flexibility required to serve the Hartford area now and in the future. The current challenge is to implement supporting policies, facilities, programs and the advanced technology that will encourage people to make use of the travel time savings and reliability provided by the HOV facilities.

<sup>1</sup> According to the Highway Capacity Manual 2000 page 23-9, the passenger-car equivalent for a bus on level terrain is 1.5 cars per bus. (2,200 cars/1.5 cars per bus = 1,467 buses)
