2015

Connecticut Crash Facts Book

CTSRC

Published August 4, 2017

Section I: Executive Summary

Introduction

This report presents data of motor vehicle crashes that occurred on Connecticut's publicly maintained roadways during 2015. The information required to produce this report was obtained from police crash reports supplied to the Connecticut Department of Transportation (CT DOT) by investigating police agencies. This information is then transferred to the Connecticut Crash Data Repository (CTCDR), which is housed at the Connecticut Transportation Safety Research Center (CTSRC).

As of January 1st, 2015, in order to fall in line with the National Highway Traffic Safety Administration's (NHTSA) emphasis on data driven performance measures and goals, the State of Connecticut changed the requirements for how police departments investigate and document motor vehicle collisions using the Model Minimum Uniform Crash Criteria (MMUCC) guidelines. MMUCC is a nationally standardized dataset for describing motor vehicle crashes. The MMUCC revisions to our crash report form, or PR-1, were the first to be made to the state's collision documentation in over 20 years. The revised crash report enables the collection of new information about drivers' actions in the moments leading up to and in the aftermath of a crash.

The collection and dissemination of the data contained within this report would not have been possible without the support and collaboration of the following agencies and departments:

CT DOT Bureau of Policy and Planning

Connecticut Transportation Safety Research Center

Connecticut Traffic Records Coordinating Committee

Connecticut State Police

Connecticut Local Law Enforcement

National Highway Traffic Safety Administration

Federal Highway Administration

Notes and Data Limitations

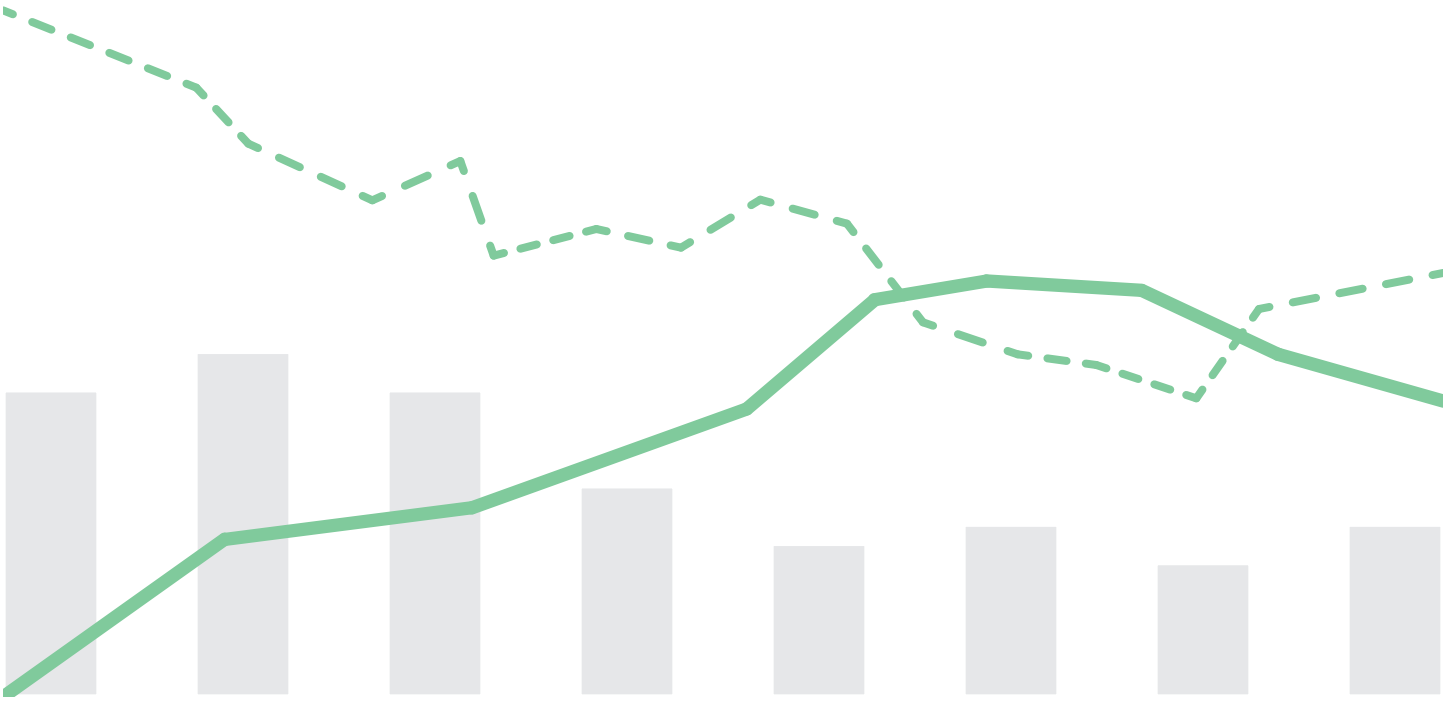
The reader should be aware of certain limitations in the data used to produce this report. These limitations include the following:

- The town of Windsor Locks did not submit crash data to CT DOT for **2011**. Therefore, there are no Windsor Locks crashes on file for that year.
- Property damage only crashes that occurred on locally maintained roadways were not coded for inclusion in the CT DOT traffic crash database for the time period of **January 1, 2002 to December 31, 2006** as well as **March 1, 2011 to December 31, 2011.** The reader should be aware of the omission of local road property damage only crashes when reviewing data for this particular time period.
- Only motor vehicle traffic crashes that have been reported to the CT DOT are included in this report. Not included are crashes that did not meet the minimum criteria for a reportable crash, crashes that the police did not investigate, and crashes that the police investigated but did not report or that CT DOT did not receive.
- Data discrepancies may exist between this report and previous crash fact book publications. These differences can be attributed to the state's transition to a new electronic crash reporting system and many substantial changes to the police crash reporting form, both of which went into effect **January 1, 2015.**
- The data contained within this report is only reflective of one year of crash data collected on the revised crash report form. Therefore, many of the variations between 2015 data and data from previous years can be attributed to the changes in data collection.
- In order to minimize misinterpretation of the data presented, please take note of the definitions provided in the glossary (Appendix A).
- Please be aware that graphs and charts are presented in a logarithmic scale. This was an intentional choice by the authors to make the data more visible for readers.

This report is published to inform the reader of current traffic crash statistics and trends. CT DOT and the CTSRC welcome any comments or suggestions regarding improvement of the content and structure of this report.

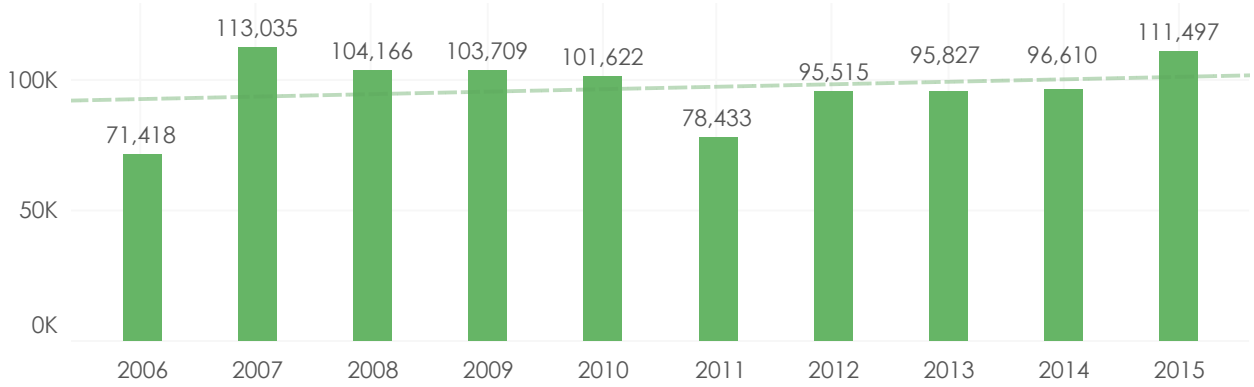
Table of Contents

Section II: Long Term Trends



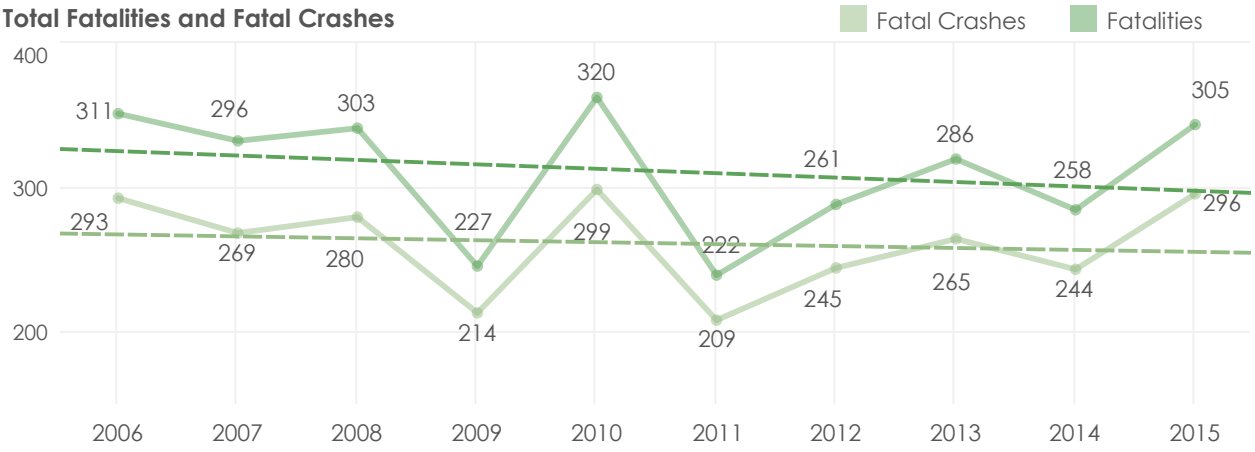
Ten Year Trends: Crash Totals

Total Crashes

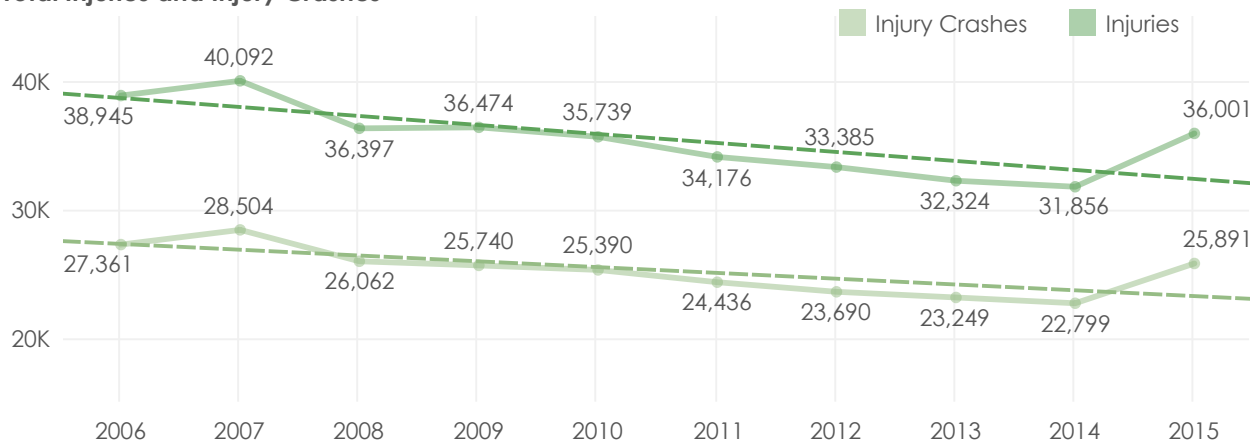


These figures show the ten year trends, from 2006 to 2015, for all crashes as well as fatalities, fatal crashes, injuries, and injury crashes. The dashed lines represent the long-term trend. Total crashes, injuries, and fatalities all saw increases over the previous year, but they were not the highest counts observed over the ten year period.

Total Fatalities and Fatal Crashes



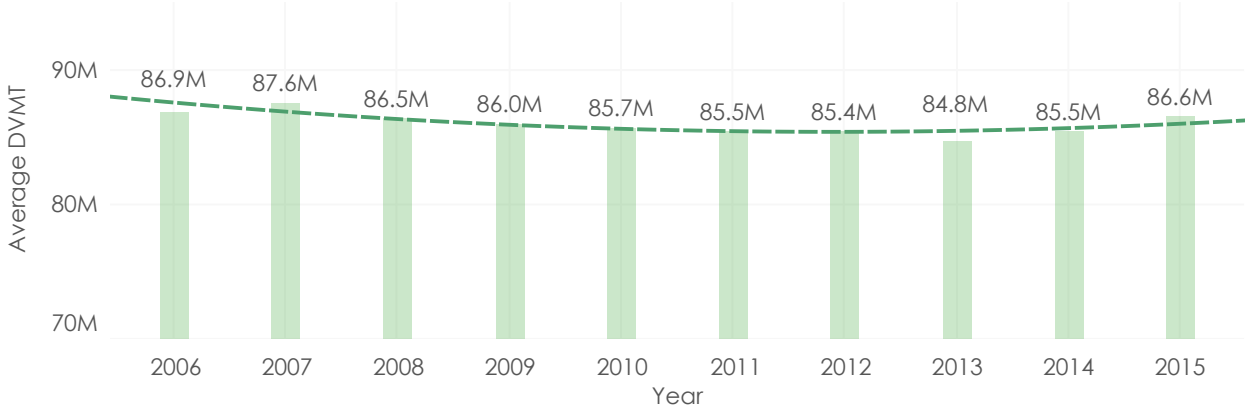
Total Injuries and Injury Crashes



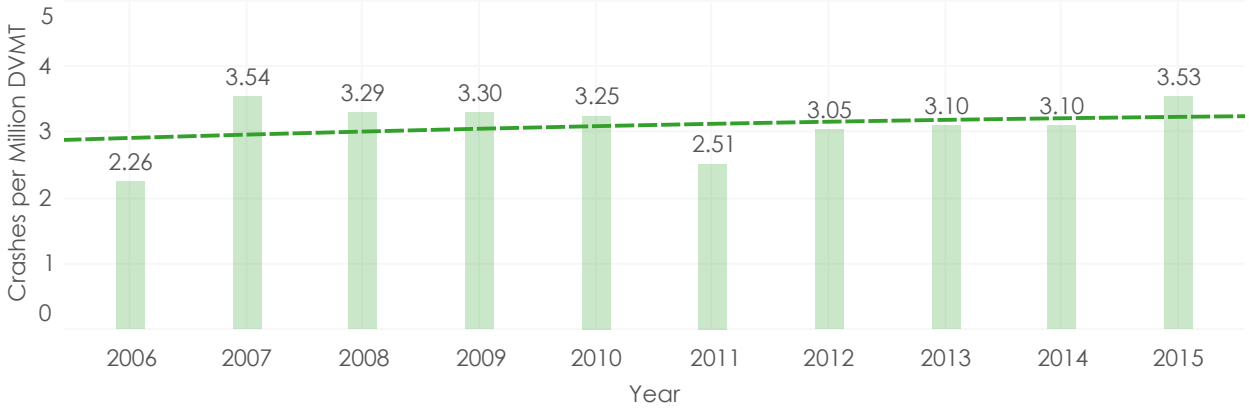
Ten Year Trends: Average Daily Vehicle Miles Traveled

The three graphs below display the statewide Daily Vehicles Miles Travelled (DVMT), as well as the number of crashes and fatal crashes adjusted by DVMT. DVMT measures the average daily miles traveled on all of the roads in the state. The ratio of crashes to DVMT shows the number of crashes adjusted for the total roadway traffic for the state. All three graphs display an increase in recent years for Average DVMT and Crashes and Fatalities per DVMT.

Average DVMT



Crashes by DVMT



Fatal Crashes by DVMT

Holiday Crashes: Three Year Comparison

Holiday periods often correspond with different driving patterns as well as an increase in risky driving behaviors. The table below shows the number of crashes, including injury and fatal crashes, for 2013, 2014 and 2015, as a comparison. The range of dates used to define the holidays for each year is shown on the right. Interestingly, some holiday periods show very similar patterns over a few years, such as New Year's; other holidays show large increases from 2014 to 2015, such as Thanksgiving and Christmas.

		2013	2014	2015
New Year's Day	Injury Crashes	86	99	94
	Fatal Crashes	0	0	0
	All Crashes	399	362	349
St. Patrick's Day	Injury Crashes	32	30	45
	Fatal Crashes	1	0	2
	All Crashes	128	161	265
Memorial Day Weekend	Injury Crashes	135	126	132
	Fatal Crashes	5	1	1
	All Crashes	459	459	465
4th of July Weekend	Injury Crashes	147	115	126
	Fatal Crashes	1	0	2
	All Crashes	515	383	402
Labor Day Weekend	Injury Crashes	59	56	61
	Fatal Crashes	0	1	1
	All Crashes	182	196	199
Thanksgiving	Injury Crashes	130	102	199
	Fatal Crashes	1	0	2
	All Crashes	505	440	778
Christmas	Injury Crashes	24	24	40
	Fatal Crashes	0	0	3
	All Crashes	100	90	141

New Year's Date Ranges:
2013: Sun12/30 to Wed 1/2
2014: Tues 12/30 to Fri 1/2
2015: Wed12/30 to Sat 1/2

St. Patrick's Day Date Ranges:
2013: Sat 3/16 to Mon 3/18
2014: Sun 3/16 to Tues 3/18
2015: Mon 3/16 to Wed 3/18

Memorial Day Date Ranges:
2013: Fri 5/24 to Mon 5/27
2014: Fri 5/23 to Mon 5/26
2015: Fri 5/22 to Mon 5/25

July 4th Date Ranges:
2013: Thurs 7/4 to Sun 7/7
2014: Thurs 7/3 to Sun 7/6
2015: Fri 7/3 to Mon 7/6

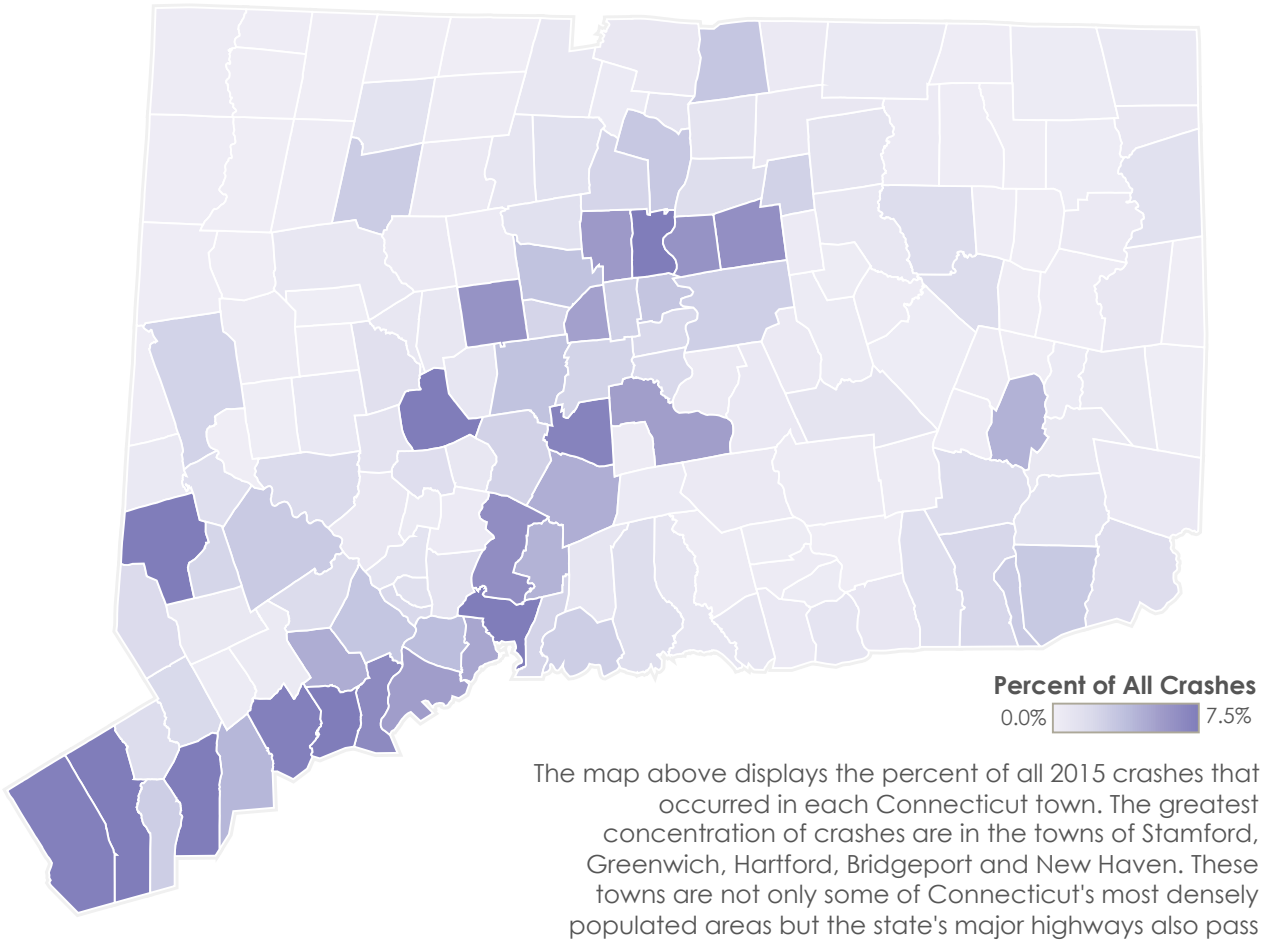
Labor Day Date Ranges:
2013: Sat 9/7 to Mon 9/9
2014: Sat 9/6 to Mon 9/8
2015: Sat 9/5 to Mon 9/7

Thanksgiving Date Ranges:
2013: Wed 11/27 to Sun 12/1
2014: Wed 11/26 to Sun 11/30
2015: Wed 11/25 to Sun 11/29

Christmas Date Ranges:
2013: Tues 12/24 to Thurs 12/26
2014: Wed 12/24 to Fri 12/26
2015: Thurs 12/24 to Sat 12/26

Section III: Crashes

2015 Crashes by Town



The map above displays the percent of all 2015 crashes that occurred in each Connecticut town. The greatest concentration of crashes are in the towns of Stamford, Greenwich, Hartford, Bridgeport and New Haven. These towns are not only some of Connecticut's most densely populated areas but the state's major highways also pass through them, which causes daily vehicle miles traveled to be higher in these areas.

2015 Crashes by Town (A-B)

The table below and on the next five subsequent pages displays the total number of crashes, fatal crashes, injury crashes, fatalities and injuries for all 169 Connecticut towns and the community of Mashantucket. New Haven had the highest number of total crashes at 8,177 and Waterbury had the highest number of fatal crashes with 16.

Town	Total Crashes	Fatal Crashes	Fatalities	Injury Crashes	Injuries
Andover	68	2	2	19	29
Ansonia	409	2	2	98	125
Ashford	48	1	1	11	11

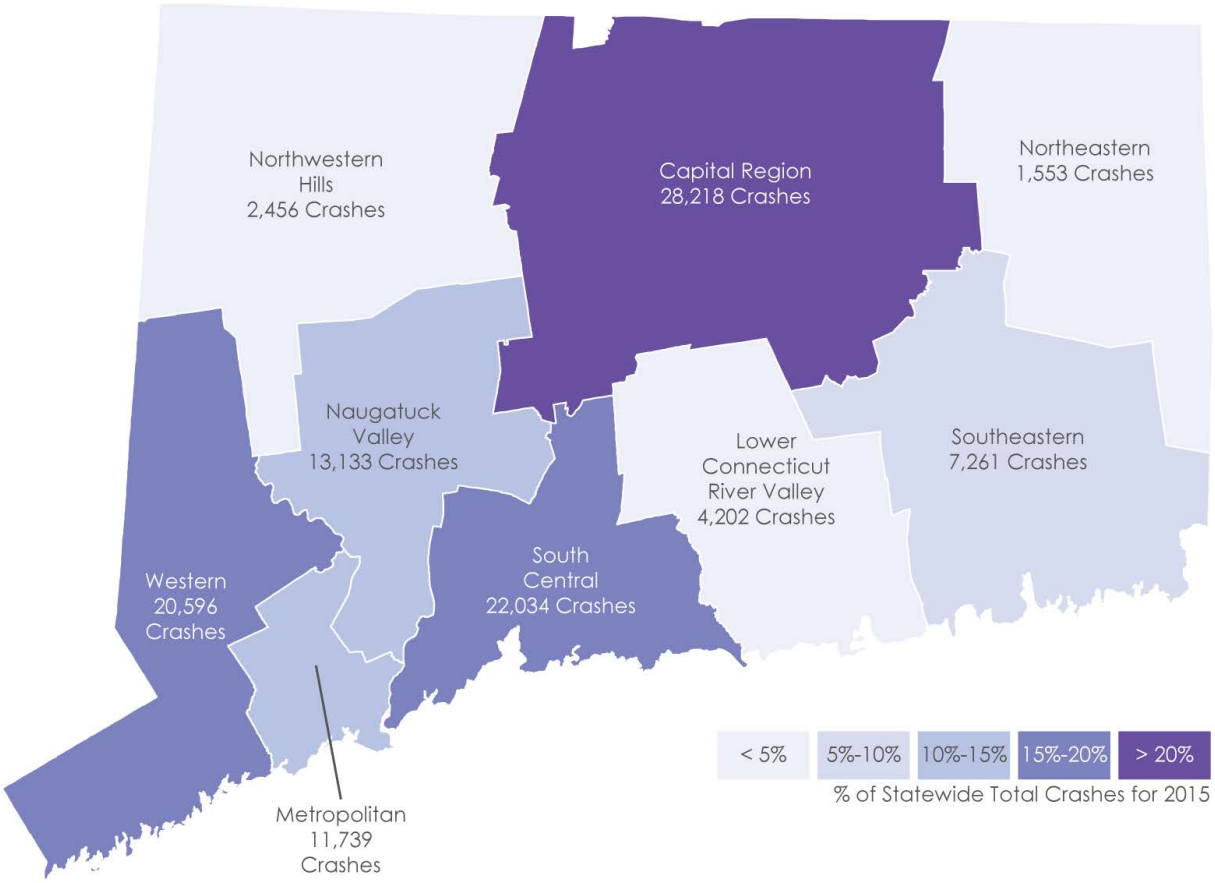
2015 Crashes by Council of Government (COG)

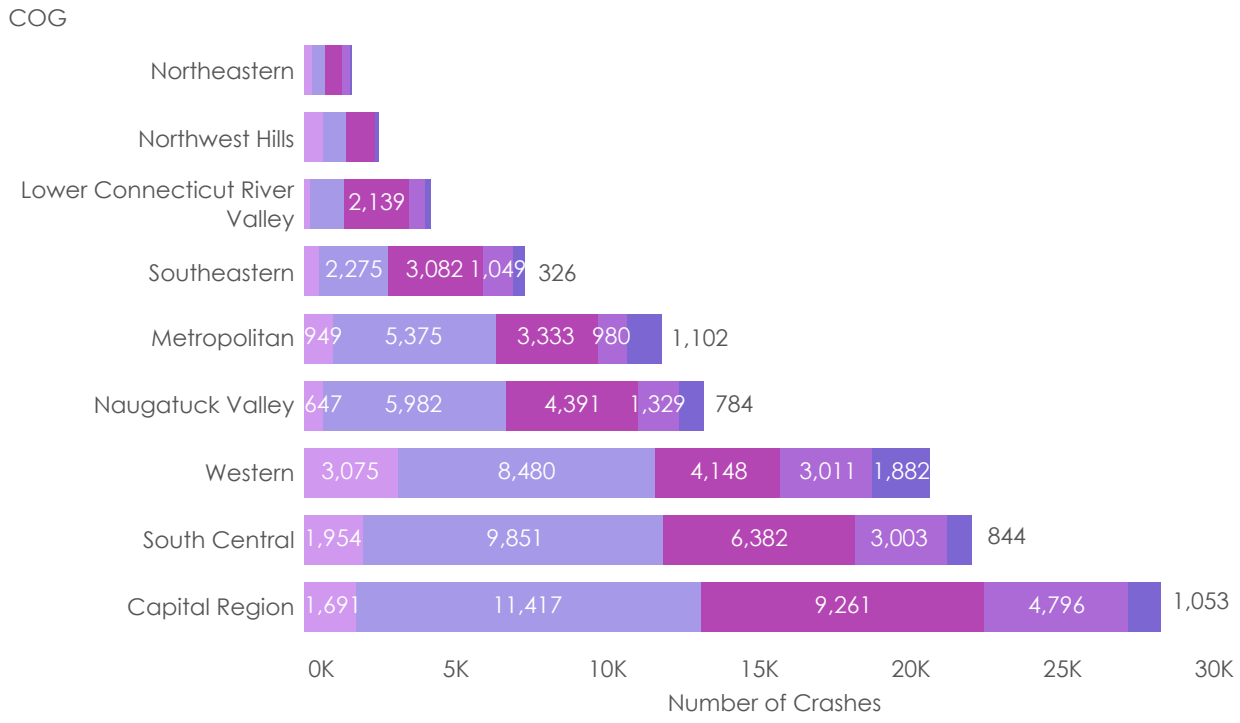


The map above below displays the total number of crashes in each Connecticut council of government (COG). The darker shaded COG indicates a higher percentage of 2015 crashes occurred in this area. The table below shows total number of crashes by COG and crash severity. The Capital Region Western CT and South Central COGs are where the greatest concentation of crashes occurred. The Northwest Hills and Norotheastern COGs are much loss densly populated, rural areas of the state.

COG Crashes by Crash Severity

	Fatal	Injury	PDO	Grand Total
Northeastern	16	416	1,121	1,553
Northwest Hills	13	526	1,917	2,456
Lower CT River Valley	21	868	3,313	4,202
Southeastern	25	1,544	5,692	7,261
CT Metropolitan	10	2,651	9,078	11,739
Naugatuck Valley	44	3,202	9,887	13,133
Western CT	26	3,978	16,592	20,596
South Central	35	5,407	16,592	22,034
Capital Region	72	7,226	20,920	28,218

2015 Crashes by Council of Government (COG) and Population Size

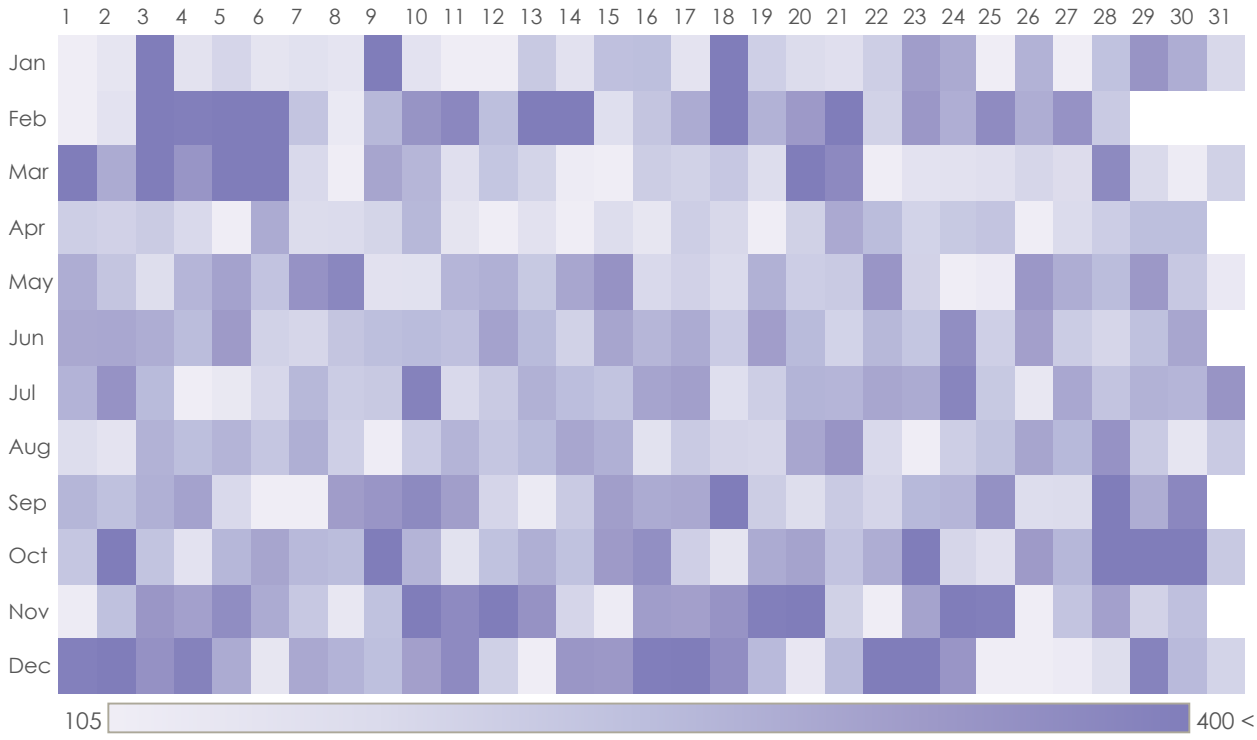


The graph above portrays 2015 crashes by council of government and route class.
The table below portrays 2015 crashes by town population. For each segment of population size, total crashes, injury crashes and fatal crashes are shown. In addition, the number of total crashes, injury crashes and fatal crashes per 100,000 people are shown. Based on the data in the table, in 2015 the towns with a population of 10,000 or fewer people experienced a higher fatal crash rate **despite having a lower number of fatal crashes than some other towns.**

Town Population*	Total Crashes	Crashes per 100K people	Injury Crashes	Injury Crashes per 100K people	Fatal Crashes	Fatal Crashes per 100K people
10,000 or fewer people	6,906	1,898	1,735	477	58	16
Between 10,000 and 25,000 people	20,760	2,508	4,746	573	61	7
Between 25,000 and 50,000 people	23,909	2,715	5,210	592	62	7
Between 50,000 and 100,000 people	28,537	3,236	6,705	760	44	5
Greater than 100,000 people	31,064	4,871	7,422	1,164	37	6

*Population estimates are courtesy of the US Census Bureau's 2010-2014 American Community Survey Results.

2015 Crashes by Day of the Month



The heatmap above shows the number of crashes for each day of 2015 and the accompanying table provides the crash totals for each month.

blank white spaces indicate no crashes occurred during that time period

From the chart, it is clear that more high crash days occurred in the months of January, February and March. However, the number of crashes are relatively consistent month to month.

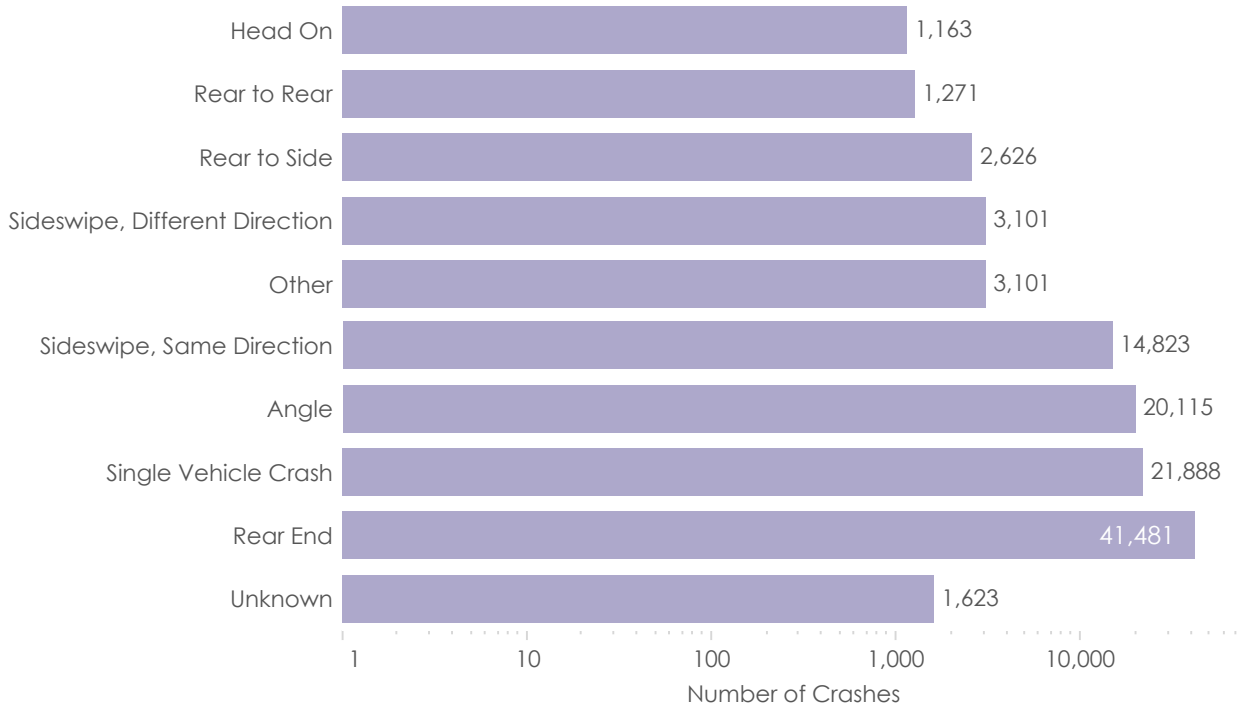
Month of Crash Date	Number of Crashes	% of Total
January	8,934	8.03%
February	9,631	8.66%
March	9,558	8.60%
April	7,681	6.91%
May	9,119	8.20%
June	9,151	8.23%
July	9,305	8.37%
August	8,829	7.94%
September	9,213	8.29%
October	10,032	9.02%
November	9,597	8.63%
December	10,142	9.12%
Grand Total	111,192	100.00%

2015 Crashes by Day of the Week and Time of Day

The heatmap below displays the 2015 crashes by Day of the Week and Time of Day. The totals by hour are listed on the right, and the total crashes by day of the week are listed at the bottom. It is clear that a majority of crashes occurred on weekdays between the hours of 7 AM and 9 AM as well as between 3 PM to 5 PM, corresponding with the morning and evening commutes to and from work.

	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Number of Crashes	% of Total
12 AM								1,808	1.63%
1 AM								1,571	1.41%
2 AM								1,320	1.19%
3 AM								933	0.84%
4 AM								974	0.88%
5 AM								1,639	1.47%
6 AM								2,915	2.62%
7 AM								5,254	4.73%
8 AM								6,344	5.71%
9 AM								5,463	4.91%
10 AM								5,542	4.98%
11 AM								6,045	5.44%
12 PM								7,012	6.31%
1 PM								7,075	6.36%
2 PM								8,068	7.26%
3 PM								9,441	8.49%
4 PM								9,180	8.26%
5 PM								9,150	8.23%
6 PM								6,174	5.55%
7 PM								4,180	3.76%
8 PM								3,416	3.07%
9 PM								3,013	2.71%
10 PM								2,492	2.24%
11 PM								2,183	1.96%
Number of Crashes	12,295	15,258	16,582	16,809	16,733	18,769	14,746	73	1,725
% of Total Crashes	11.06%	13.72%	14.91%	15.12%	15.05%	16.88%	13.26%		

2015 Manner of Crash/Collision



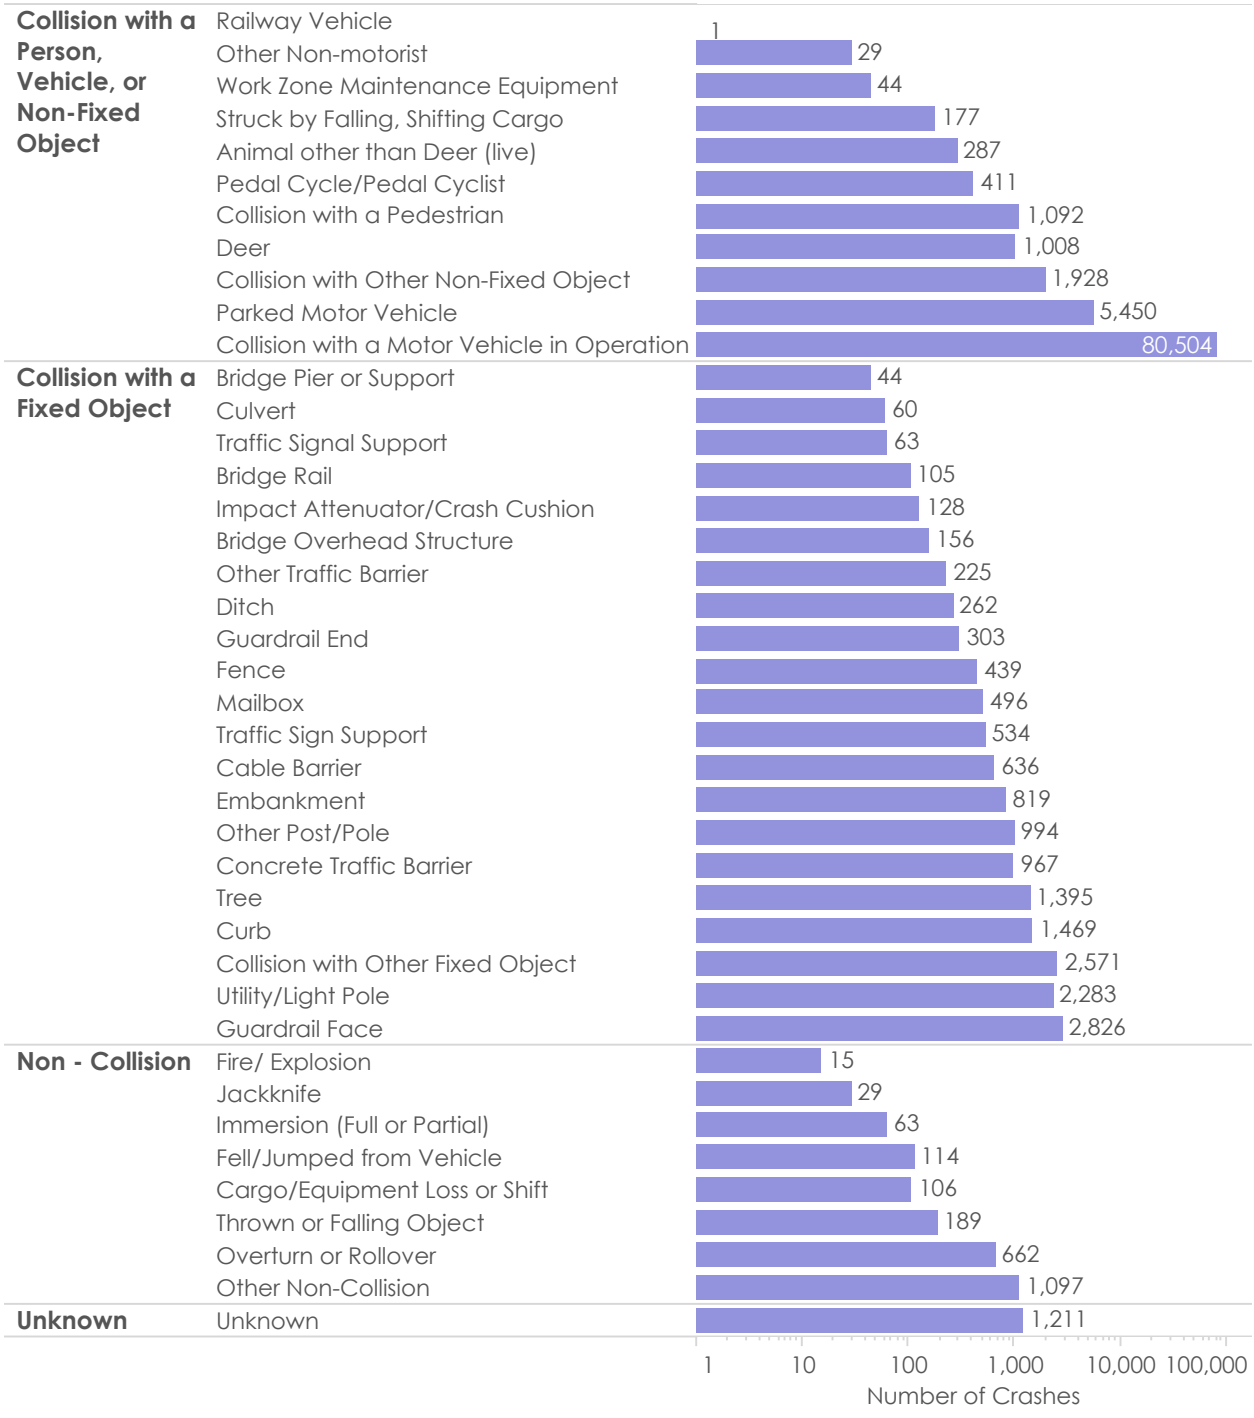
According to the MMUCC Guidelines, manner of impact describes the way in which **multiple** motor vehicles in operation initially collide during a crash. Though normally limited to crashes with multiple motor vehicles, single vehicle crashes are included in the chart and graph as a basis of comparison.

Almost 40 percent of all crashes were rear end crashes. Single vehicle crashes are the next most common, representing approximately 20 percent of crashes.

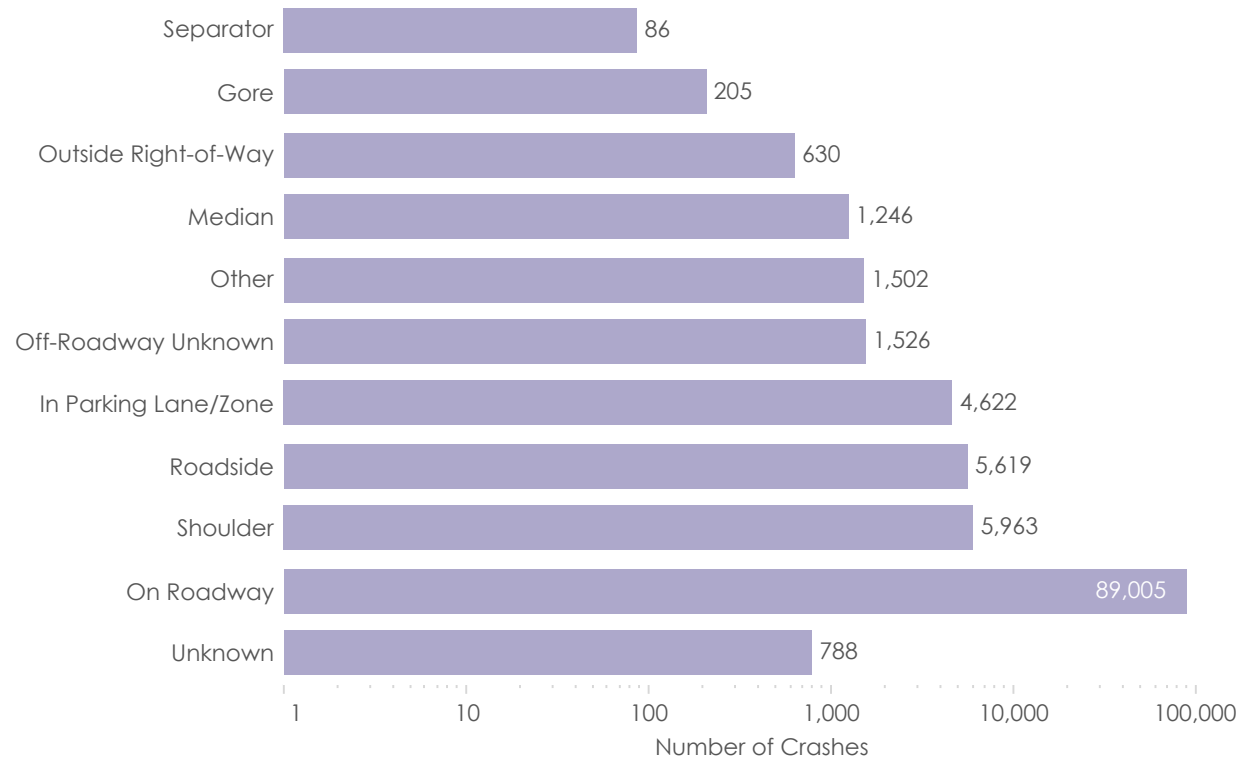
	Number of Crashes	% of Total
Head On	1,163	1.05%
Rear to Rear	1,271	1.14%
Rear to Side	2,626	2.36%
Sideswipe, Different Direction	3,101	2.79%
Other	3,101	2.79%
Sideswipe, Same Direction	14,823	13.33%
Angle	20,115	18.09%
Single Vehicle Crash	21,888	19.68%
Rear End	41,481	37.31%
Unknown	1,623	1.46%
Grand Total	111,192	100.00%

2015 First Harmful Event for the Crash

MMUCC standards describe the 'First Harmful Event' as "the first injury or damage-producing event that characterizes the crash type." 'Collision with a Motor Vehicle in Operation' was the most common first harmful event for 2015. The second and third most common were 'Collision with a Parked Motor Vehicle' and 'Collision with a Guardrail'.



2015 Location of First Harmful Event

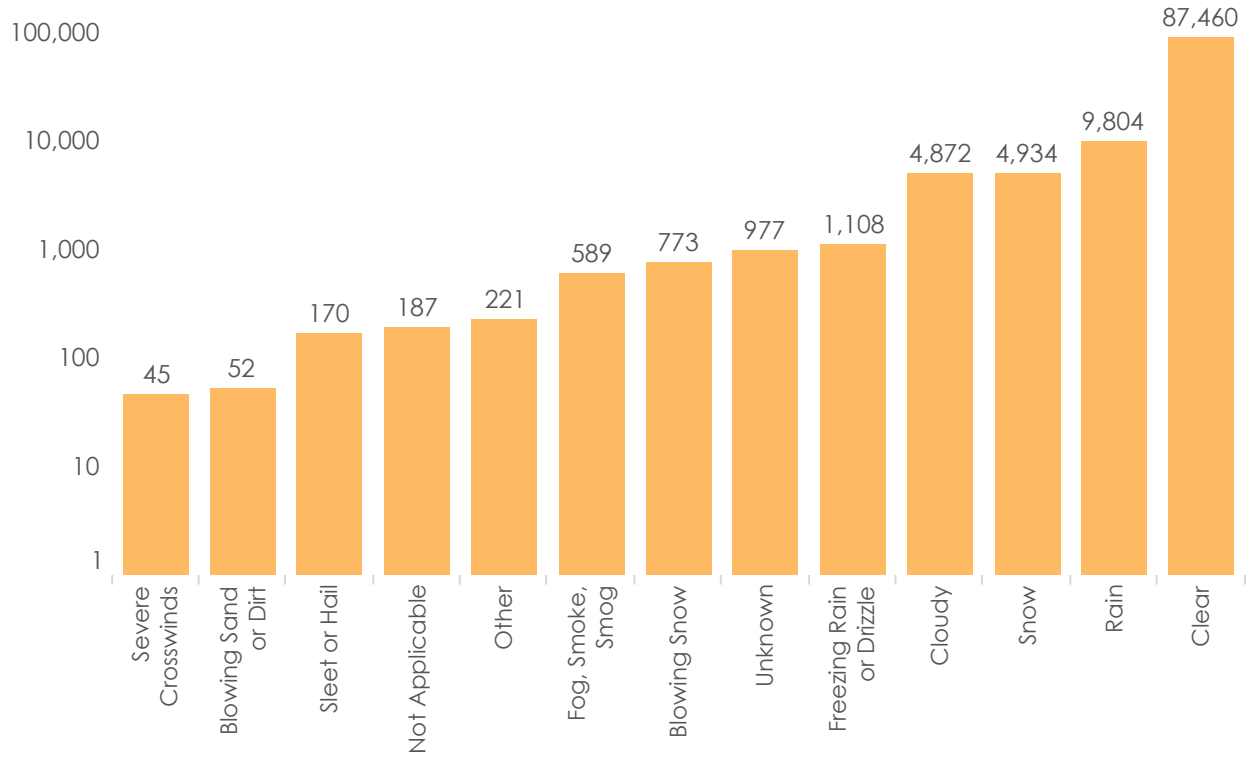


Just over 80 percent of 2015 crashes occurred on a roadway. The second and third most common crash locations were on the road shoulder and roadside, representing 5.73 percent and 5.31 percent, respectively.

Location Of First Harmful Event	Number of Crashes	% of Total
Separator	86	0.08%
Gore	205	0.18%
Other	1,502	1.35%
Outside Right-of-Way	630	0.57%
Off-Roadway Unknown	1,526	1.37%
In Parking Lane/Zone	4,622	4.16%
Median	1,246	1.12%
Roadside	5,619	5.05%
Shoulder	5,963	5.36%
On Roadway	89,005	80.05%
Unknown	788	0.71%
Grand Total	111,192	100.00%

Section III: Roadway and Environment

2015 Crashes by Weather Conditions



The chart above shows the number of crashes by weather condition, and the table below portrays 2015 crashes by weather condition and crash severity. The weather conditions indicates the weather at the time of the crash, but not whether the weather was a contributing factor. Weather conditions for a majority of crashes were clear, with rain and snow being the next most common conditions.

	Fatality	Suspected Serious Injury (A)	Suspected Minor Injury (B)	Possible Injury (C)	Property Damage Only	Unknown Injury	Grand Total
Severe Crosswinds			4	2	39		45

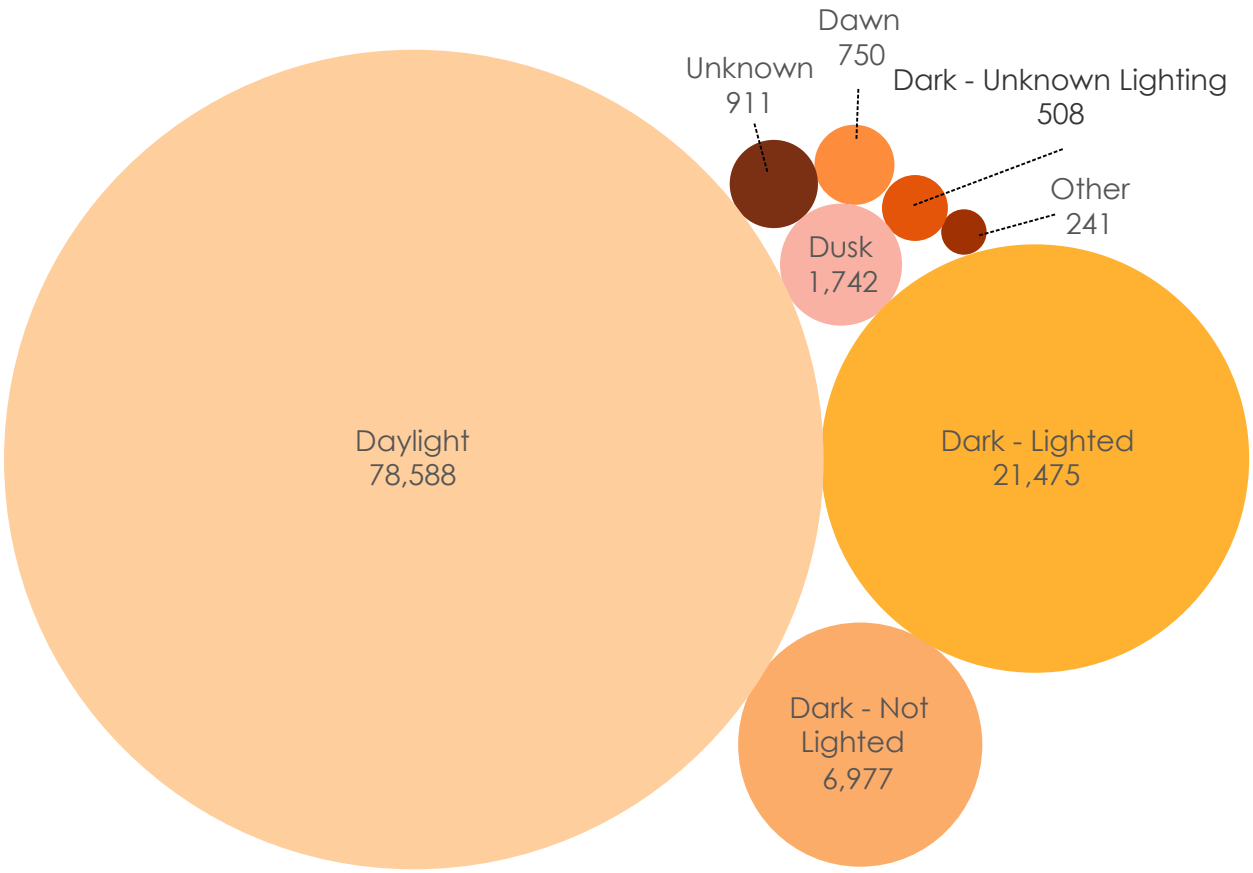
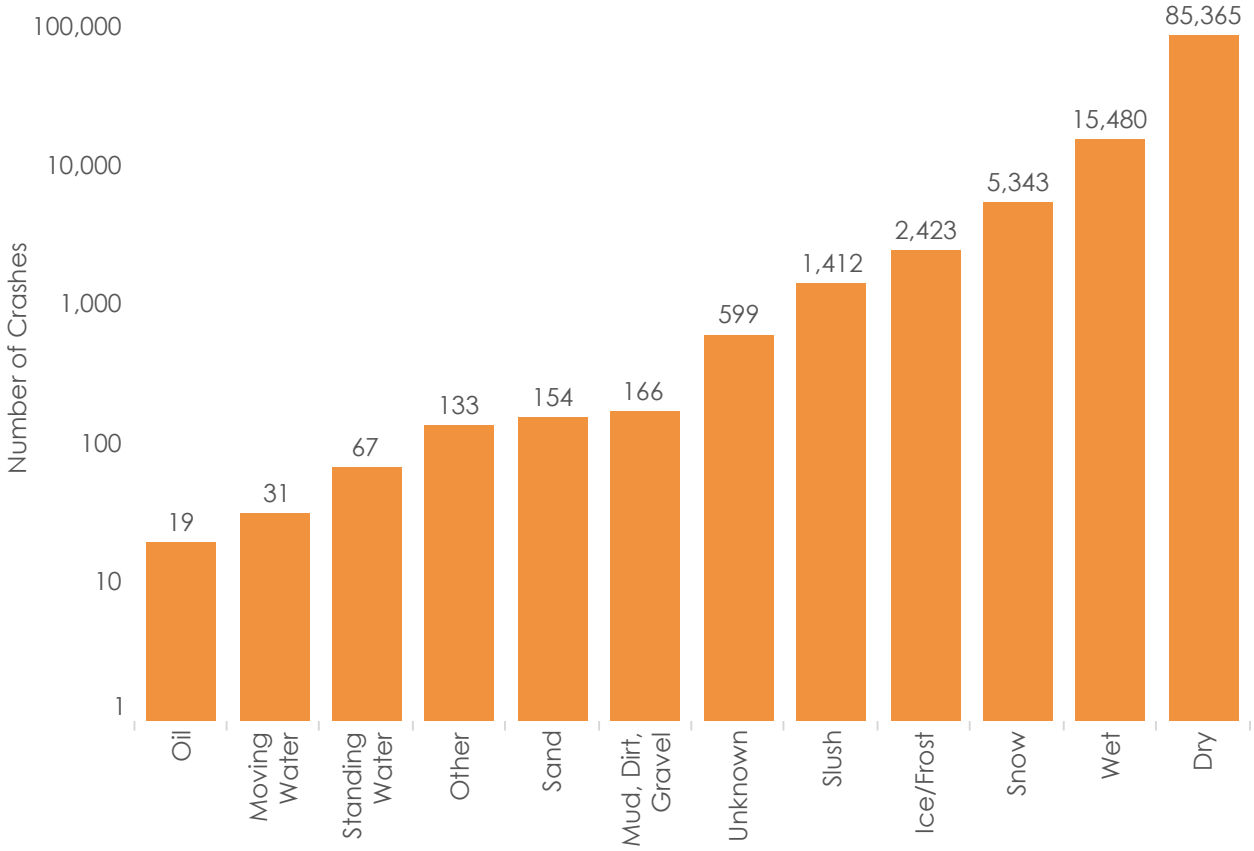
2015 Crashes by Lighting Conditions



Almost 20 percent of 2015 crashes occurred during dark but lighted conditions. These crashes most likely took place at night on illuminated streets or highways. However, more than 70 percent of crashes occurred in the daylight.

	Total Crashes	% of Total
Other	241	0.22%
Dark - Unknown Lighting	508	0.46%
Dawn	750	0.67%
Dusk	1,742	1.57%
Dark - Not Lighted	6,977	6.27%
Dark - Lighted	21,475	19.31%
Daylight	78,588	70.68%
Unknown	911	0.82%
Grand Total	111,192	100.00%

2015 Crashes by Road Surface Conditions



Traffic Surface Conditions records the road conditions at the time of crash for all crashes. It does not indicate if those conditions were a contributing factor or not. Most crashes occur on dry surfaces. However, other surface conditions appear to be more prevelant in crashes involving only a single vehicle.

Traffic Surface Conditions by Number of Vehicles Involved

	1		2		3		4+	
	Total Crashes	% of Total	Total Crashes	% of Total	Total Crashes	% of Total	Total Crashes	% of Total

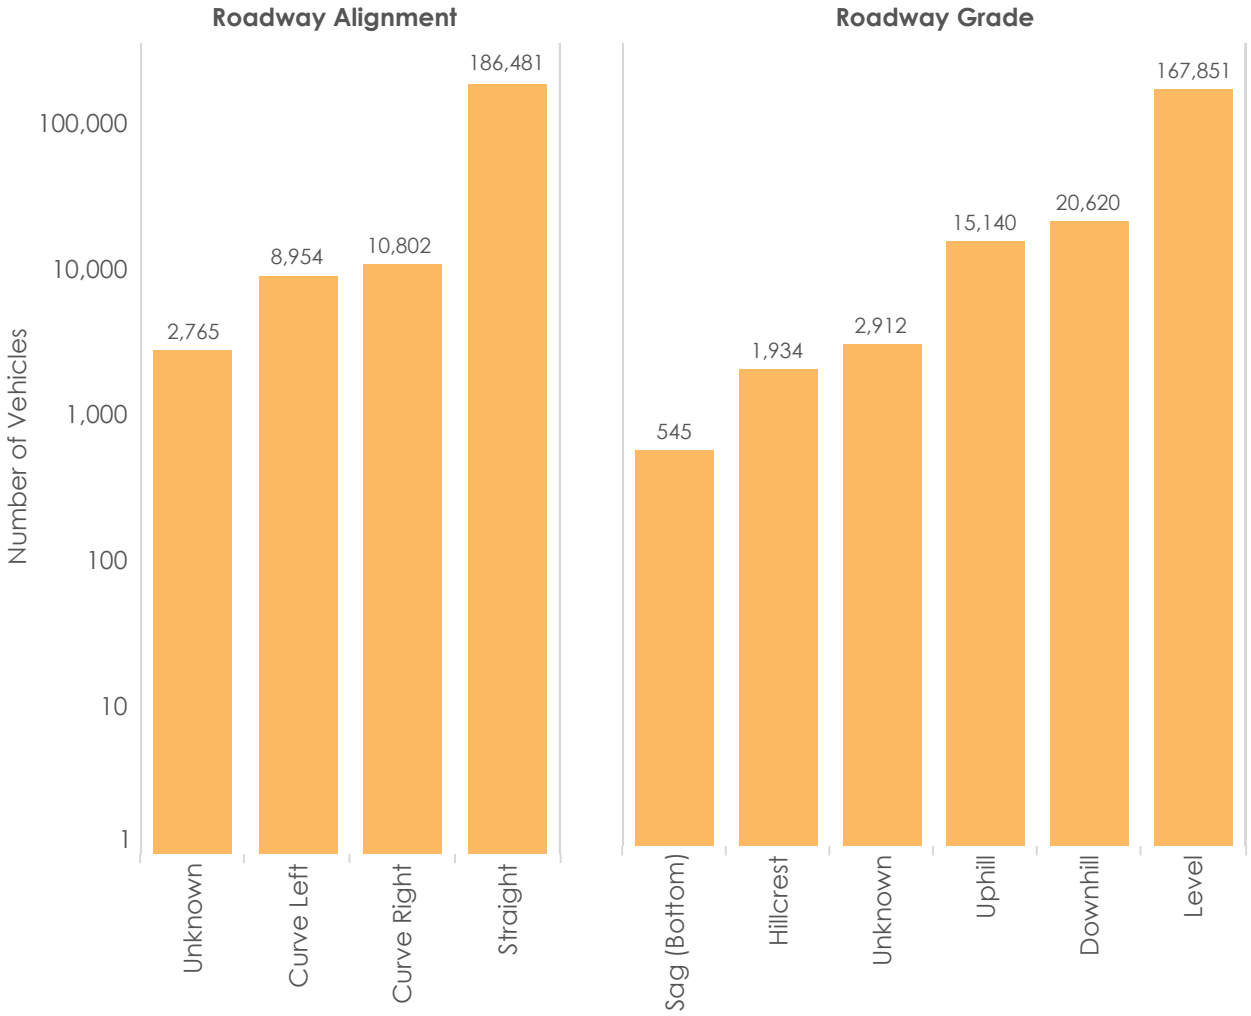
2015 Vehicles by Roadway Alignment and Grade



Roadway grade and roadway alignment are collected for each motor vehicle in a crash, so the totals shown here represent the number of vehicles as opposed to the number of crashes. Crashes occurring on straight roads and level grades are the most common for alignment and grade respectively.

	Count of Vehicles	% of Total Vehicles
Curve Left	8,954	4.28%
Curve Right	10,802	5.17%

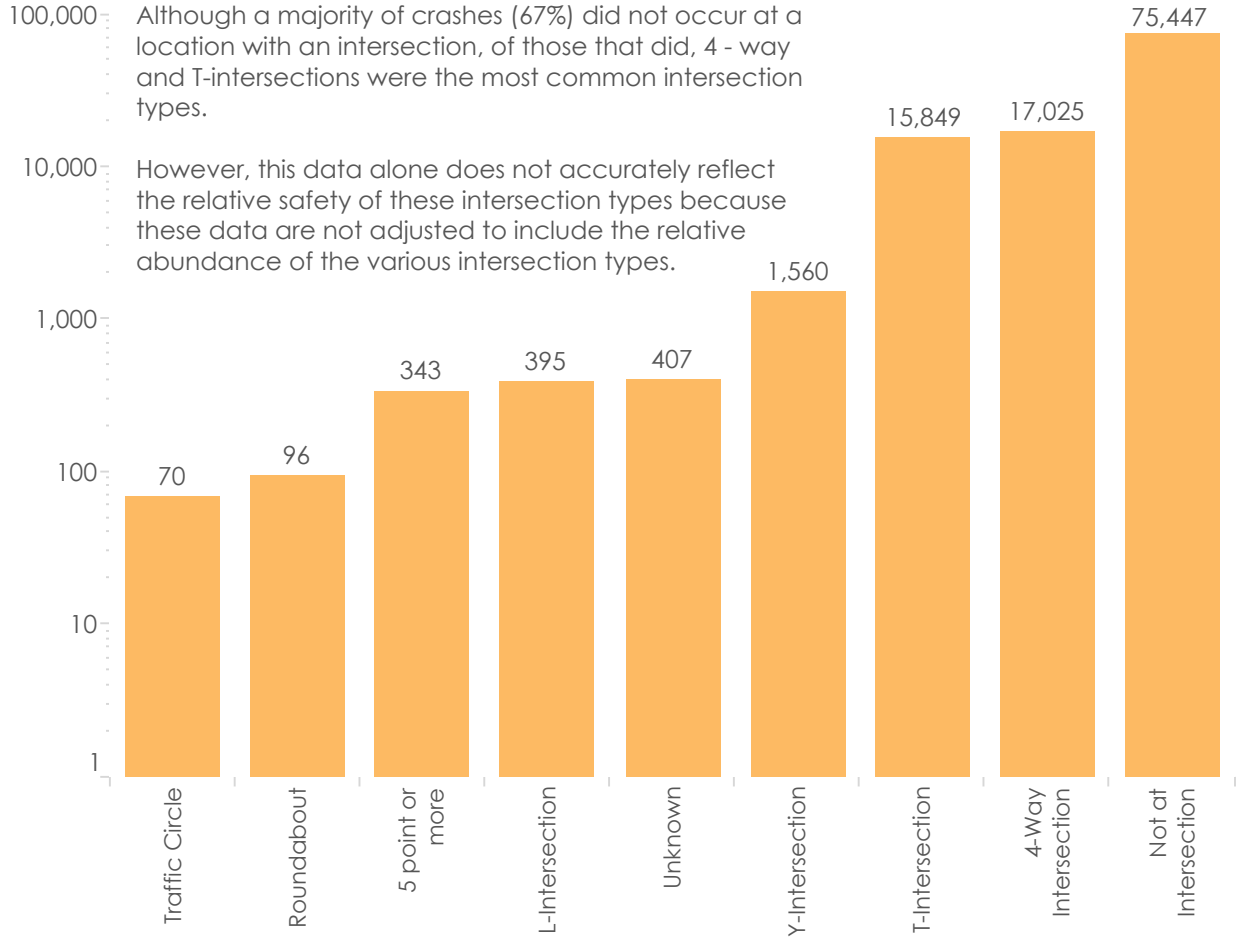
2015 Crashes by Intersection Type

Although a majority of crashes (67%) did not occur at a location with an intersection, of those that did, 4 - way and T-intersections were the most common intersection types.

However, this data alone does not accurately reflect the relative safety of these intersection types because these data are not adjusted to include the relative abundance of the various intersection types.



Intersection Crashes by Number of Vehicles Involved

	1		2		3		4+

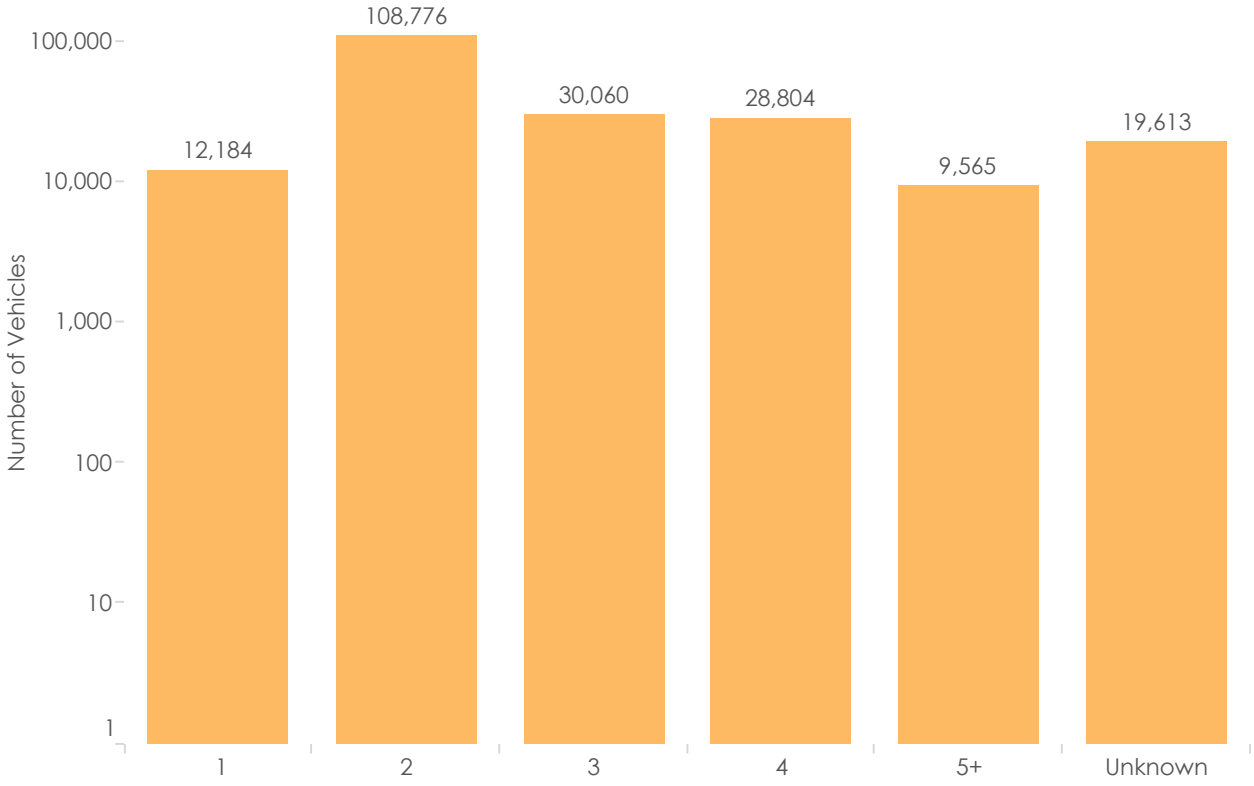
2015 Vehicles by the Number of Lanes



This page details the number of vehicles involved in crashes by the number of lanes in the roadway. The number of lanes is associated with vehicles on the crash reporting form because each vehicle involved in a collision could be traveling from different roadways that may have differign number of lanes, such as at an intersection or a merge.

Across the state, crashes occurred most often on two-lane roads. This is the case for all route classes except highways, where the most common was three lanes.

Number of Vehicles by Route Class and Number of Lanes

	Interstate		US Route		State		Local		Unknown	
1	1,780	6.18%	495	2.55%	3,145	4.88%	5,128	6.07%	1,636	13.83%

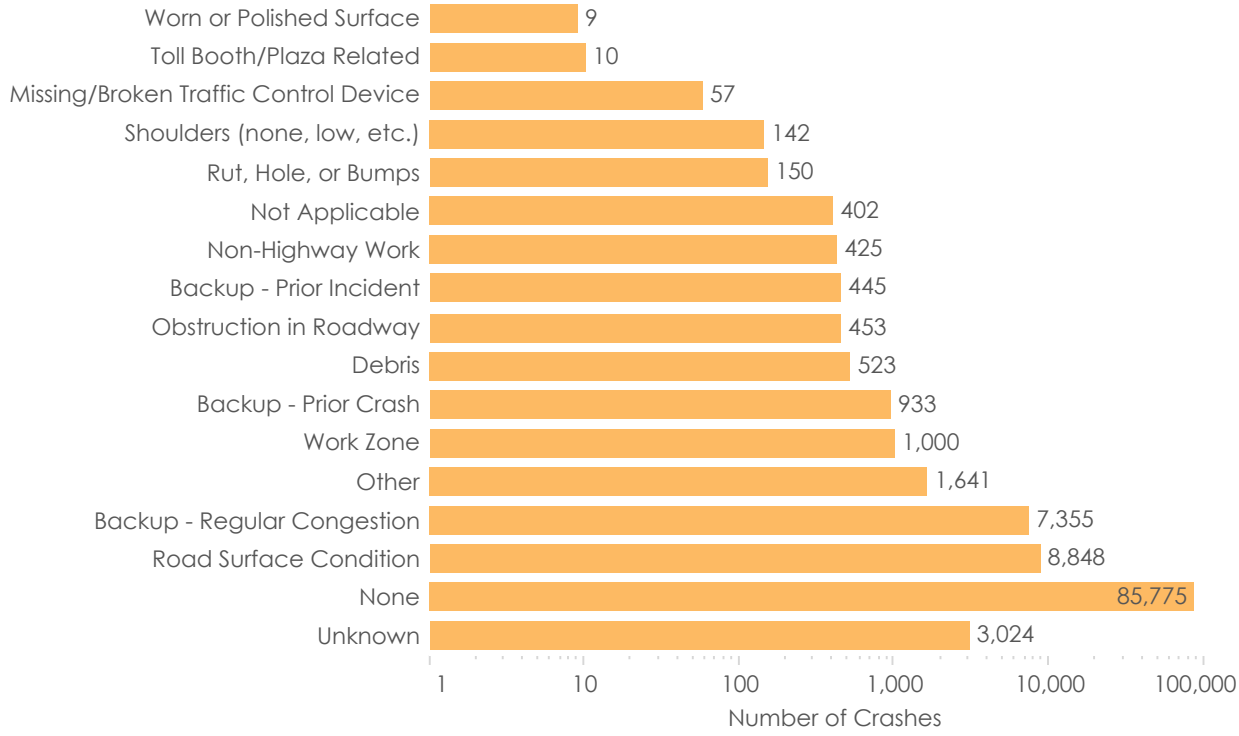
2015 Contributing Circumstances: Road



'Contributing Circumstances: Road' refers to factors specific to the road conditions that are deemed by the officer to have contributed to the crash. This includes both attributes related to the road itself, such as holes or surface conditions, as well as backups and obstructions in the roadway. A majority of crashes (77.14%) had no roadway circumstances that contributed to the crash. Road surface conditions and backup related to regular congestion were the most common contributing circumstances.

	Total Crashes	% of Total
Worn or Polished Surface	9	0.01%
Toll Booth/Plaza Related	10	0.01%
Missing/Broken Traffic Control Device	57	0.05%
Shoulders (none, low, etc.)	142	0.13%

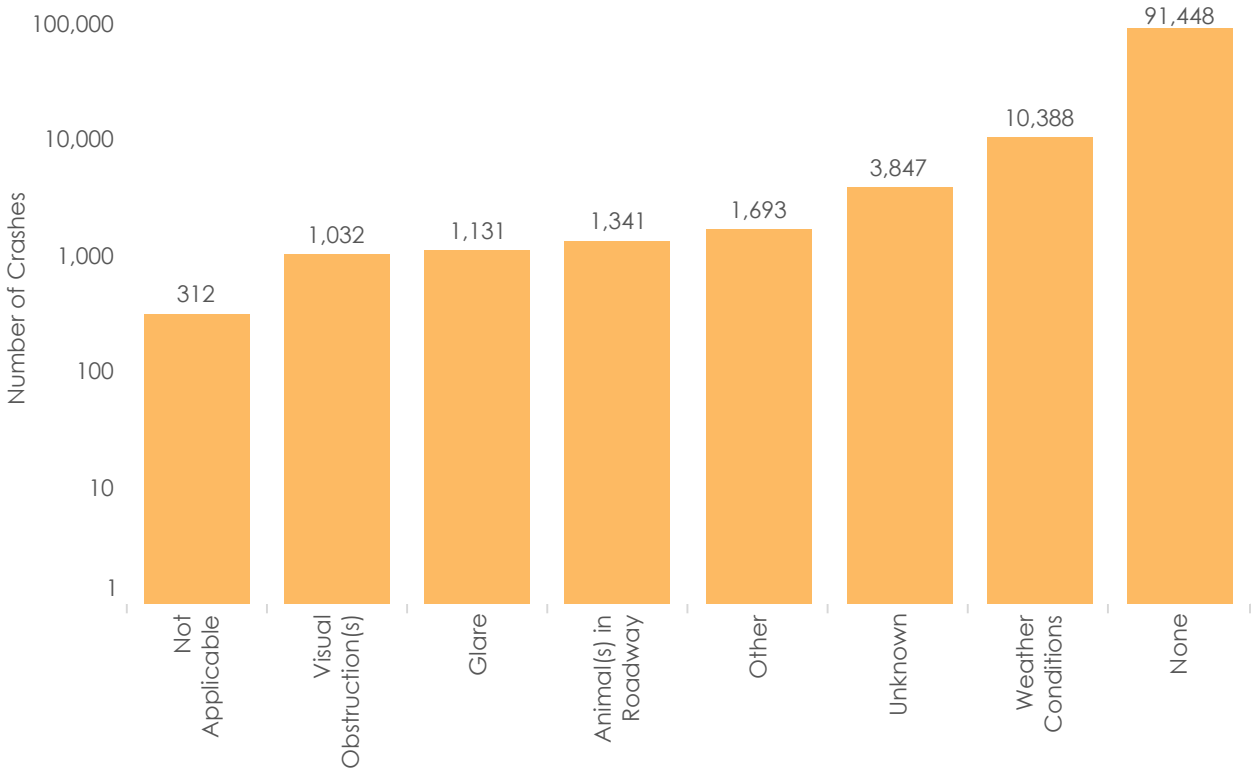
Not Applicable	402	0.36%
Non-Highway Work	425	0.38%
Backup - Prior Incident	445	0.40%
Obstruction in Roadway	453	0.41%
Debris	523	0.47%
Backup - Prior Crash	933	0.84%
Work Zone	1,000	0.90%
Other	1,641	1.48%
Backup - Regular Congestion	7,355	6.61%
Road Surface Condition	8,848	7.96%
None	85,775	77.14%
Unknown	3,024	2.72%
Grand Total	111,192	100.00%

2015 Contributing Circumstance: Environment



MMUCC provides the following as possible environmental conditions that can potentially contribute to a crash:

Weather Conditions - indicative of recorded weather conditions contributing to the crash
Visual Obstruction(s) - an object (bush, tree, etc.) that blocks the driver's sight, thus contributing to the crash
Glare - harsh or bright light that impairs a driver's vision
Animal(s) in Roadway - live wild or domestic animals, excluding animals pulling a conveyance being ridden

Adverse weather conditions were a contributing factor in nearly ten percent of crashes in 2015.

	Total Crashes	% of Total
Not Applicable	312	0.28%
Visual Obstruction(s)	1,032	0.93%
Glare	1,131	1.02%
Animal(s) in Roadway	1,341	1.21%
Other	1,693	1.52%
Weather Conditions	10,388	9.34%
None	91,448	82.24%
Unknown	3,847	3.46%

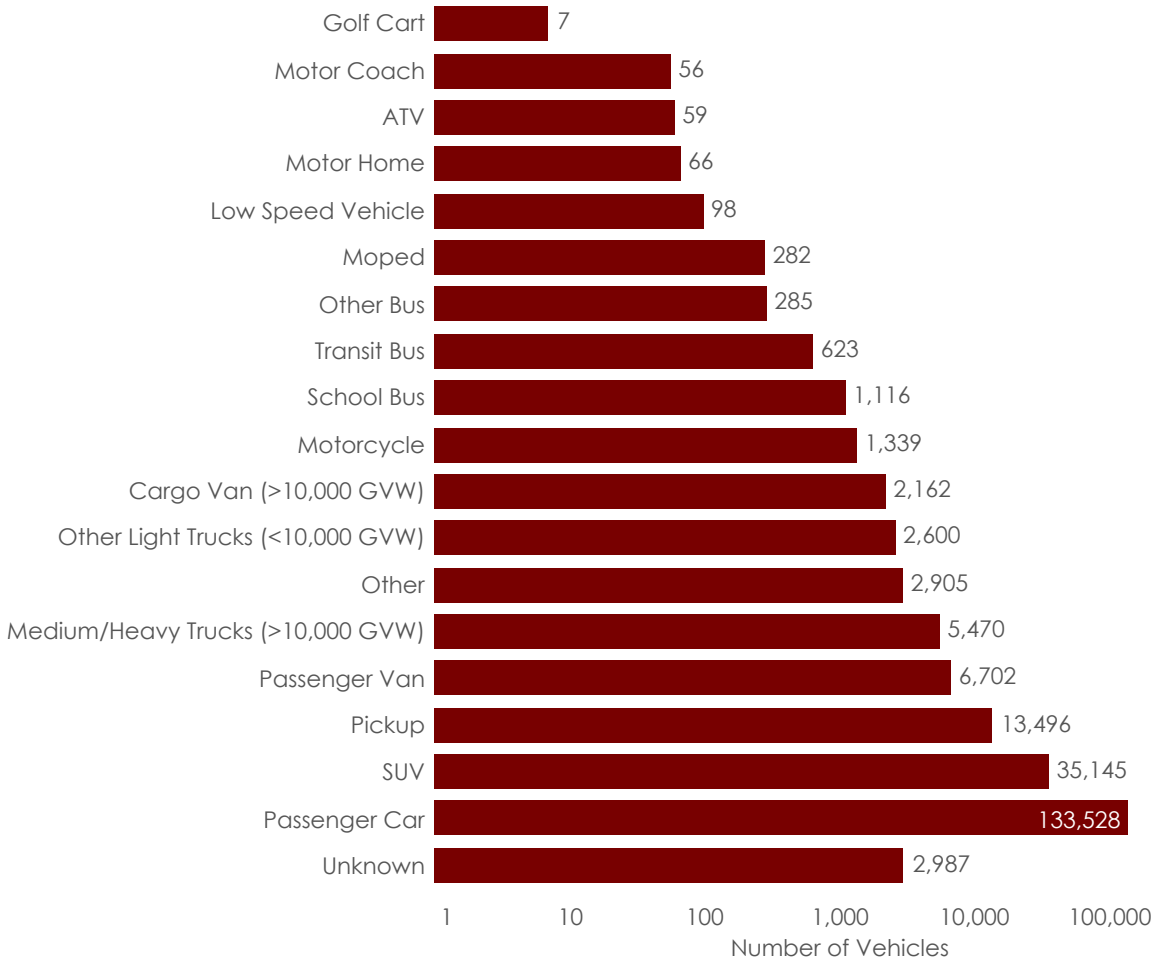
Medium/Heavy Trucks (>10,000 GVW)	2.62%
Passenger Van	3.21%
Pickup	6.46%
SUV	16.82%
Passenger Car	63.92%
Unknown	1.43%
Grand Total	100.00%

Passenger vehicles were the most common vehicle in 2015 crashes and represent more than half of all involved vehicles.

Pickup trucks and SUVs were the second and third most common vehicle types in 2015 crashes, representing 6.47 percent and 16.81 percent, respectively.



2015 Vehicle Actions

'Vehicle Action' refers to the specific maneuver of the vehicle prior to the beginning of the sequence of events of the crash. The top five most common vehicle actions all involved basic driving manuevers. The majority of vehicles were either driving straight ahead, stopped in traffic or slowing.

	Count of Vehicles	% of Total Vehicles
Traveling in Bike Lane	10	0.00%
Overtaking/Passing a Cyclist	50	0.02%

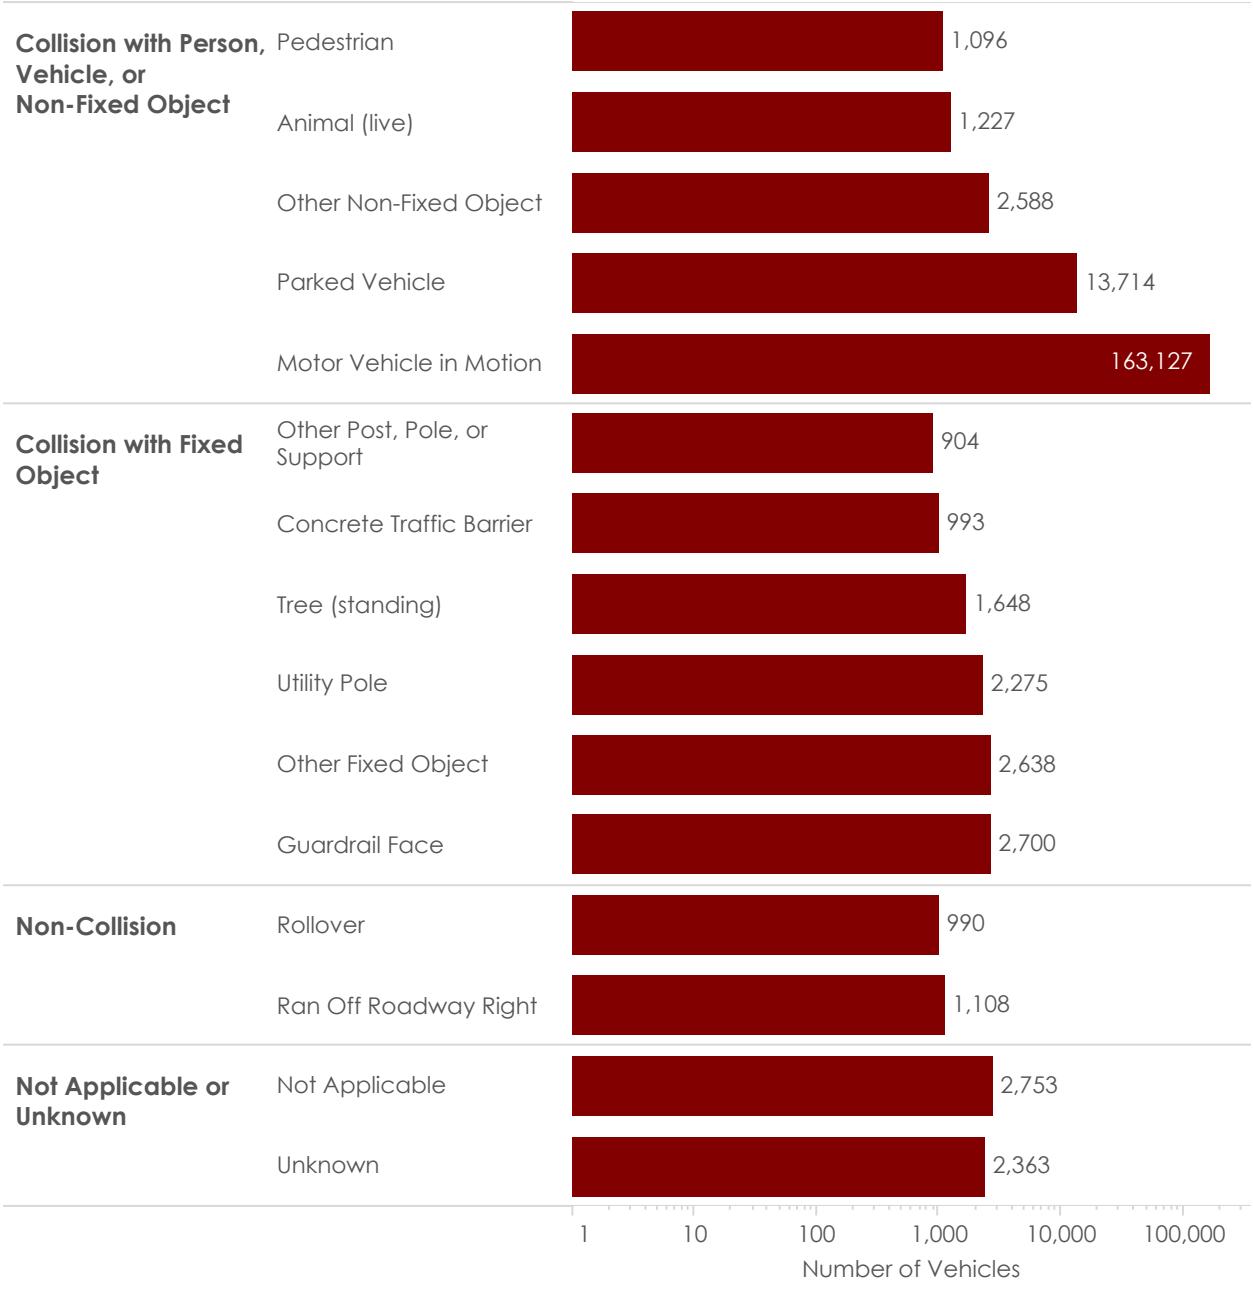
2015 Most Common First Harmful Events for Vehicles

The following graph displays the fifteen most common first harmful events' for all vehicles involved in 2015 crashes. Most vehicles were involved in a collision with another vehicle, while it was parked or also in motion.

The first harmful event for vehicles is different than the first harmful event for the crash because this variable pertains to the individual events of each vehicle involved in a crash. Vehicles involved in a collision may be traveling from different directions and may have encountered different obstacles prior to the crash event.



2015 Contributing Circumstances: Vehicle

'Contributing Circumstances: Vehicle' refers to pre-existing motor vehicle defects or poor maintenance conditions that may have contributed to the crash.

The graph and subsequent chart below displays the total number of vehicles involved in 2015 Connecticut crashes by pre-existing defects or maintenance conditions that may of contributed to the crash.

	Count of Vehicles	% of Total Vehicles
Pothole, Cracked or Failing Pavement	7	0.00%
Wipers	12	0.01%
Exhaust System	14	0.01%

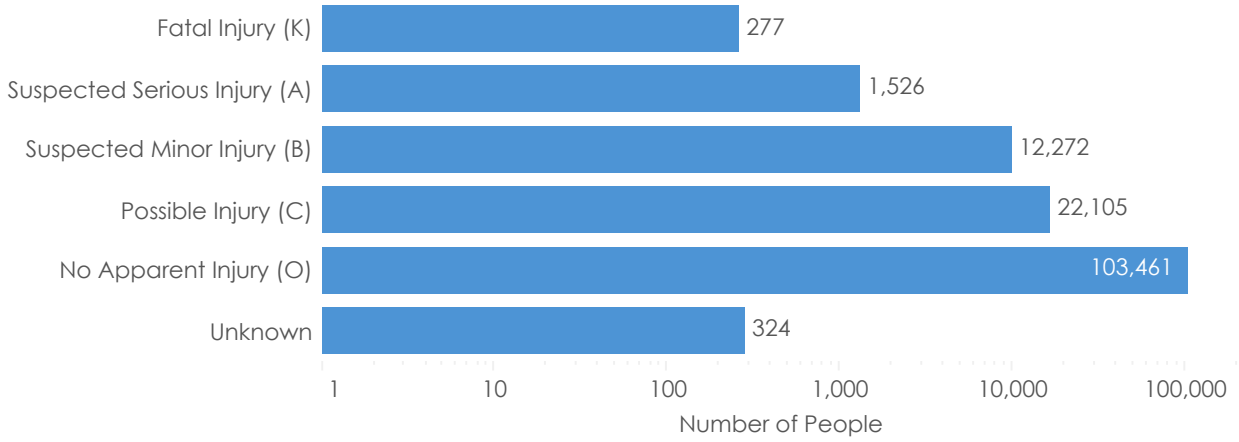
Section III: Persons

2015 Fatalities and Injuries Per Crash

Injury Status of People



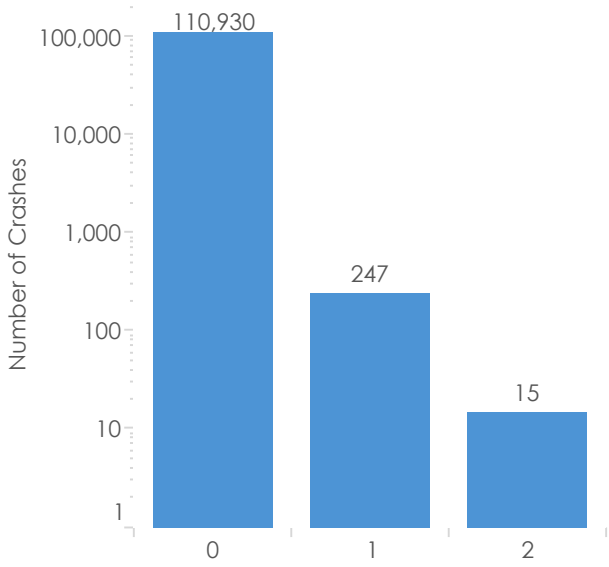
When a person is injured in a motor vehicle crash, their injury is assigned a classification letter.

"**K**" refers to a deceased crash victim.

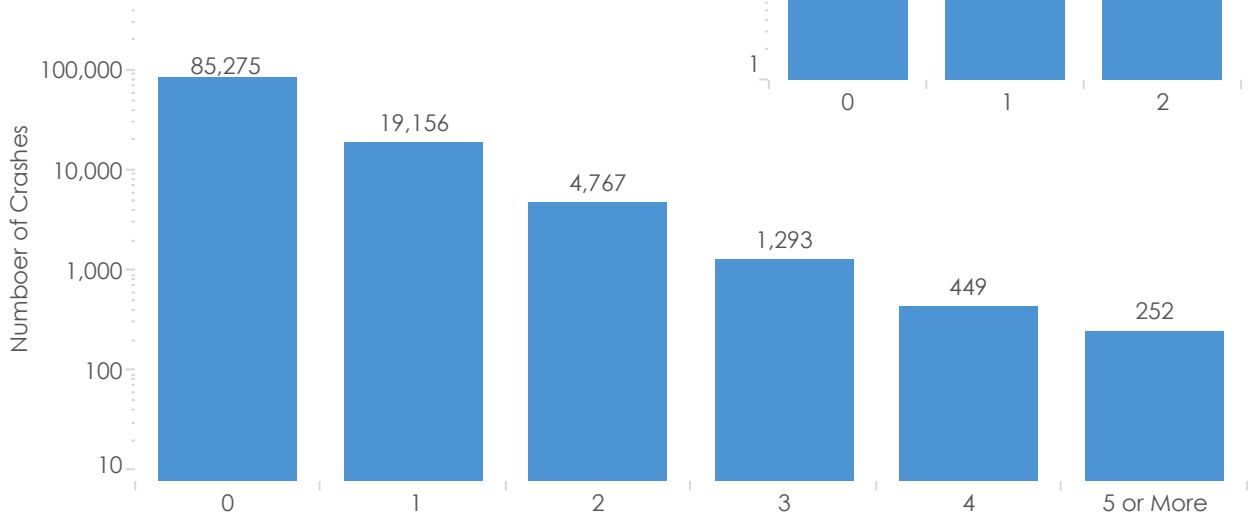
"**A**","**B**", & "**C**" represent Serious, Minor, and Possible injuries, respectively.

"**O**" indicates that the person exhibited no injuries that were apparent to the officer on scene, which is true for Property Damage Only crashes.

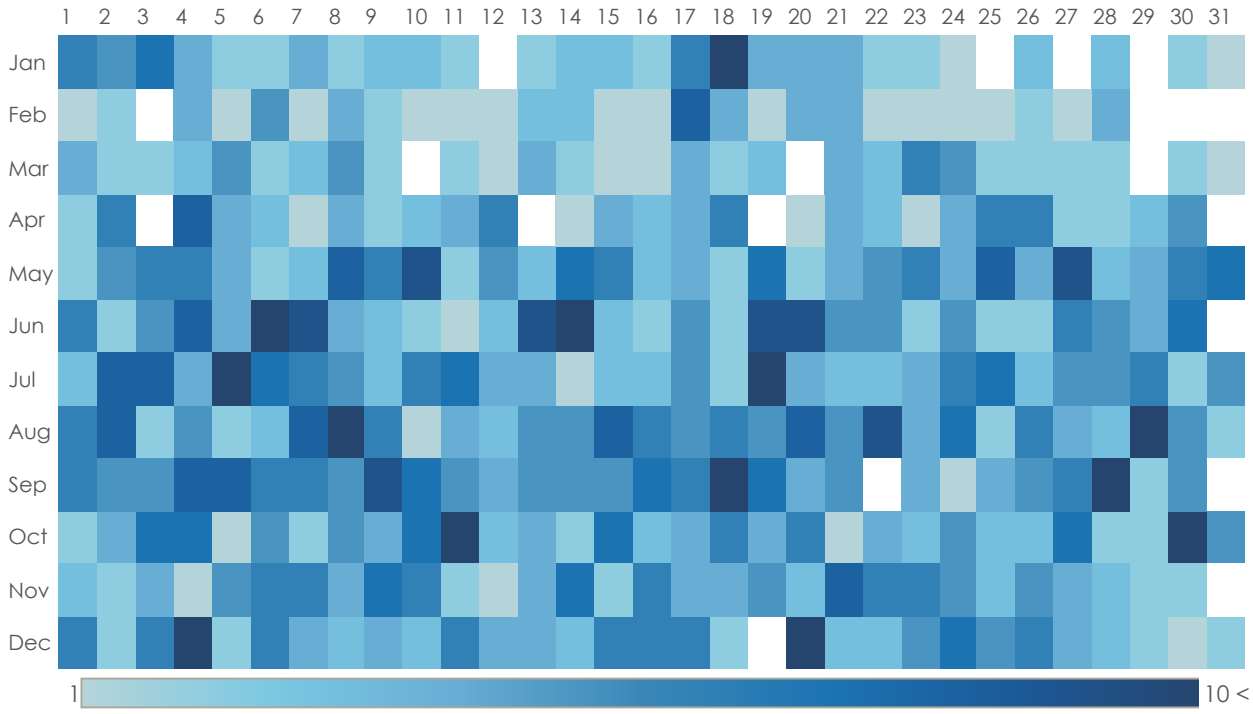
Fatalities per Crash



Injuries per Crash



2015 Fatal "K" & Serious "A" Injuries by Day of the Month



The heatmap above shows the number of crashes for each day of 2015 and the accompanying table provides the crash totals for each month. The heatmap indicates that more severe injuries were experienced around some holiday periords such as MLK Day on January 18th and near the 4th of July.

blank white spaces indicate no crashes occurred during that time period

However, victims of crashes occurring in the months of July to September experienced the most severe injuries in 2015. This could be due to increased speeds during milder weather that result in more serious injuries.

Monthly Totals of Fatalities and Serious Injuries

	Total K & A Injuries	% of Total K & A Injuries
January	94	6.14%
February	63	4.11%
March	77	5.03%
April	98	6.40%
May	152	9.92%
June	151	9.86%
July	159	10.38%
August	166	10.84%
September	168	10.97%
October	142	9.27%
November	126	8.22%
December	136	8.88%
Grand Total	1,532	100.00%

2015 Involved Persons by Gender & Person Type

		Female	Male	Unknown	Grand Total
Drivers	Number of Total People	79,055	107,113	10,785	196,953
	% of Total People	40.14%	54.39%	5.48%	100.00%
Passengers	Number of Total People	33,894	29,692	3,349	66,935
	% of Total People	50.64%	44.36%	5.00%	100.00%
Other (Includes Non-Motorists)	Number of Total People	879	1,395	54	2,328
	% of Total People	37.76%	59.92%	2.32%	100.00%

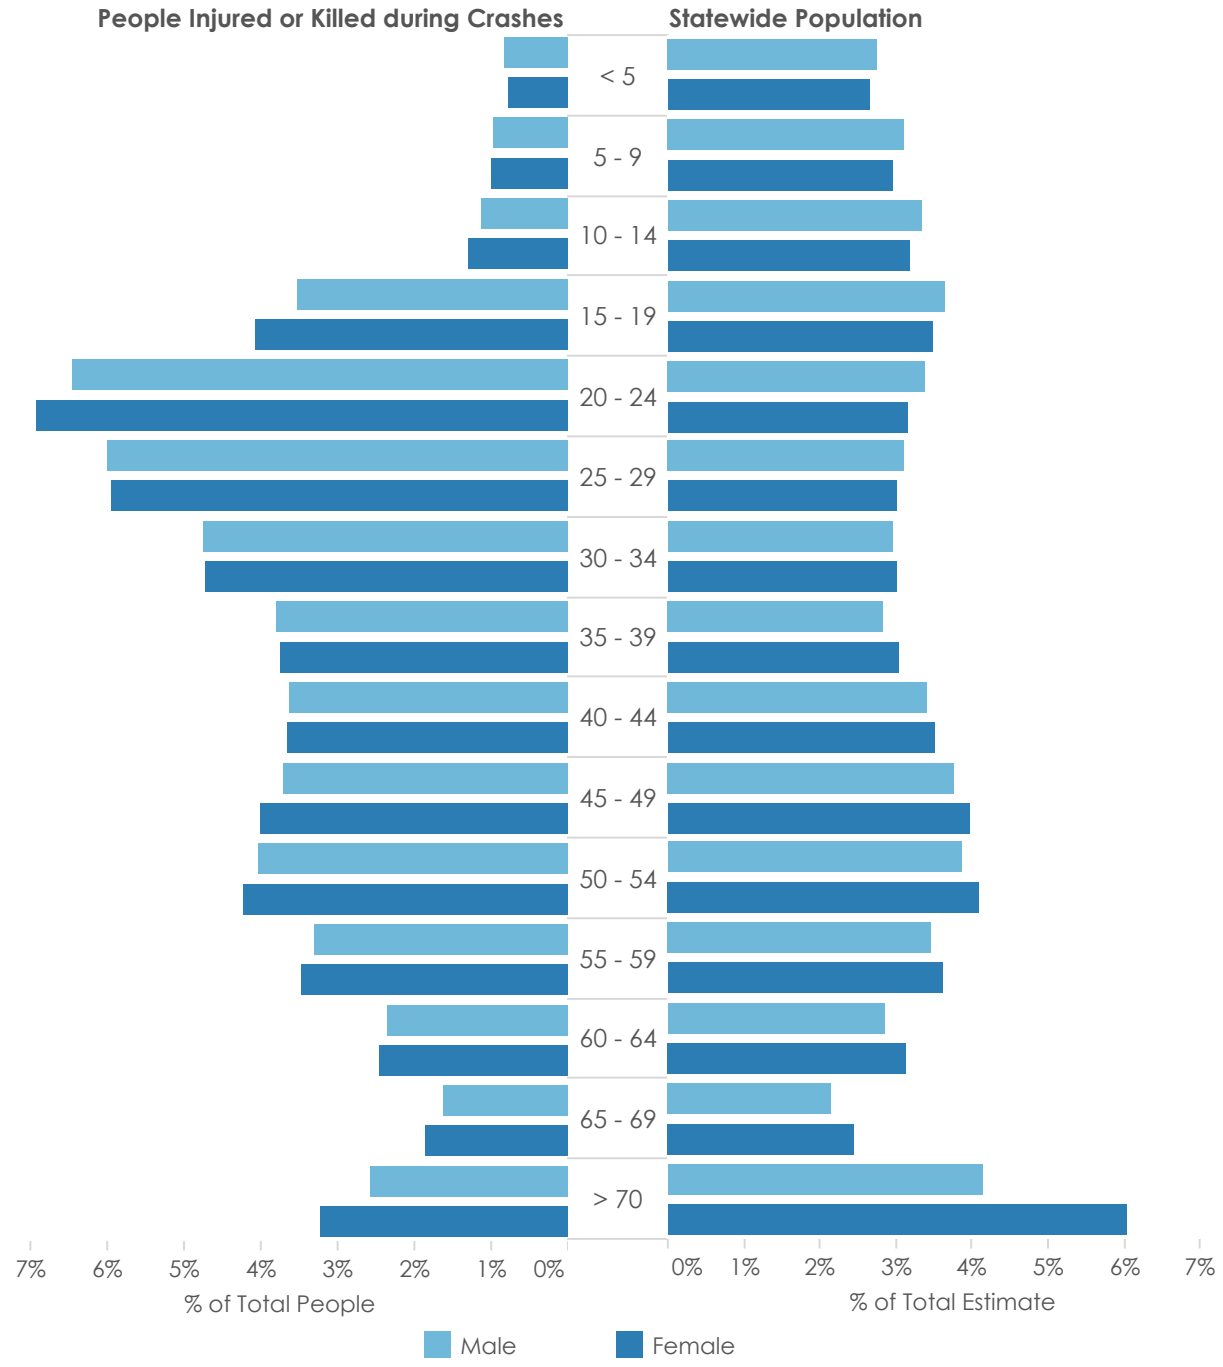
Age and Gender Distribution of People Injured or Killed in Crashes vs. the Statewide Population



The figure above compares the age distribution for those injured (A, B, C, and K injuries) in crashes in Connecticut on the left with the age distribution of the entire state population. Note that the bars represent the percentage of the total, not an absolute count. People aged 15 to 34 make up a larger proportion of the injuries than they represent of the total population. Population data for this figure is courtesy of the US Census Bureau's American Community Survey.

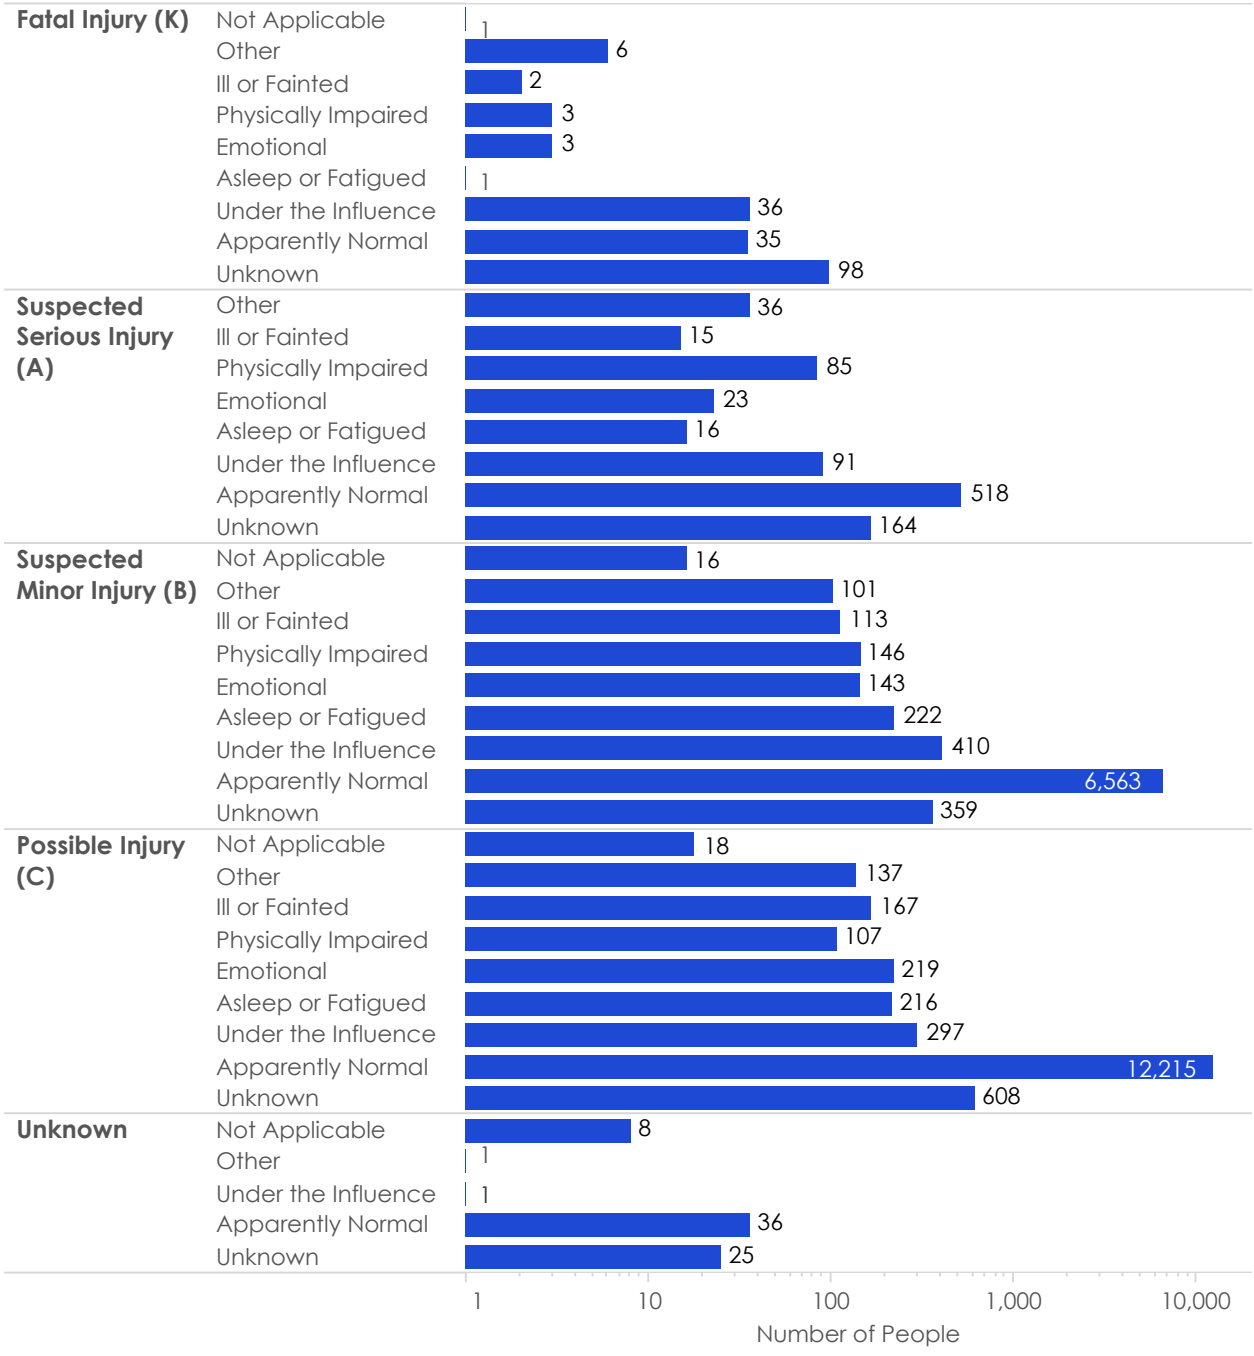
2015 Injury Status by Condition at Time of Crash

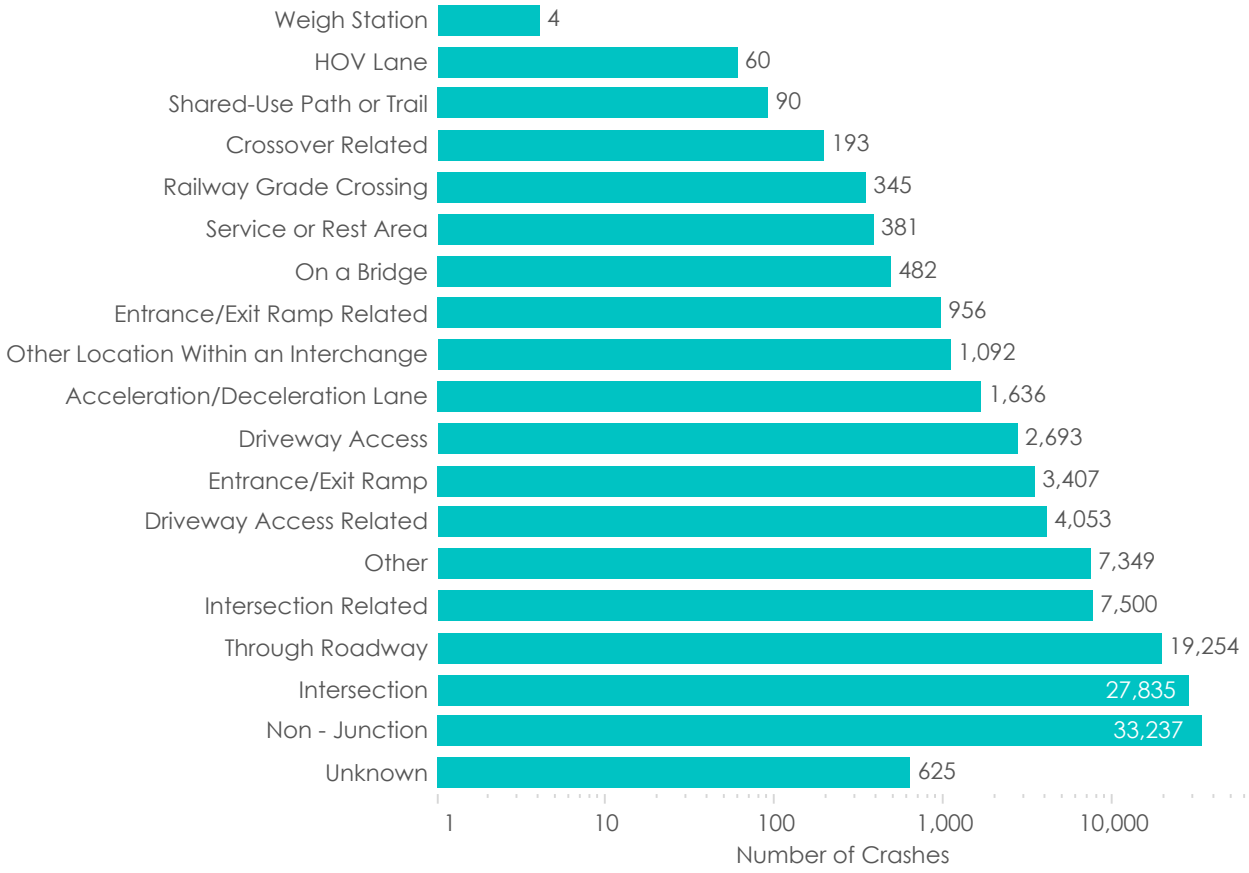
Condition at Time of Crash refers to any relevant physical condition of the **motorist** or **non-motorist** that is directly related to the crash.

The graph below displays the condition of all motorists and non-motorists by their injury classification; all other person types are excluded. Under the Influence of drugs or alcohol is the most common known condition for all injury classifications.



Section IV: Crash Emphasis Areas

2015 Crash Specific Location



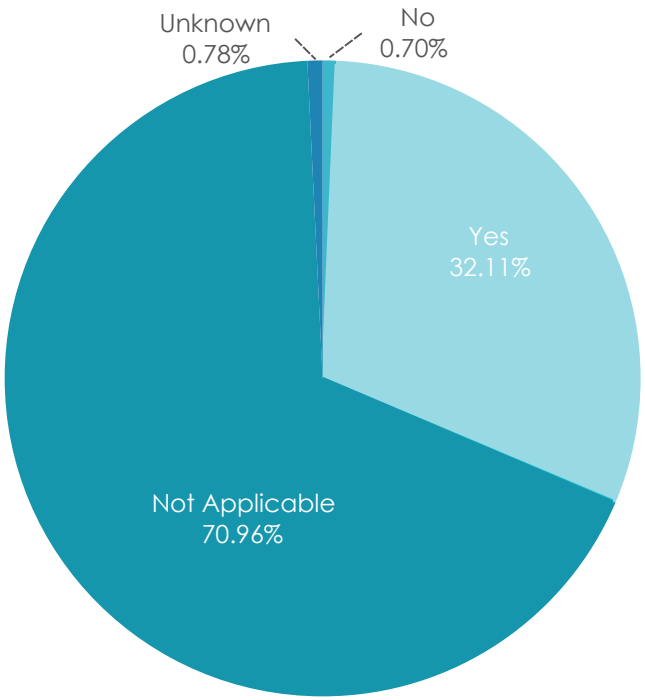
Crash Specific Location	Number of Crashes	% of Total
Weigh Station	4	0.00%
HOV Lane	60	0.05%
Shared-Use Path or Trail	90	0.08%
Crossover Related	193	0.17%
Railway Grade Crossing	345	0.31%
Service or Rest Area	381	0.34%
On a Bridge	482	0.43%
Entrance/Exit Ramp Related	956	0.86%
Other Location Within an Interch..	1,092	0.98%
Acceleration/Deceleration Lane	1,636	1.47%
Driveway Access	2,693	2.42%
Entrance/Exit Ramp	3,407	3.06%
Driveway Access Related	4,053	3.65%
Other	7,349	6.61%
Intersection Related	7,500	6.75%
Through Roadway	19,254	17.32%
Intersection	27,835	25.03%
Non - Junction	33,237	29.89%
Unknown	625	0.56%
Grand Total	111,192	100.00%

'Crash Specific Location' refers to the roadway features and surrounding infrastructure of the area where the crash occurred.

Twenty-five percent of 2015 crashes occurred at an intersection.

2015 Crashes by Traffic Control Device Type

Crashes by Traffic Control Device Status

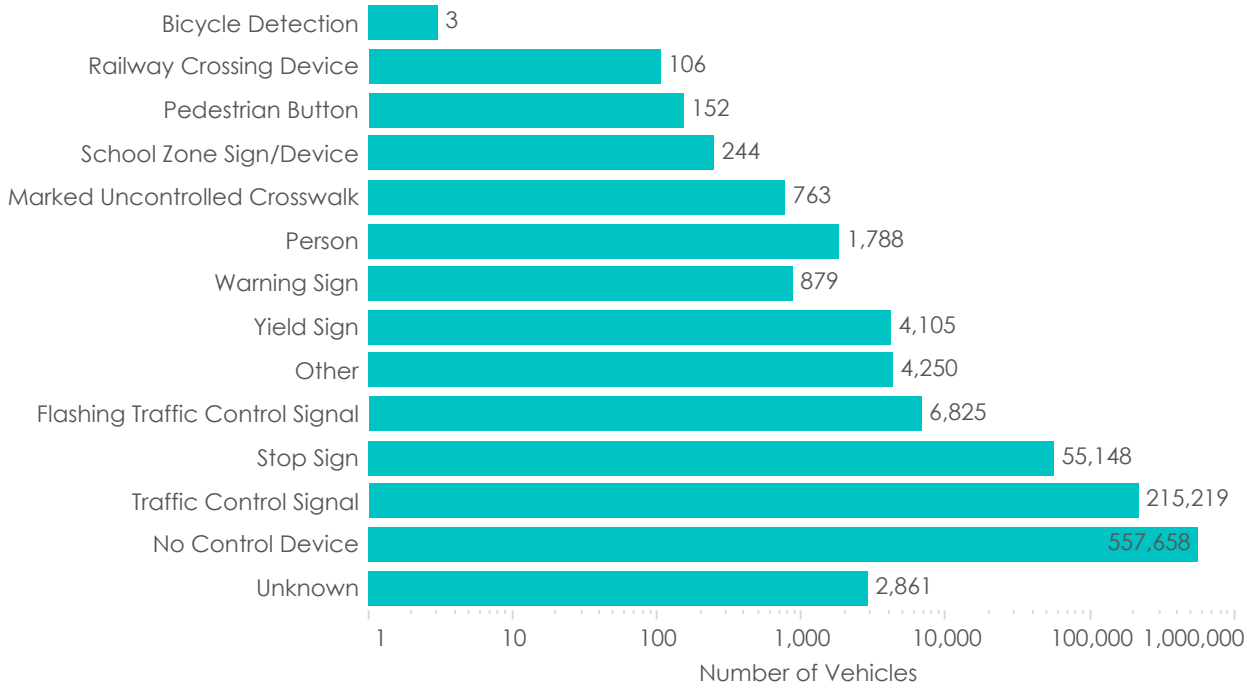


Traffic Control Device Type is one of many new categories now collected on the revised crash report form in Connecticut. This category can include stop and yield signs, flashing traffic control signal or a crossing guard. Traffic control device type can differ for multple vehicles within the same crash event and there fore is collected at the vehicle level.

'Traffic Control Device Status' refers to whether or not the traffic control device, if present, was functional. In just over 70 percent of crashes, the traffic control device status was found to not be applicable, which could mean that there was not one present or that the description of functional was not approriate for the type of traffic control device (i.e. flagger)

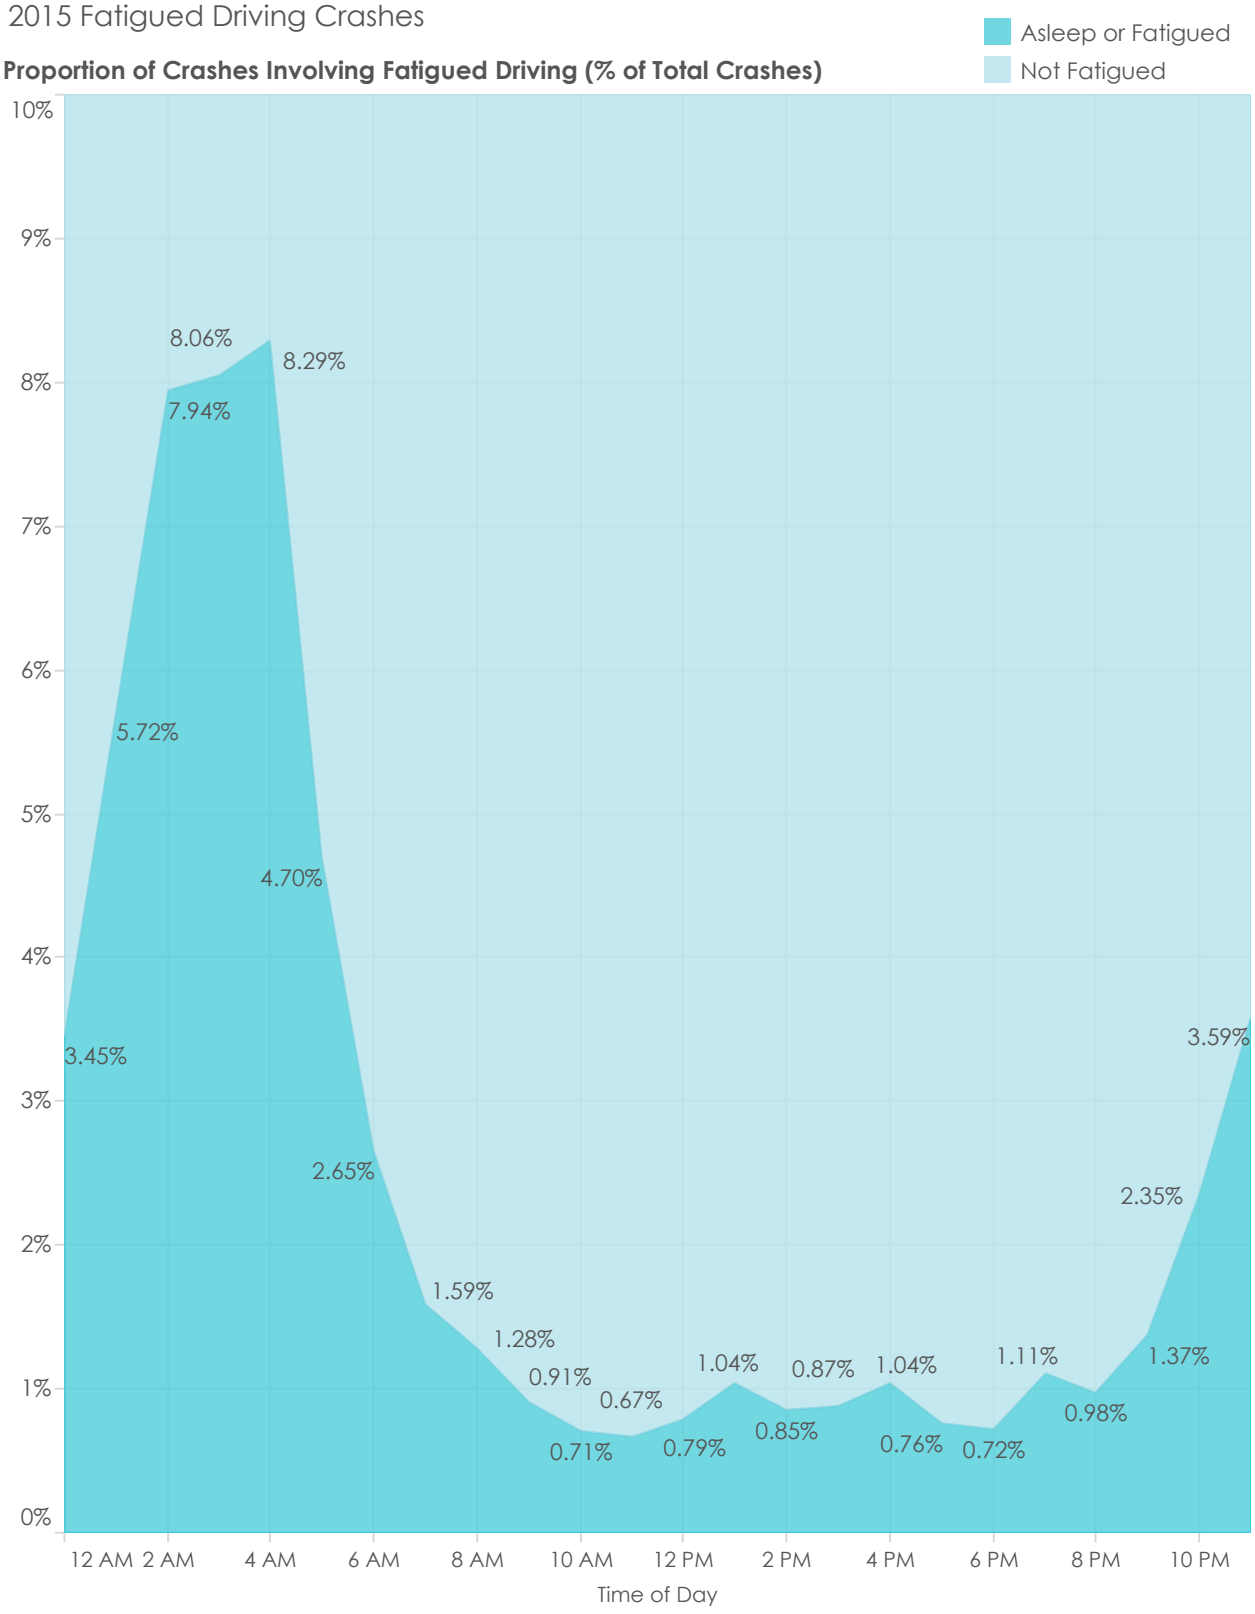
Signalized traffic controls were the most common control device type present in 2015 crashes, accounting for almost 75 percent of all crashes where a control device was present.

Vehicles by Traffic Control Device Type



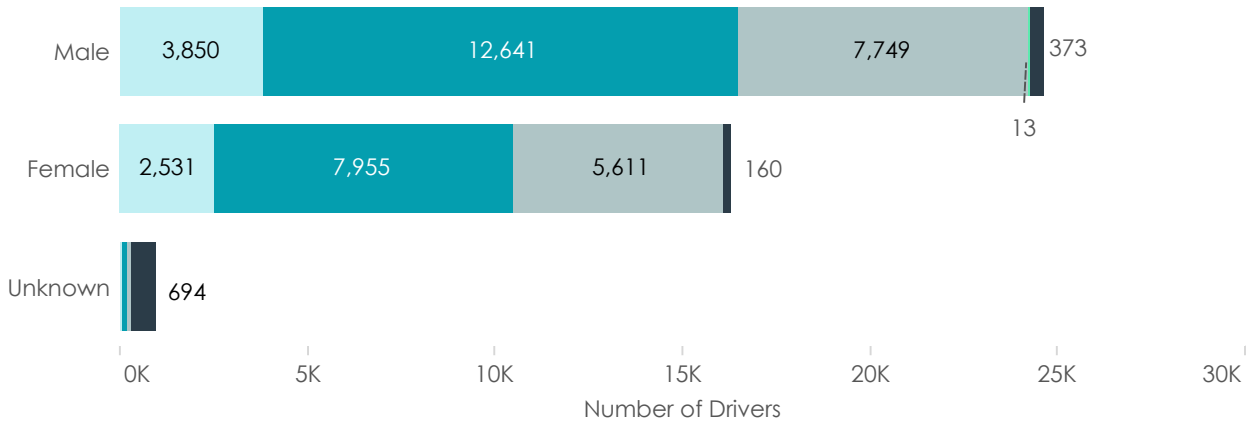
2015 Fatigued Driving Crashes

Proportion of Crashes Involving Fatigued Driving (% of Total Crashes)



2015 Aggressive Driving Crashes

Number of Aggressive Drivers by Age and Gender

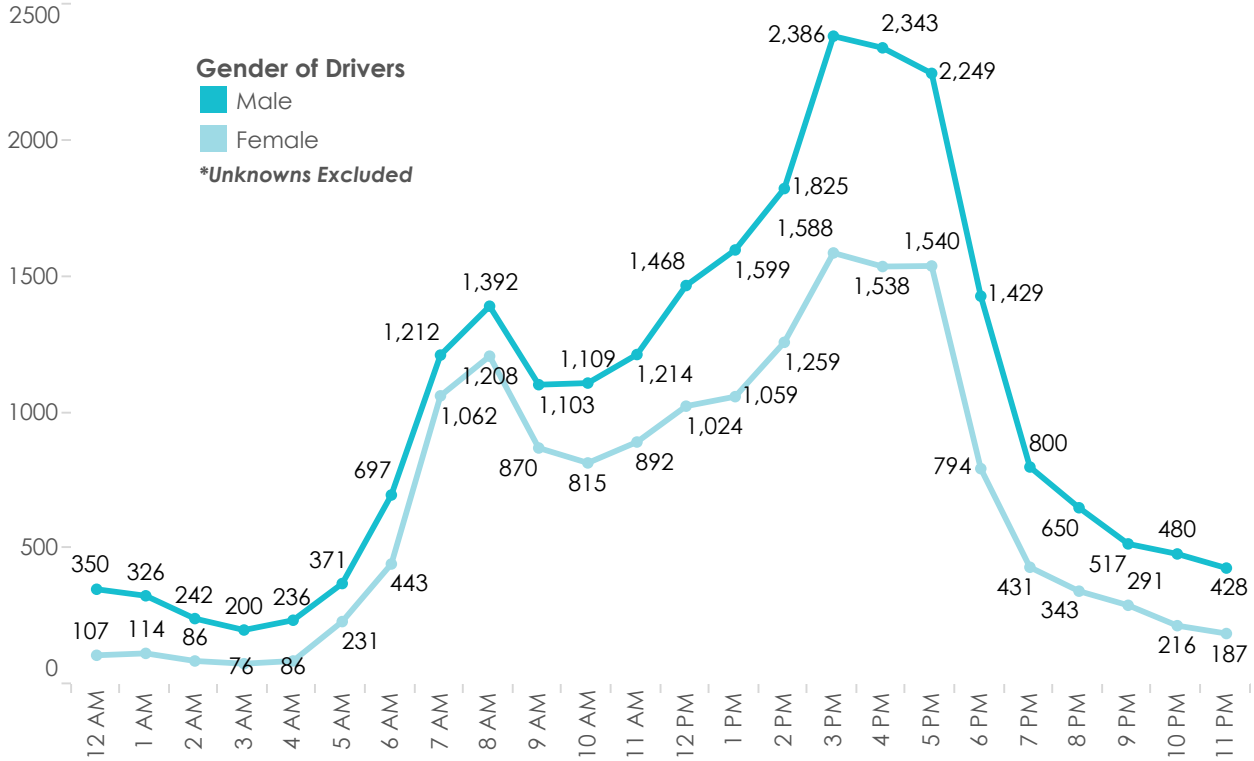


Agressive driving data includes drivers who were classified as doing one of the following that could have contributed to the crash:

Exceeded the Speed Limit
Drove Too Fast for Conditions
Followed Too Closely

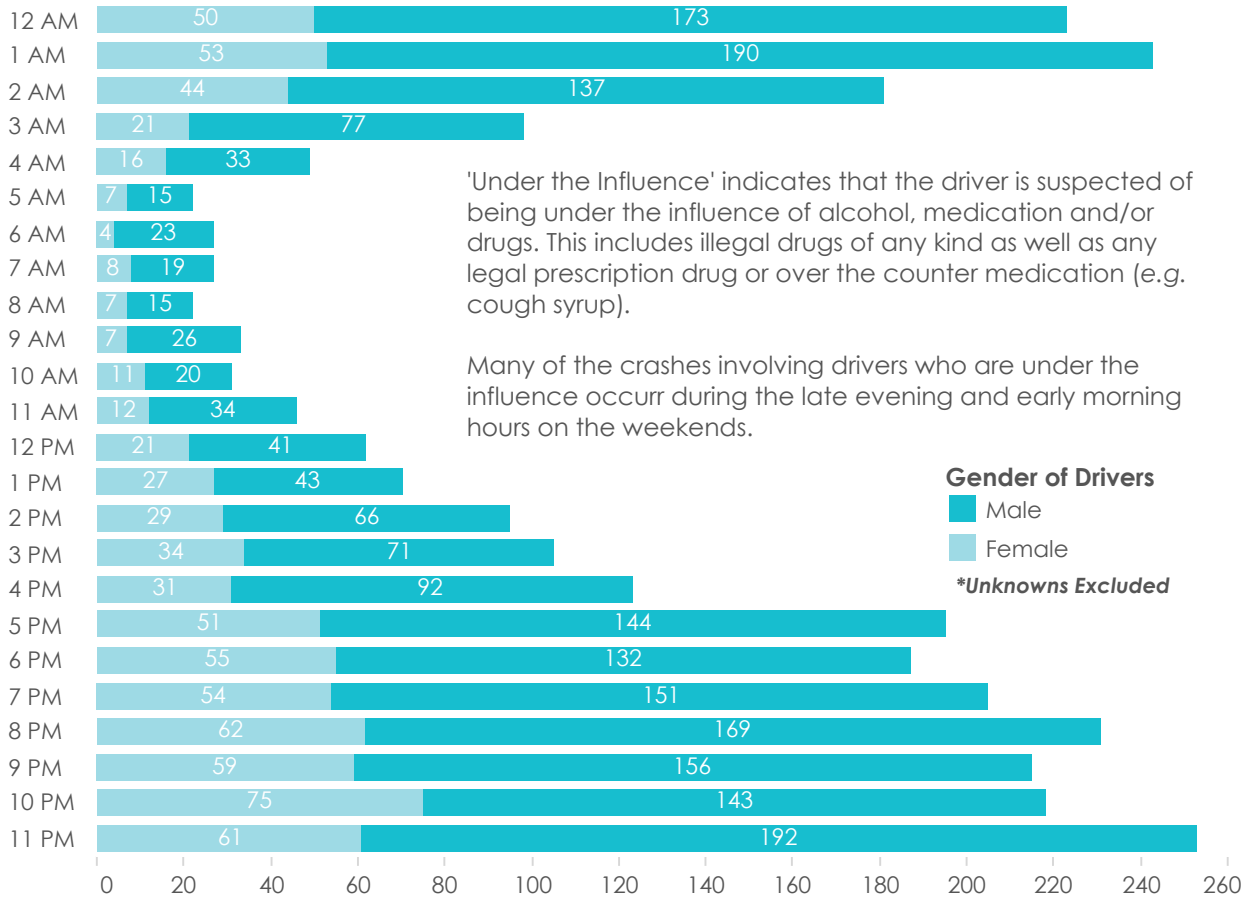
- Senior Drivers (55 or Older)
- Adult Drivers (26-54)
- Young Drivers (15-25)
- Not Driving Age (14 or Younger)
- Unknown

Gender* of Aggressive Drivers by Time of Crash



2015 Under the Influence Crashes

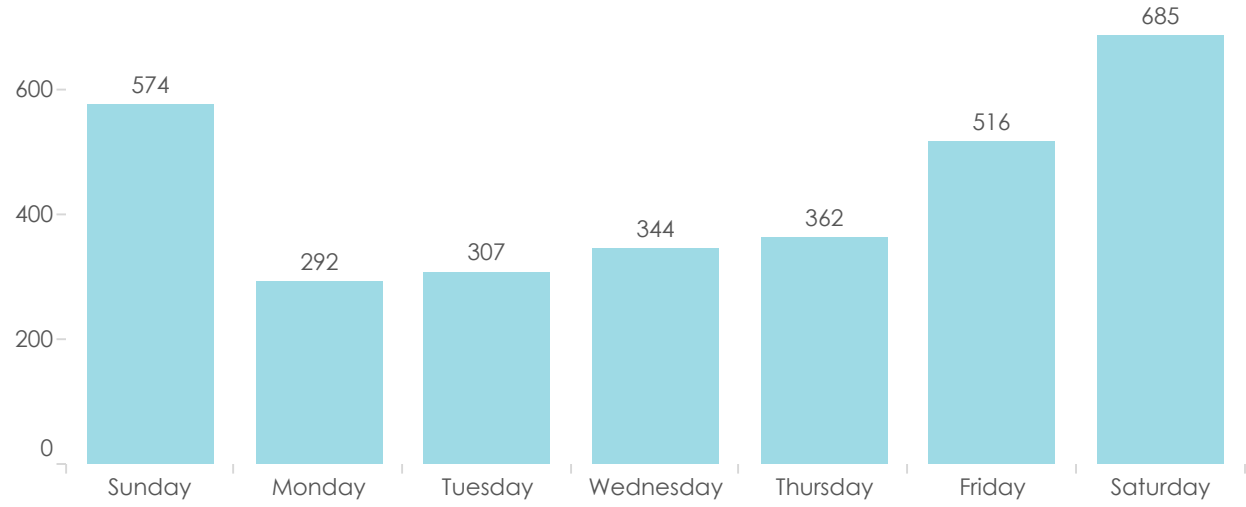
Number of Under the Influence Drivers by Gender* and Time of Day



'Under the Influence' indicates that the driver is suspected of being under the influence of alcohol, medication and/or drugs. This includes illegal drugs of any kind as well as any legal prescription drug or over the counter medication (e.g. cough syrup).

Many of the crashes involving drivers who are under the influence occurr during the late evening and early morning hours on the weekends.

Under the Influence Crashes by Day of the Week

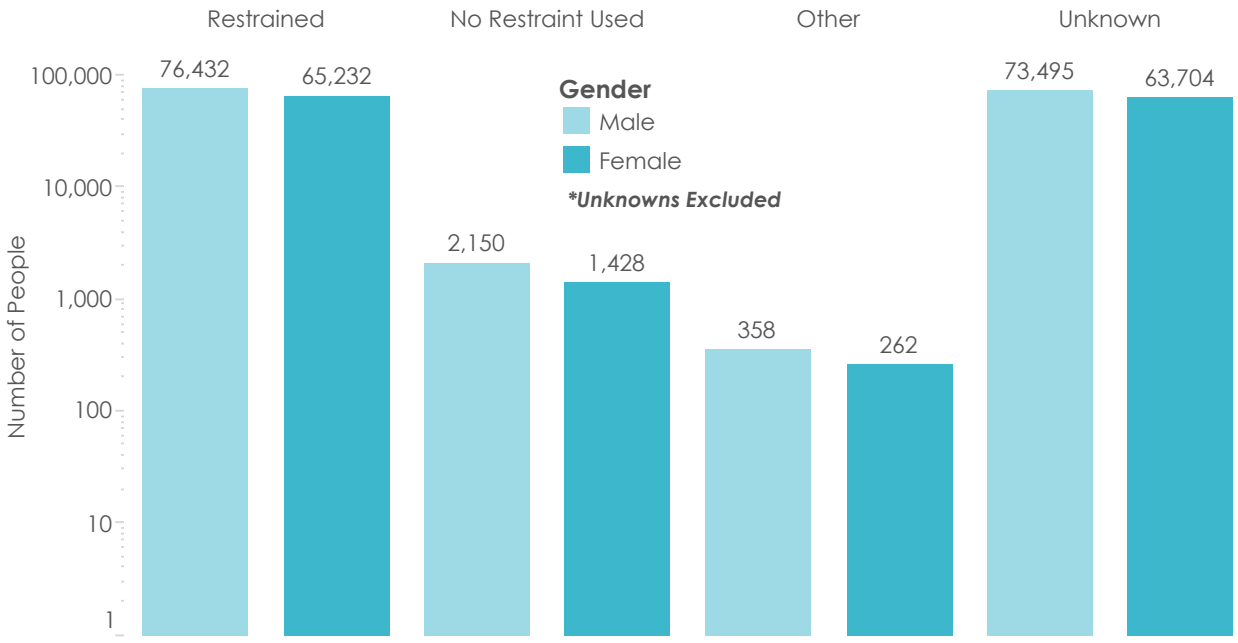


2015 Unrestrained Crashes

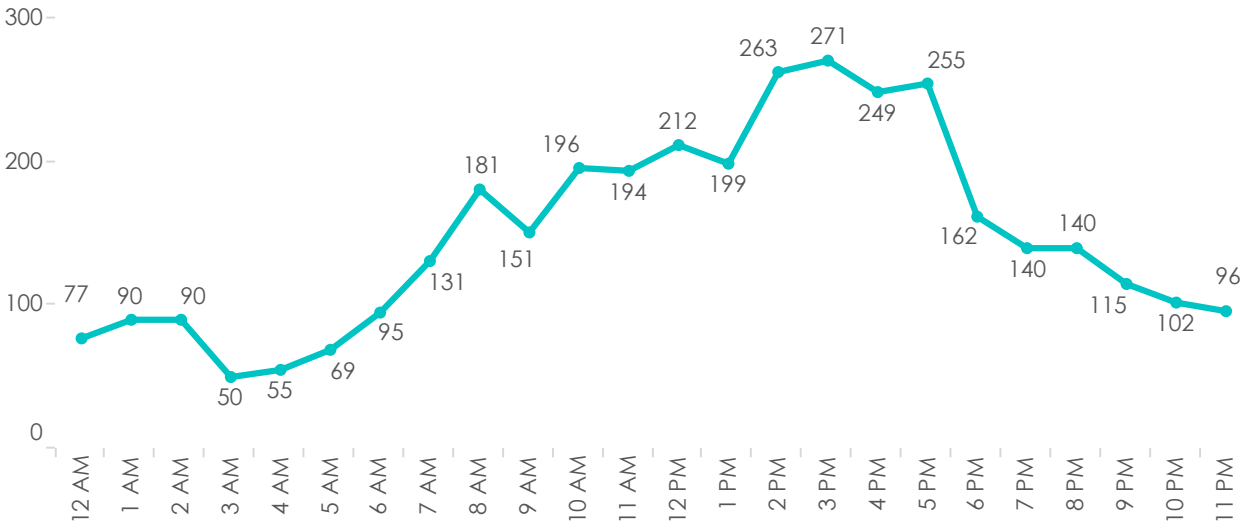
Unrestrained crashes are defined as those crashes in which at least **one** involved person was not wearing a restraint type of any kind during the crash event.

In 2015, crashes involving unrestrianed occupants occurred with the greatest frequency during the hours of 2 PM to 5 PM. This could be because this is generally the time of day with the greatest number of traffic volume.

Restraint Use By Gender* of Occupant



Unrestrained Crashes by Time of Day



2015 Speed Related Crashes

Speeding Related	Number of Total Drivers	% of Total
Racing	106	0.05%
Exceeded Speed Limit	1,727	0.88%
Too Fast for Conditions	9,322	4.74%
No	168,675	85.77%
Unknown	16,836	8.56%
Grand Total	196,666	100.00%

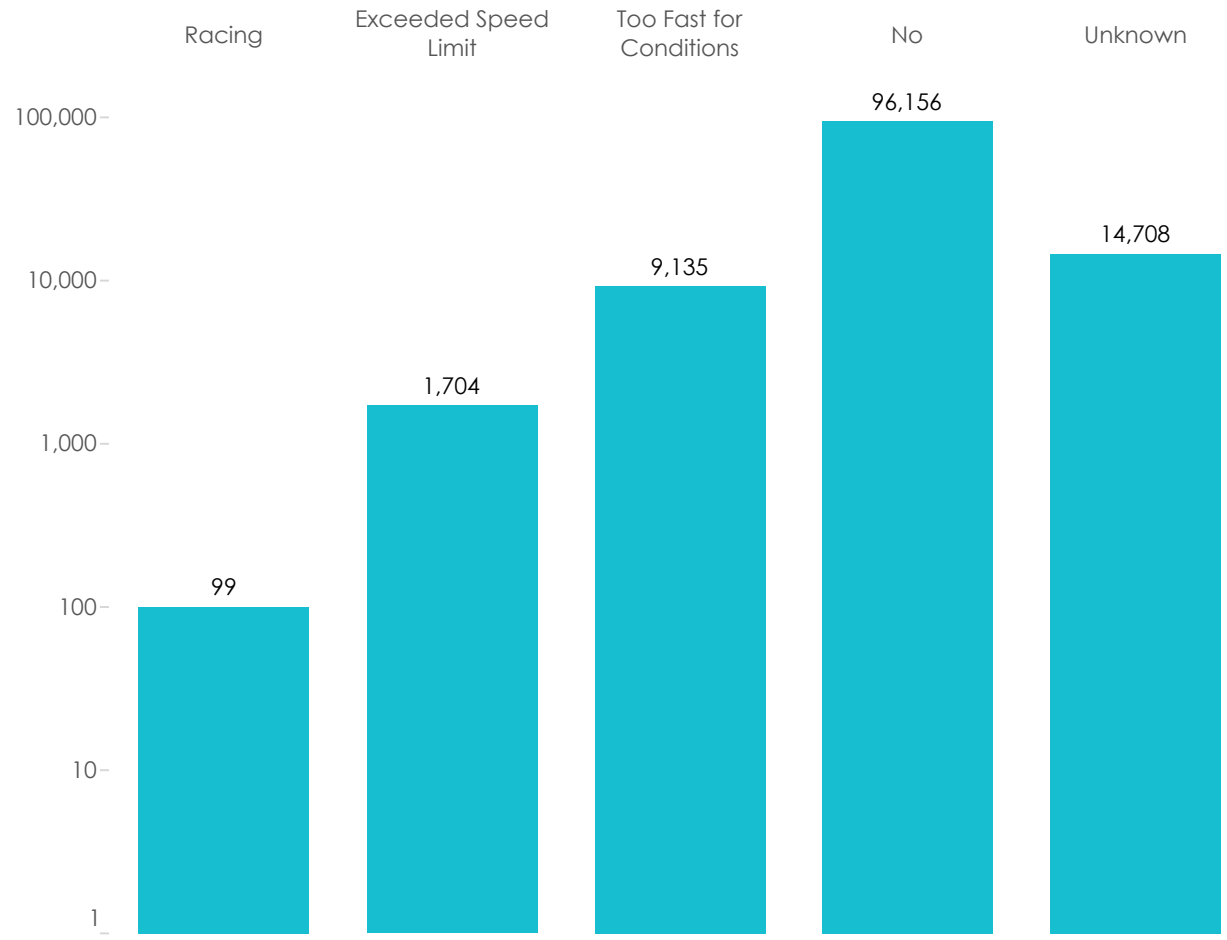
Crashes that involve a speeding motorist are broken down into three classifications by MMUCC:

Racing - When two or more motor vehicles are engaged in a speed-related competition on the roadway.

Exceeded Speed Limit - When a vehicle is traveling above the posted/statutory speed limit designated for certain types of roadways or vehicles.

Too Fast for Conditions - When a vehicle is traveling at a speed that is unsafe for the road, weather, traffic or other enviormental conditions.

Number of Speeding Crashes

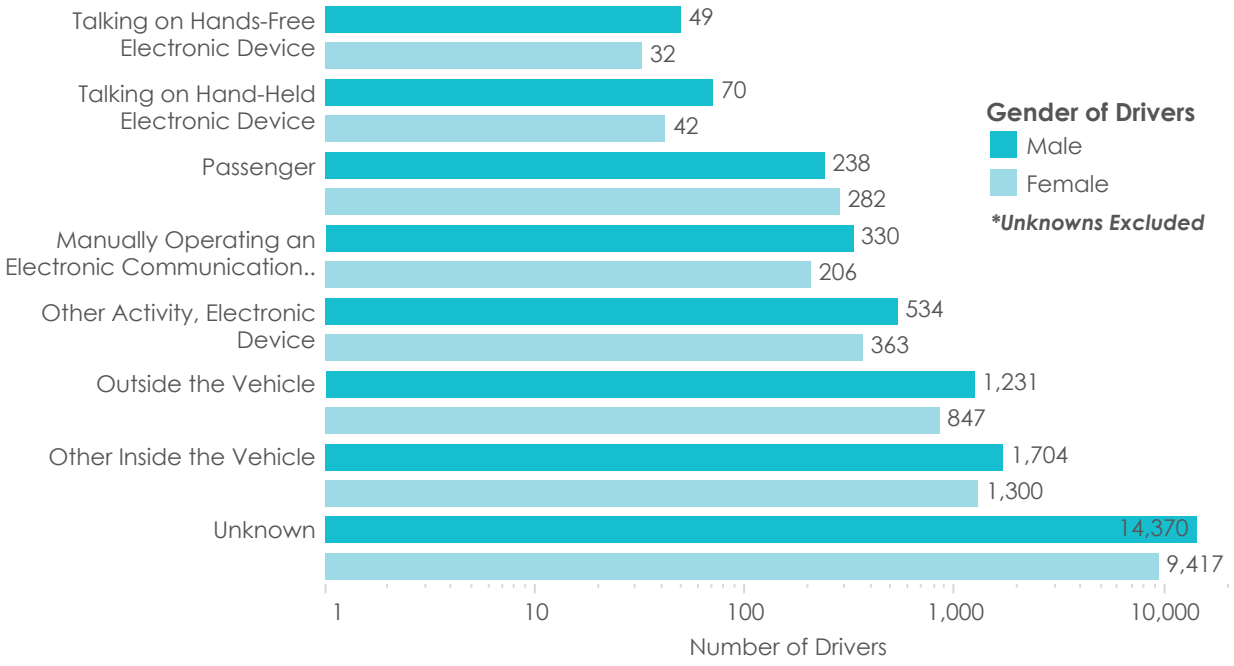


2015 Distracted Driving Crashes

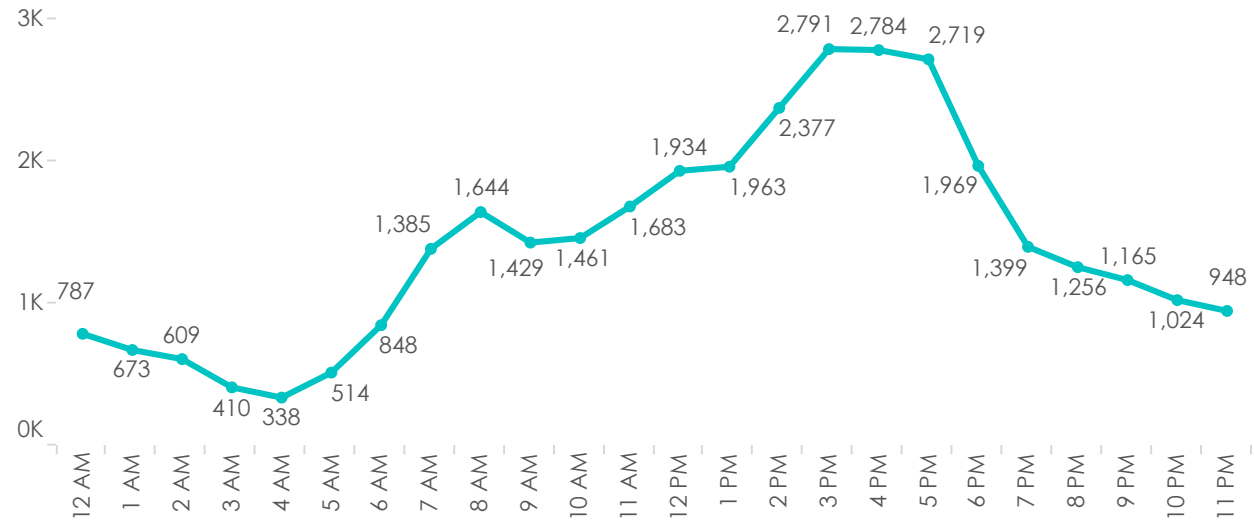
The bar graph below displays the number of drivers who were distracted at the time of the crash by gender. The most common distraction affecting motorists was something inside of their vehicle, which includes behaviors such as eating, drinking, smoking, etc. The line graph reveals the highest occurrence of crashes involving distraction occurred during the hours of 3 PM to 5 PM.

Prior to 2015, data for motor vehicle crashes involving distracted driving was not collected by law enforcement.

Distraction Type by Gender* of Driver



Distracted Driving Crashes by Time of Day



2015 Work Zone Crashes

Location of Crash Relative to Work Zone

	Total Crashes	% of Total
Termination Area	29	0.03%
Before the 1st Work Zone Sign	84	0.08%

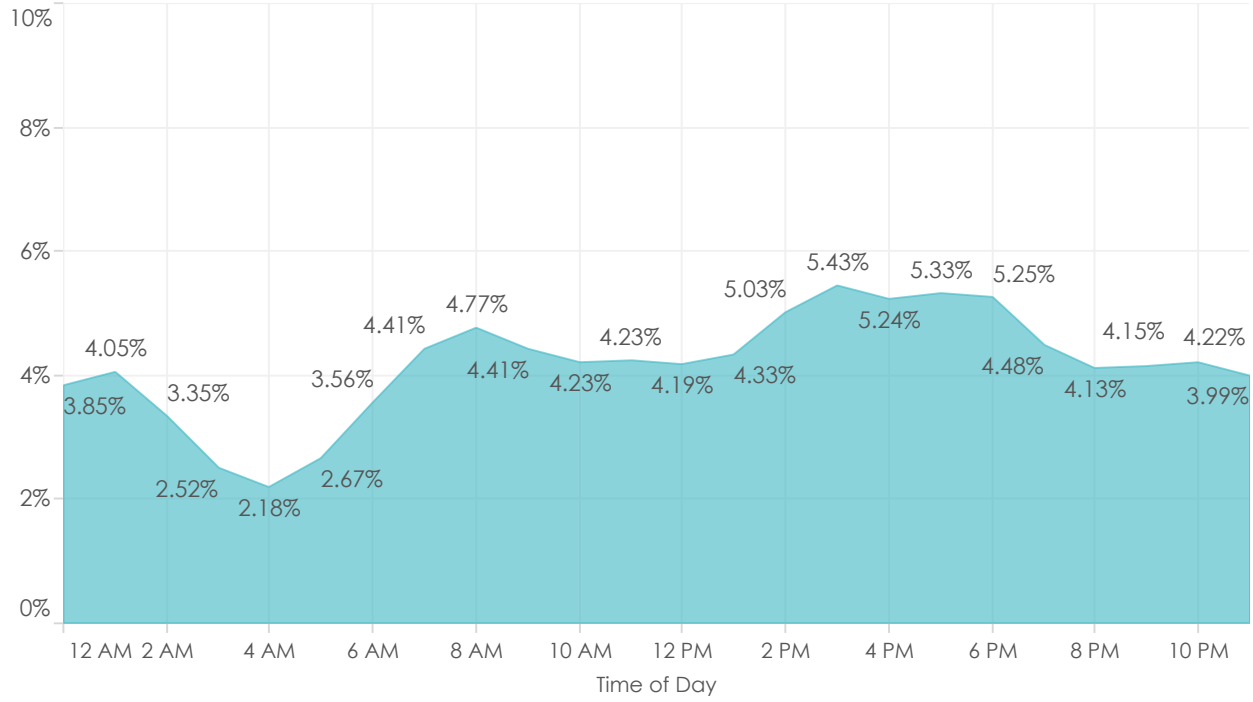
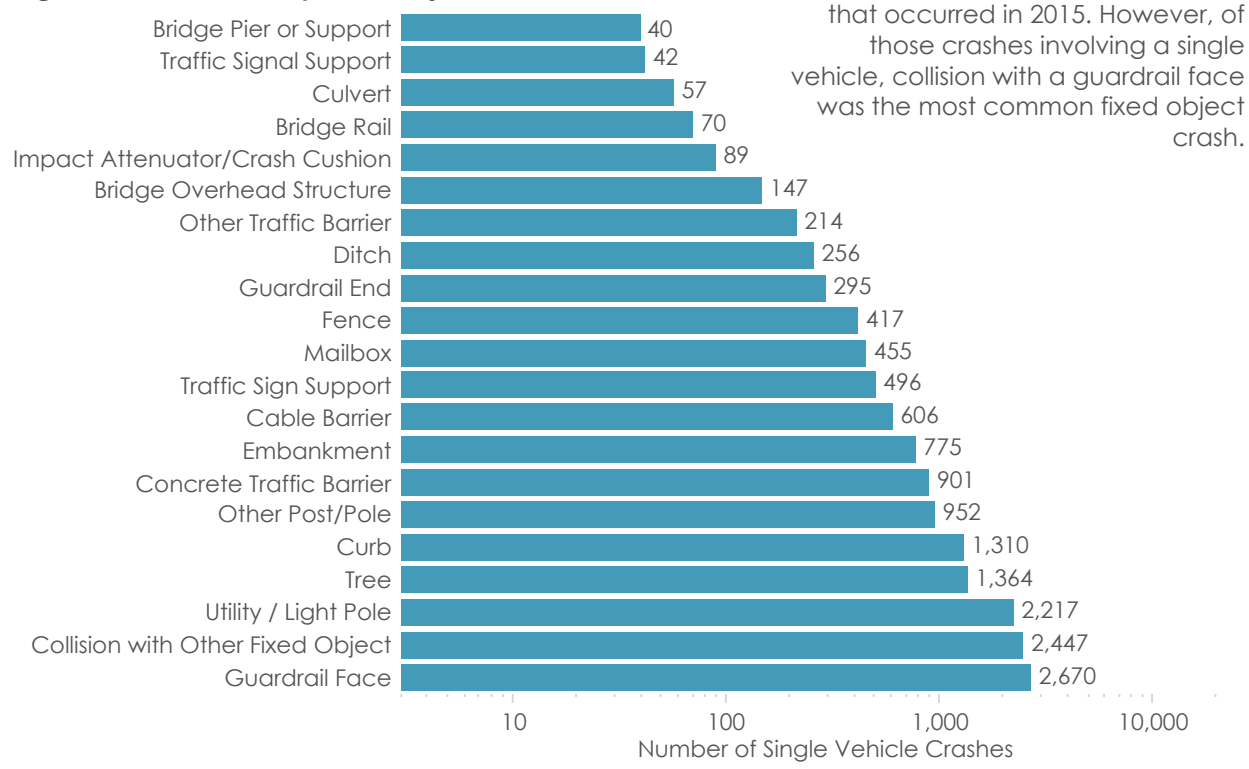
Unknown	4,743	4.27%
Grand Total	111,192	100.00%

2015 Single-Vehicle Crashes

Proportion of Crashes Involving a Single Vehicle (% of Total Crashes)

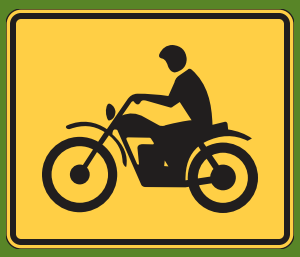


Single Vehicle Crashes by Fixed Object Struck

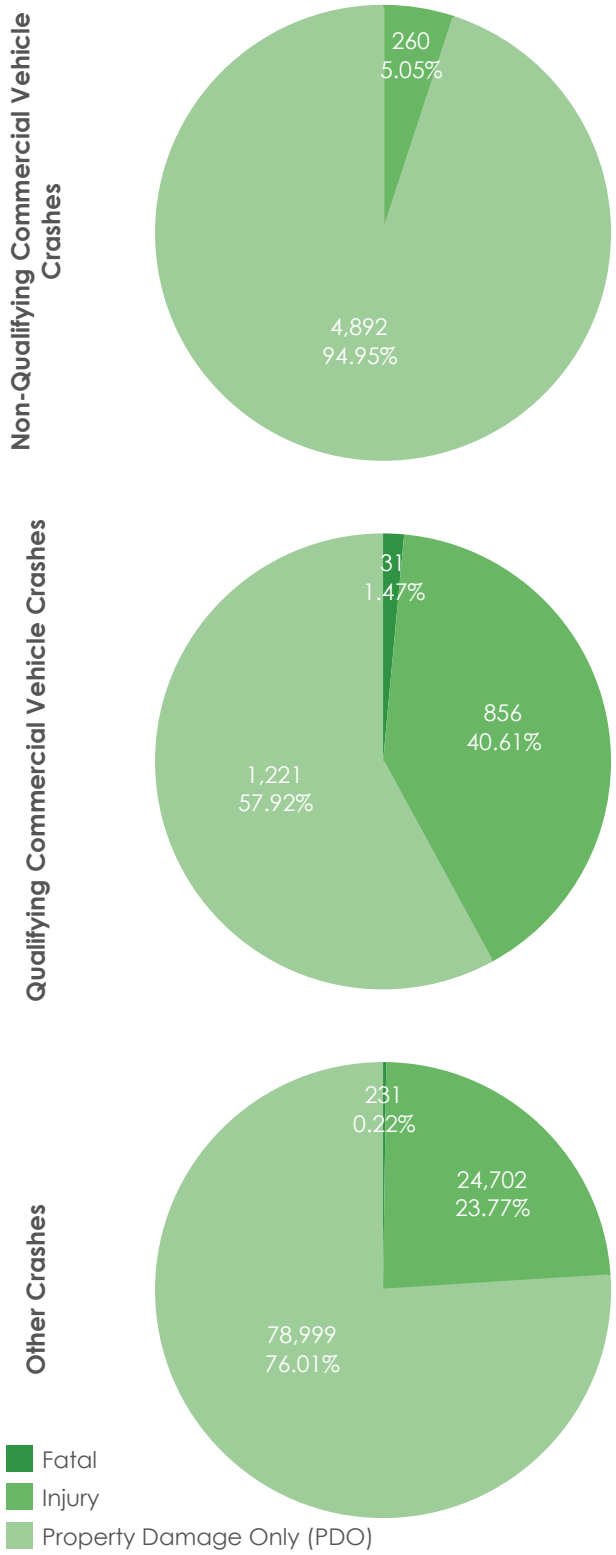


Single-vehicle crashes do not make up a large percentage of crashes that occurred in 2015. However, of those crashes involving a single vehicle, collision with a guardrail face was the most common fixed object crash.

Section IV: Vehicle Emphasis Areas



2015 Commercial Vehicle Crashes vs Other Crashes: Crash Severity



The Federal Motor Carrier Safety Administration (FMCSA) keeps records on commercial vehicle (CV) crashes. The crash and the CV involved need to meet specific criteria in order to be considered.

For a vehicle to qualify as a CV, it must meet one of the following criteria:

1. *The vehicle displayed a hazardous material placard.*

2. *The vehicle has a gross vehicle weight rating or a gross combination weight rating of more than 10,000 lbs and is used on public highways to carry property.*

3. *The vehicle is designed to transport more than eight (8) persons, including the driver.*

For a crash to qualify as an FMCSA qualifying crash, it must involve at least one qualifying commercial vehicle and meet one of the additional criteria below:

1. *The crash resulted in at least one fatal injury.*

2. *The crash resulted in at least injury that resulted in the person being transported to a hospital.*

3. *The crash resulted in at least one vehicle being damaged to the point where it had to be towed from the scene.*

CV crashes, including both qualifying and non-qualifying crashes, make up a small portion of all crashes (6.5%). Qualifying crashes have a higher proportion of fatal and injury crashes, but because qualifying crashes must involve an injury, fatality or a towed vehicle, it is expected that those proportions would be higher.

However, the proportion of both qualifying and other CV crashes involving a fatal injury is twice as high as the proportion for all other crashes, 0.43% and 0.22% respectively.

2015 Commercial Vehicle (CV) Crashes

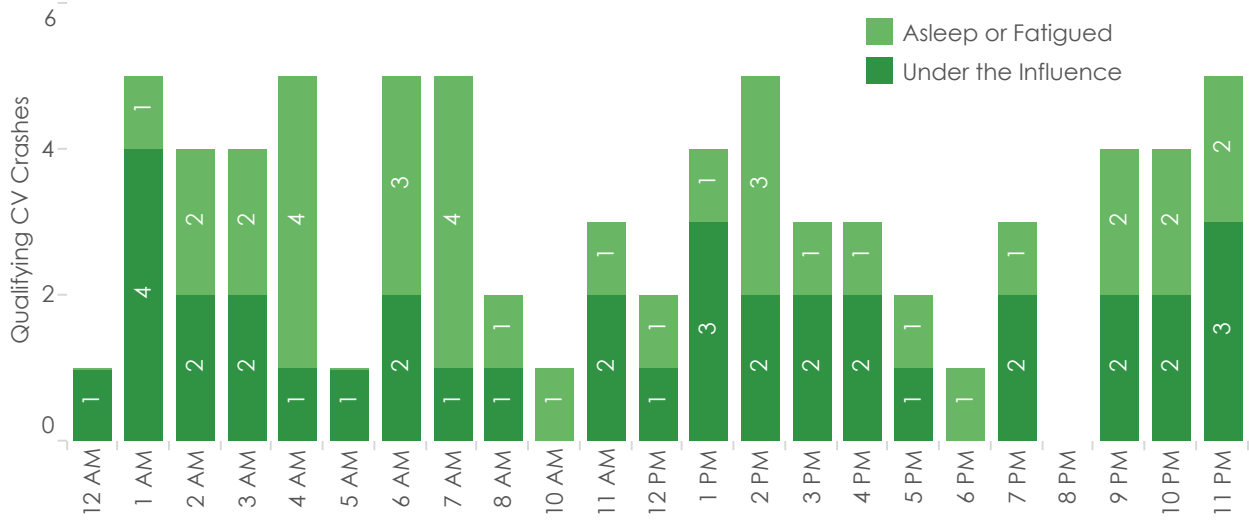
Qualifying CV Crashes by First Harmful Event (Top 20)

	Number of CV Crashes	% of CV Crashes
Other Post/Pole	6	0.29%
Traffic Sign Support	7	0.34%
Embankment	10	0.48%
Cargo/Equipment Loss or Shift	10	0.48%
Cable Barrier	11	0.53%
Collision with a Pedestrian	12	0.58%
Concrete Traffic Barrier	14	0.68%
Struck by Falling, Shifting Cargo	14	0.68%
Curb	16	0.78%
Tree	17	0.82%
Collision with Other Fixed Object	20	0.97%
Other Non-Collision	22	1.07%
Overturn or Rollover	23	1.12%
Utility/Light Pole	25	1.21%
Bridge Overhead Structure	43	2.09%
Collision with Other Non-Fixed Object	46	2.23%
Parked Motor Vehicle	54	2.62%
Guardrail Face	62	3.01%
Collision with a Motor Vehicle in Operation	1,638	79.44%
Unknown	12	0.58%
Grand Total	2,062	100.00%

The top twenty most frequent 'First Harmful Event' for crashes involving commercial vehicles is displayed above.

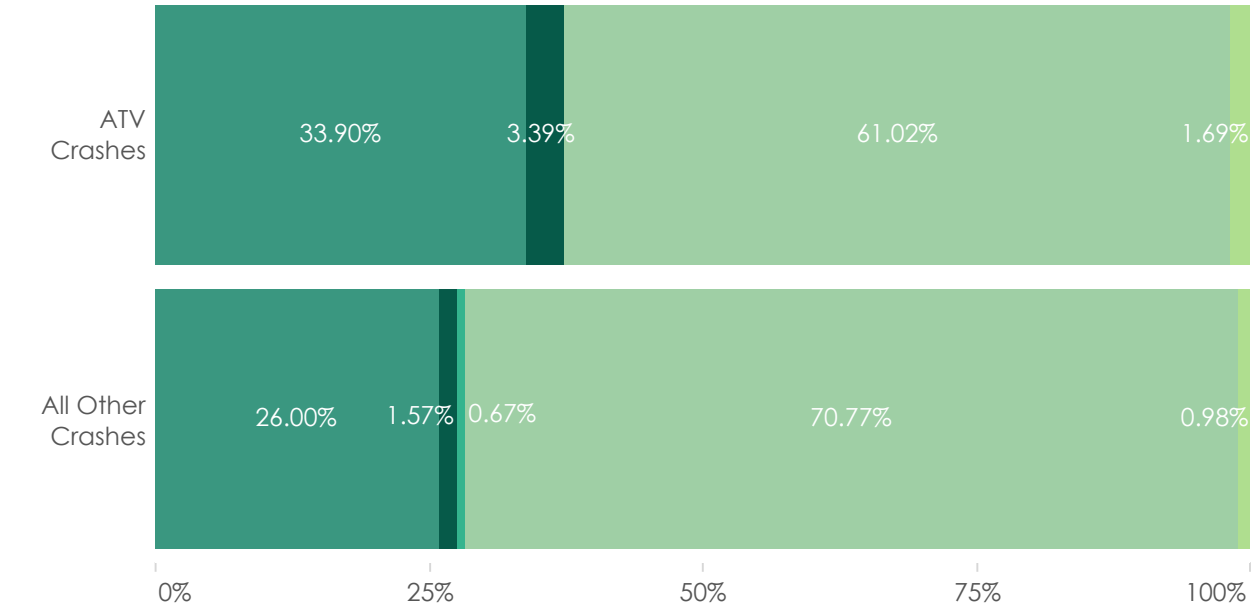
The bar chart below portrays commercial vehicle crashes with drivers who were found to be fatigued or under the influence by the time of day of their crash. Four crashes occurred at 1 AM involving a driver who was under the influence of alcohol/medication or drugs. The majority of crashes involving asleep or fatigued drivers occurred in the early morning hours between 2 AM and 7 AM.

Qualifying CV Crashes by Time of Day and Condition of Driver



2015 All Terrain Vehicle (ATV) Crashes

ATV Crashes by Light Conditions



ATV crashes are an infrequent occurance, with only 59 occuring during 2015. As indicated by the chart above, all crashes occured more often during daylight hours, but ATV crash occured during dusk, dawn, or darkness with a greater frequency than all other crashes. Also, as inidicated in the chart below, ATV crashes are more than twice as likely to result in injuries and fatalities, with 54.23 percent of ATV crashes resulting in an injury or a fatal injury as compared to 23.45percent of all crashes.

Crash Severity of ATV Crashes

	ATV Crashes		All Other Crashes	
	Number of Crashes	% of Total Crashes	Number of Crashes	% of Total Crashes
Fatal	3	5.08%	257	0.23%
Injury	29	49.15%	25,753	23.22%
Property Damage Only (PDO)	27	45.76%	84,881	76.54%

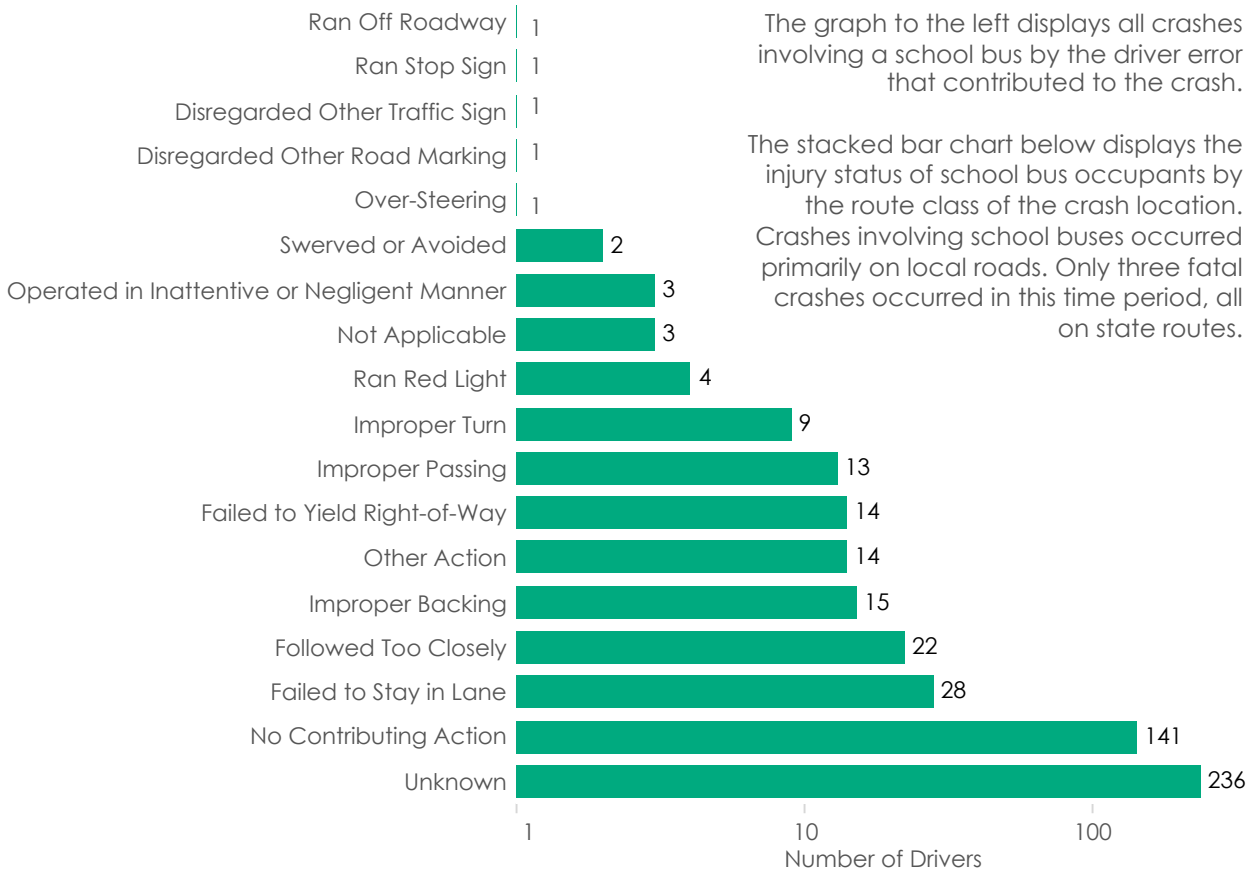
2015 School Bus Crashes

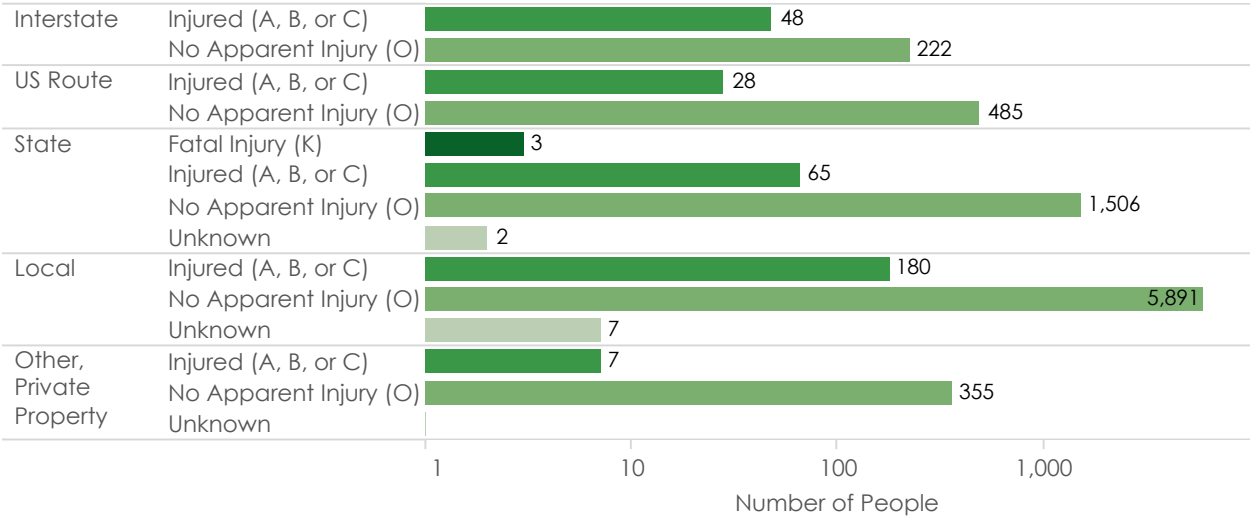
School Bus Crashes by Driver Actions



The graph to the left displays all crashes involving a school bus by the driver error that contributed to the crash.

The stacked bar chart below displays the injury status of school bus occupants by the route class of the crash location. Crashes involving school buses occurred primarily on local roads. Only three fatal crashes occurred in this time period, all on state routes.

School Bus Crashes by Injury Status and Route Class



Injury Status

Fatal Injury (K) | Injured (A, B, or C) | No Apparent Injury (O) | Unknown

2015 Motorcycle Involved Crashes

Motorcycle Involved Crashes by Manner of Crash

	Number of Crashes	% of Total
Rear to Rear	4	0.25%
Rear to Side	19	1.19%
Head On	24	1.51%
Sideswipe, Different Direction	48	3.02%
Other	97	6.10%
Sideswipe, Same Direction	137	8.62%
Rear End	294	18.49%
Angle	423	26.60%
Single Vehicle Crash	534	33.58%
Unknown	10	0.63%
Grand Total	1,590	100.00%

Many of the motorcycle invovled crashes involved no other vehicles. However, just over a quarter of these crashes were angle and another 18 percent were rear end.

The highest crash frequency falls on Saturdays and Sundays in the early afternoon hours of noon to 4 PM.

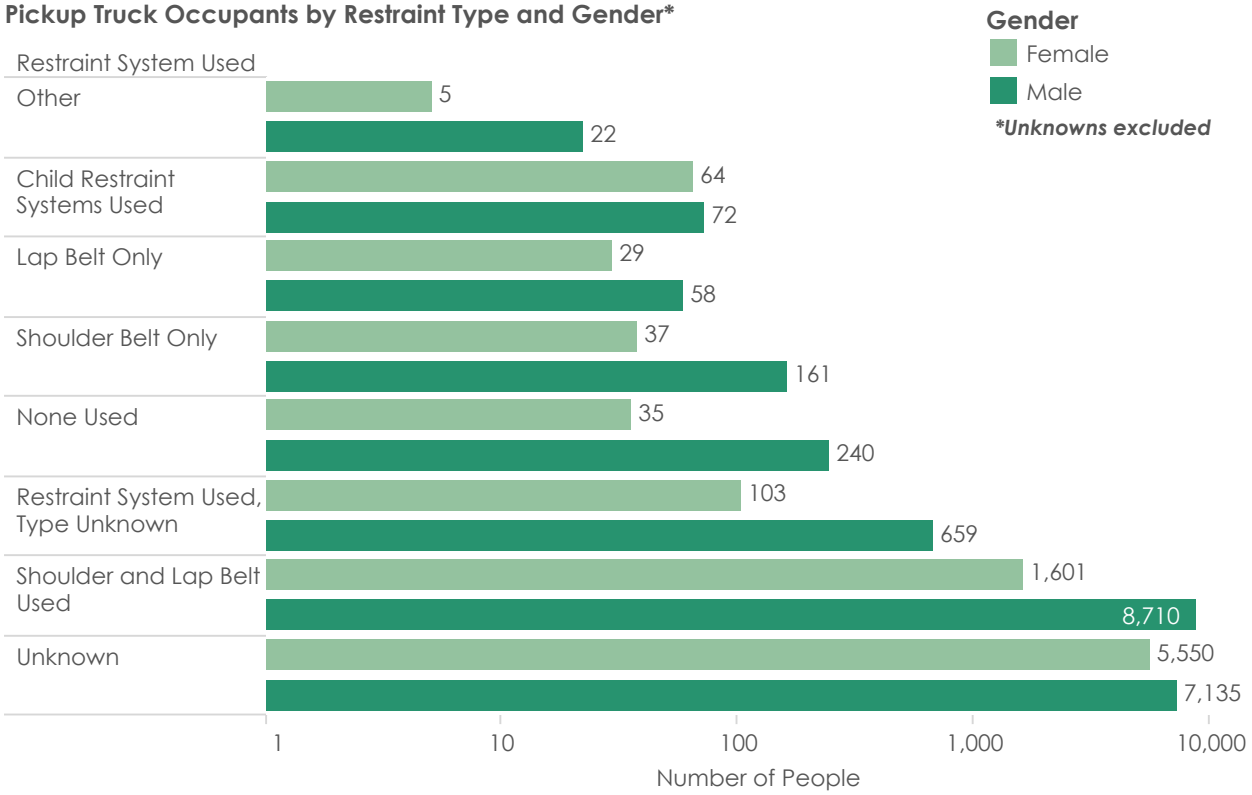
1 — 15 <

Twenty motorcycle-involved crashes occurred on July 19th, 2015, the most of any day for the entire year. In generally, motorcycle-involved crashes occurr most frequently between the months of June and September. This is a common motorcycle riding period, especially in areas where the winter months usually bring inclement weather, such as Connecticut.

blank white spaces indicate no crashes occurred during that time period

2015 Pickup Truck Crashes

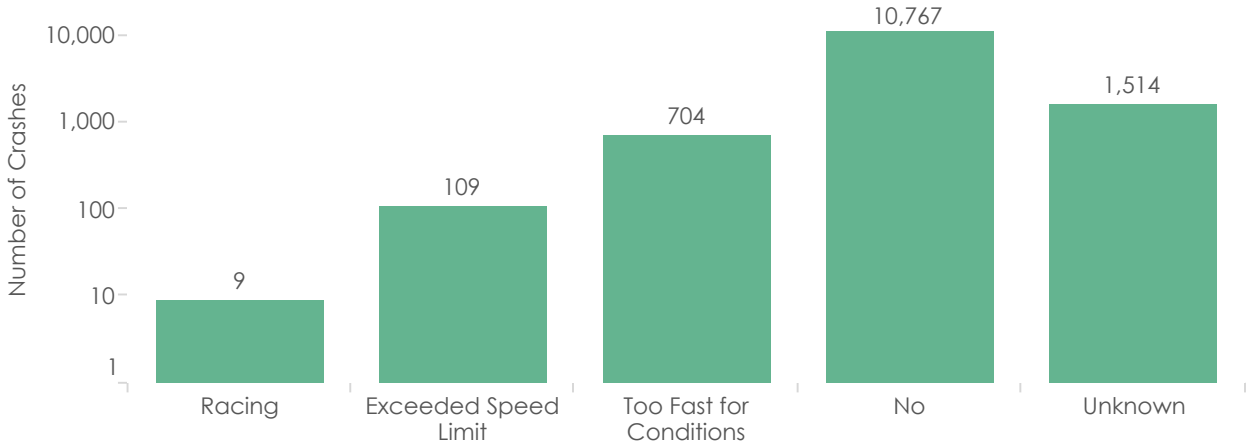
Pickup Truck Occupants by Restraint Type and Gender*



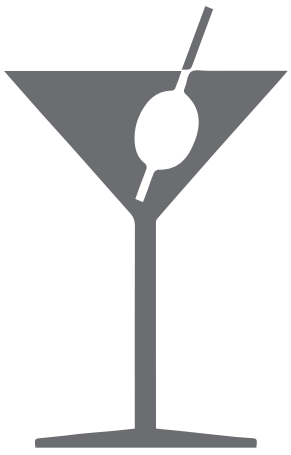
The majority of pickup truck occupants were utilizing both a shoulder and lap belt at the time of their crash. Interestingly, the number of Male occupants is nearly six times that of Females for each category, implying that the descrepancy between gender is even greater when looking specifically at pickup trucks.

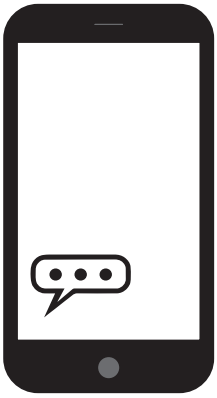
Speeding was a factor in only six percent of crashes involving pickup trucks.

Speeding Involvement in Pickup Truck Crashes



Section IV: Driver Emphasis Areas





2015 Driver Actions: Fatalities and Injuries

Displayed below are the number of drivers who were killed or injured in 2015 crashes categorized by the driver action that contributed to the crash.

'Failed to Stay in Lane' was cited as the contributing driver action most often for each injury classification.

Driver* Injuries and Fatalities by Driver Actions

	Fatal Injury (K)	Suspected Serious Injury (A)	Suspected Minor Injury (B)	Possible Injury (C)

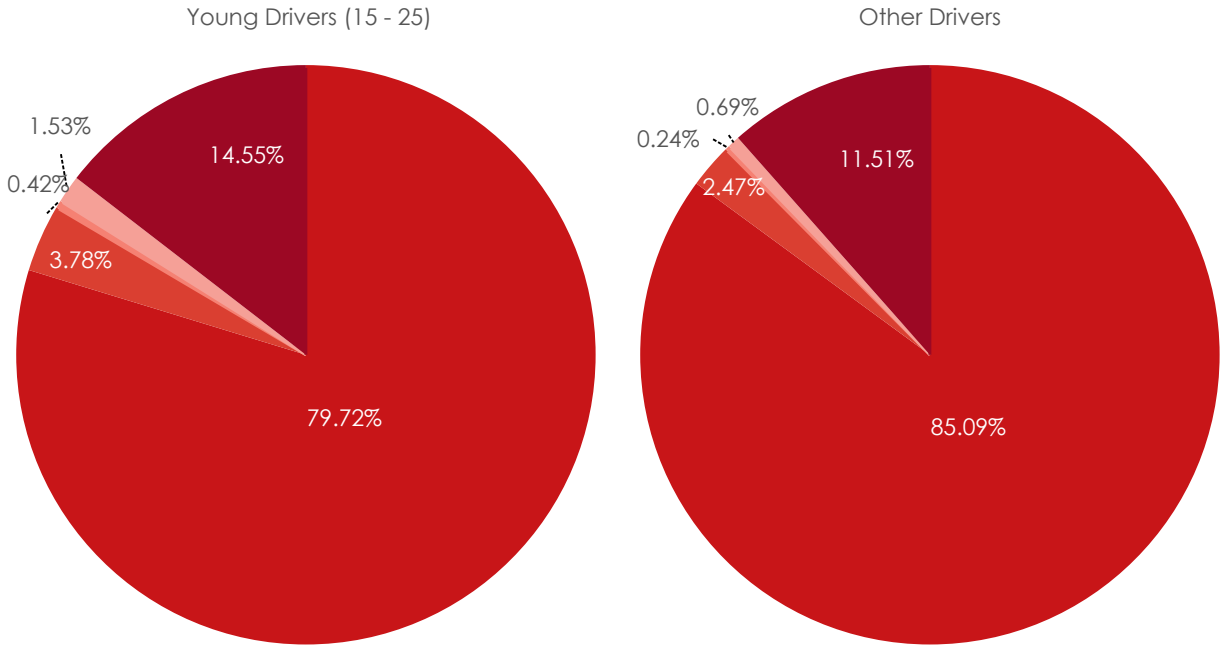
Other Action	23	5	6	43	18	150	129	950
Unknown	7	2	2	9	8	11	19	7,604

Driver distractions generally include any internal or external activity, not directly related to the driving task, which may influence a driver's performance. This includes eating, drinking, manipulating the radio or navigation system, etc.

2015 Young Drivers (Aged 15 - 25)

Distraction: Young Drivers vs. Other Drivers



Distraction by young drivers is documented almost twice as often in 2015 crashes than it is for all other drivers. Distraction by something inside their vehicle, other than an electronic device or passenger, such as eating, drinking, smoking, etc. was the most common type of distraction documented.

Speeding is a factor in nearly twelve percent of crashes involving drivers age 15 to 25.

Injury Status & Gender of Young Drivers in Speed-related Crashes

		Racing	Exceeded Speed Limit	Too Fast for Conditions	Unknown
Fatal Injury (K)	Female		1	1	4
	Male		9	4	8

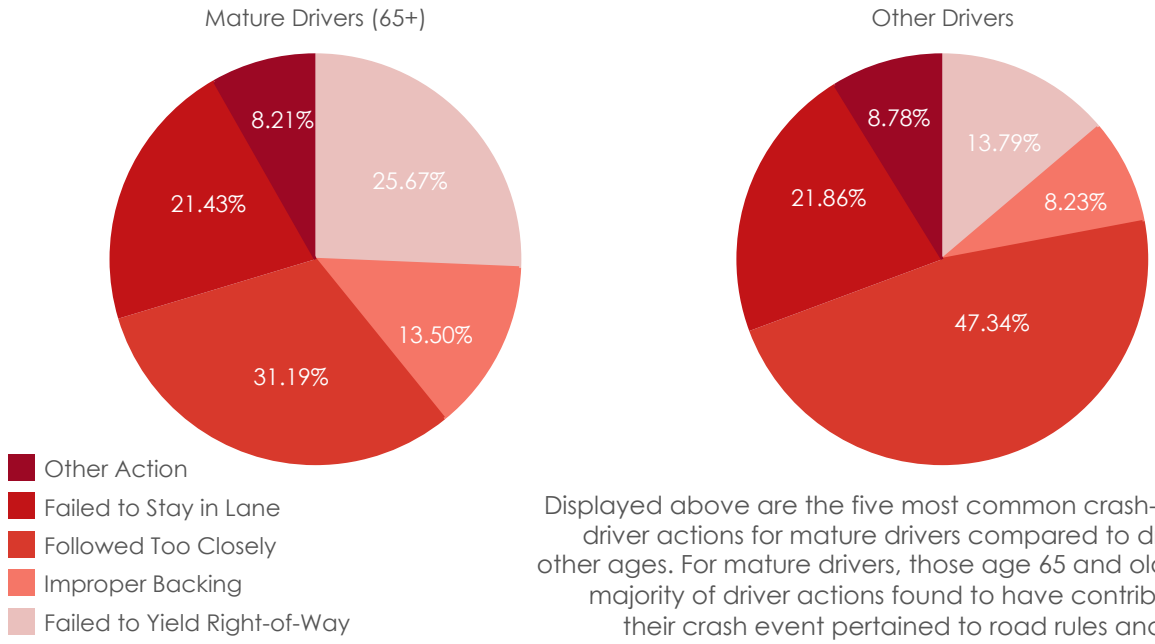
	Male	23	349	1,813	1,336
	Unknown		5	19	11

2015 Mature Drivers: Driver Actions and Time of Day

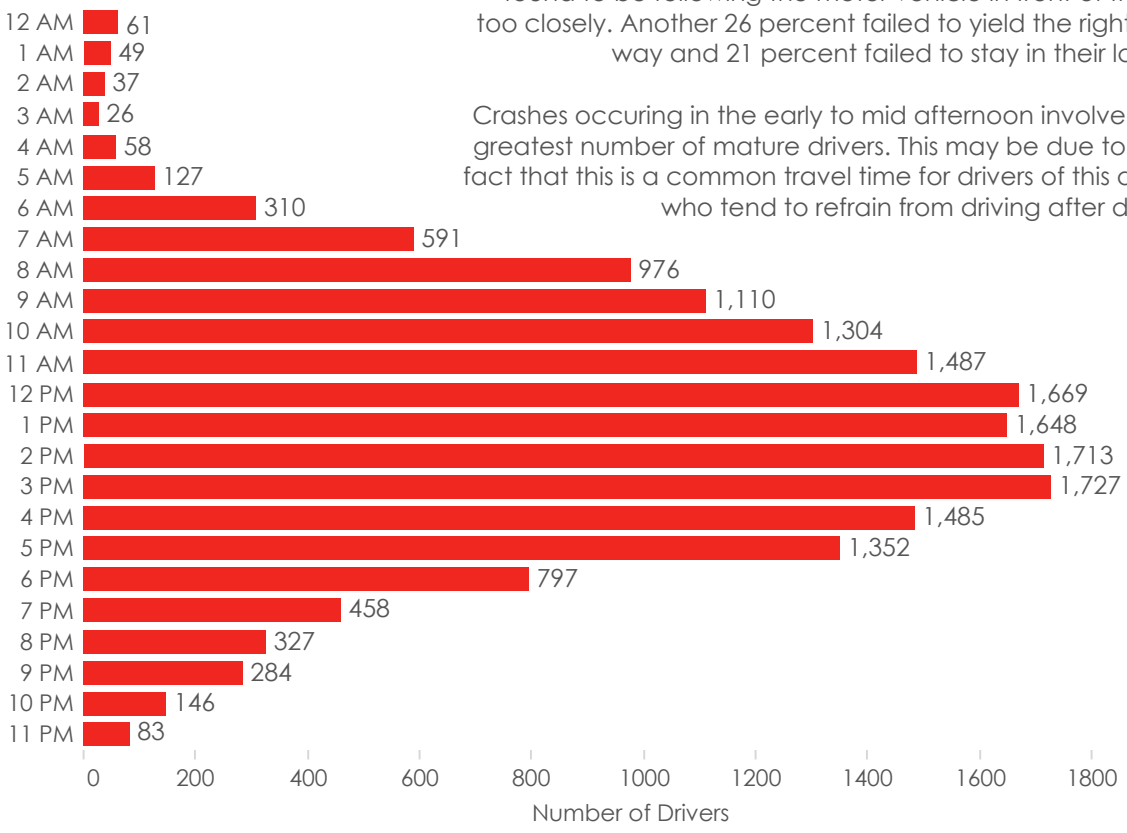
Driver Actions: Mature Drivers vs. Other Drivers



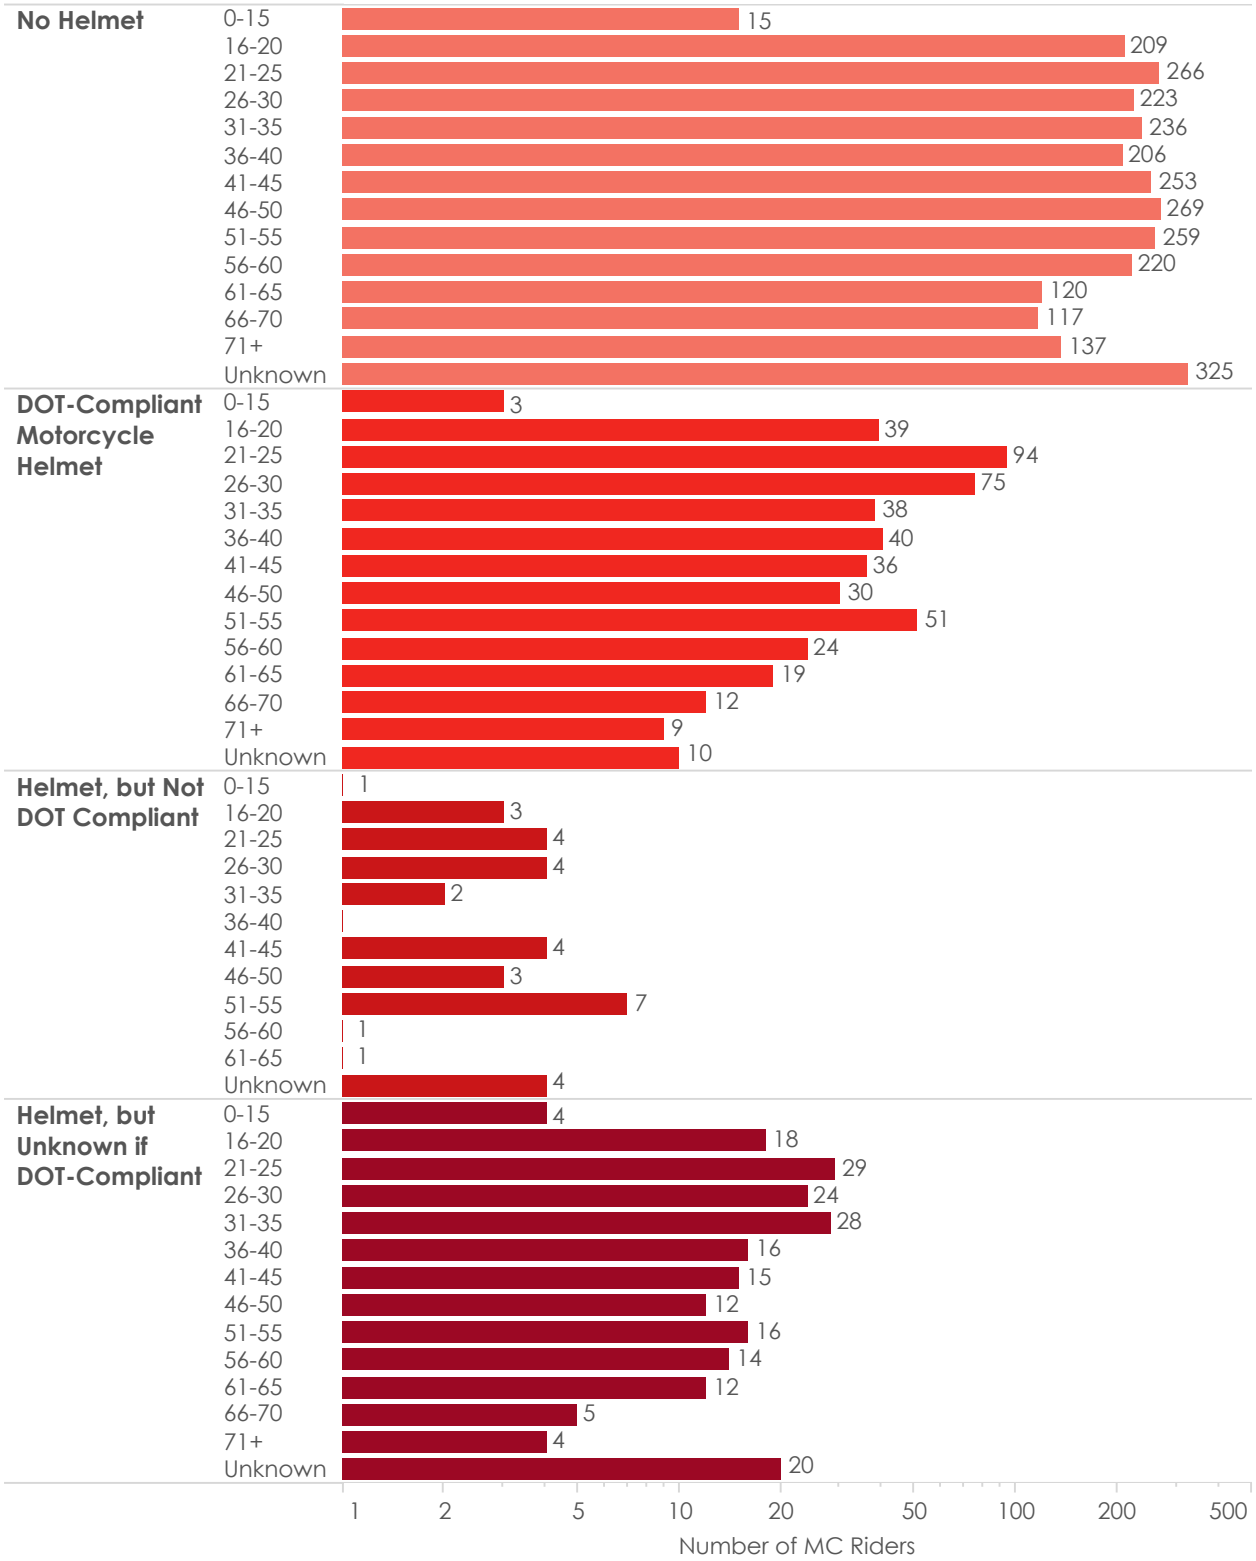
Displayed above are the five most common crash-related driver actions for mature drivers compared to drivers of other ages. For mature drivers, those age 65 and older, the majority of driver actions found to have contributed to their crash event pertained to road rules and depth perception. Just over 30 percent of mature drivers were found to be following the motor vehicle in front of them too closely. Another 26 percent failed to yield the right-of-way and 21 percent failed to stay in their lane.

Crashes occuring in the early to mid afternoon involve the greatest number of mature drivers. This may be due to the fact that this is a common travel time for drivers of this age, who tend to refrain from driving after dark.

Number of Mature Drivers by Time of Crash



2015 Motorcycle Riders: Helmet Use by Age



2015 Motorcycle Riders: Helmet Use and Injury Status

Over 50 percent of motorcycle riders who were killed were not wearing a helmet of any kind at the time of their crash. The same is true for those who suffered a suspected serious or minor injury.

		No Helmet	Helmet, DOT - Compliant	Helmet, but not DOT-Compliant	Helmet, but Unknown if DOT-Compliant	Not Applicable or Unknown	Grand Total

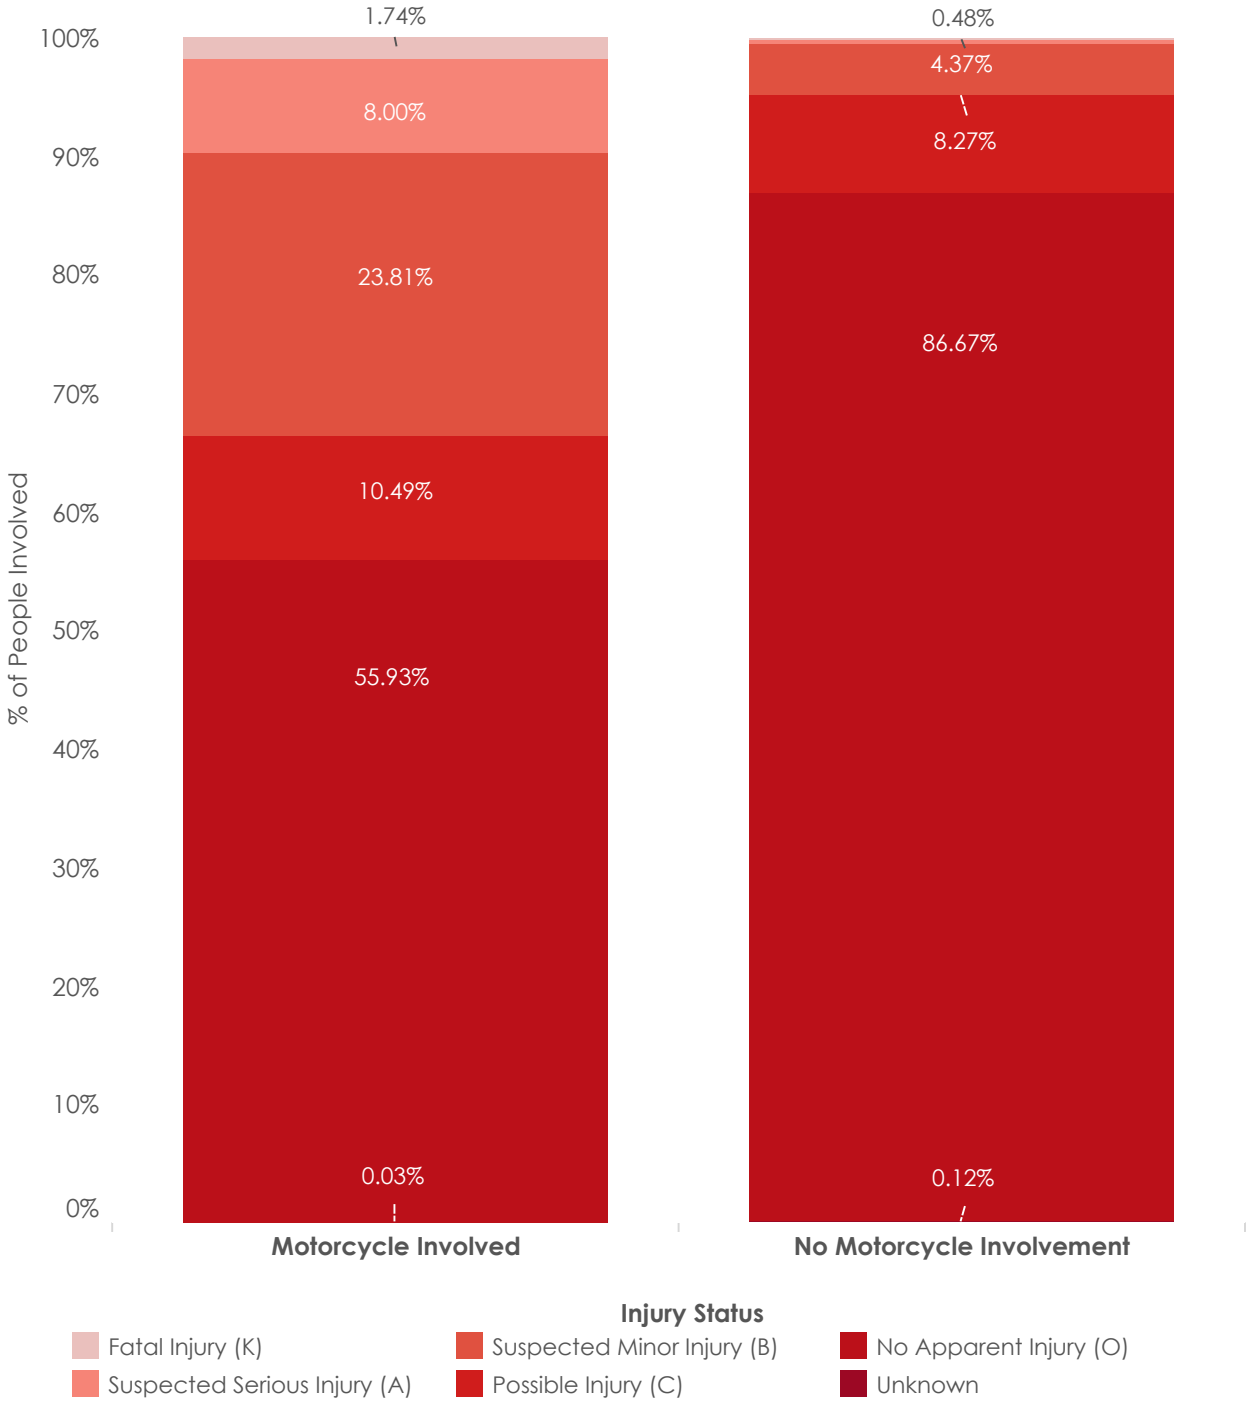
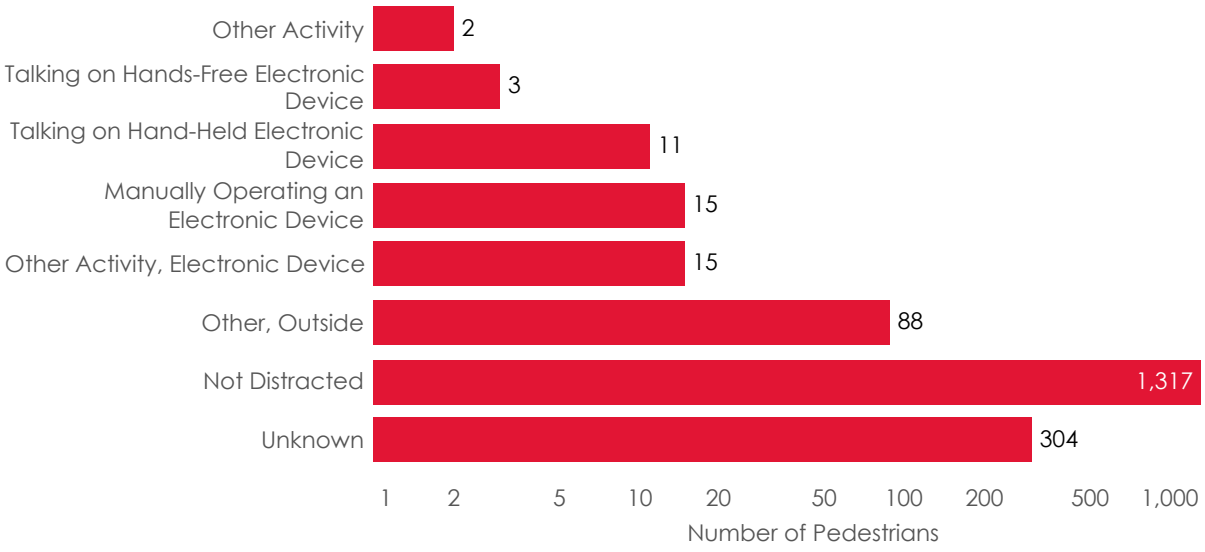
2015 Injury Status: Motorcycle Riders vs All Other Persons Involved



Based on the bar chart above, motorcycle riders experienced a higher percentage of injury than all other people involved in crashes in 2015. Less than 13 percent of crash victims not on a motorcycle were injured or killed, compared to 44 percent of motorcycle riders.

2015 Pedestrian-Involved Crashes

Pedestrian Distraction



Pedestrian refers to a non-occupant of a vehicle in transport. This is includes persons in wheelchairs, persons in buildings, skaters, or persons using personal conveyance equipment, etc.

Of the pedestrians who were killed in 2015 crashes, the highest percentage was those aged 51 to 70 years (33%). Twenty-one to thirty-four year olds account for the greatest percent of pedestrians injured, at nearly 27 percent.

Pedestrians Killed

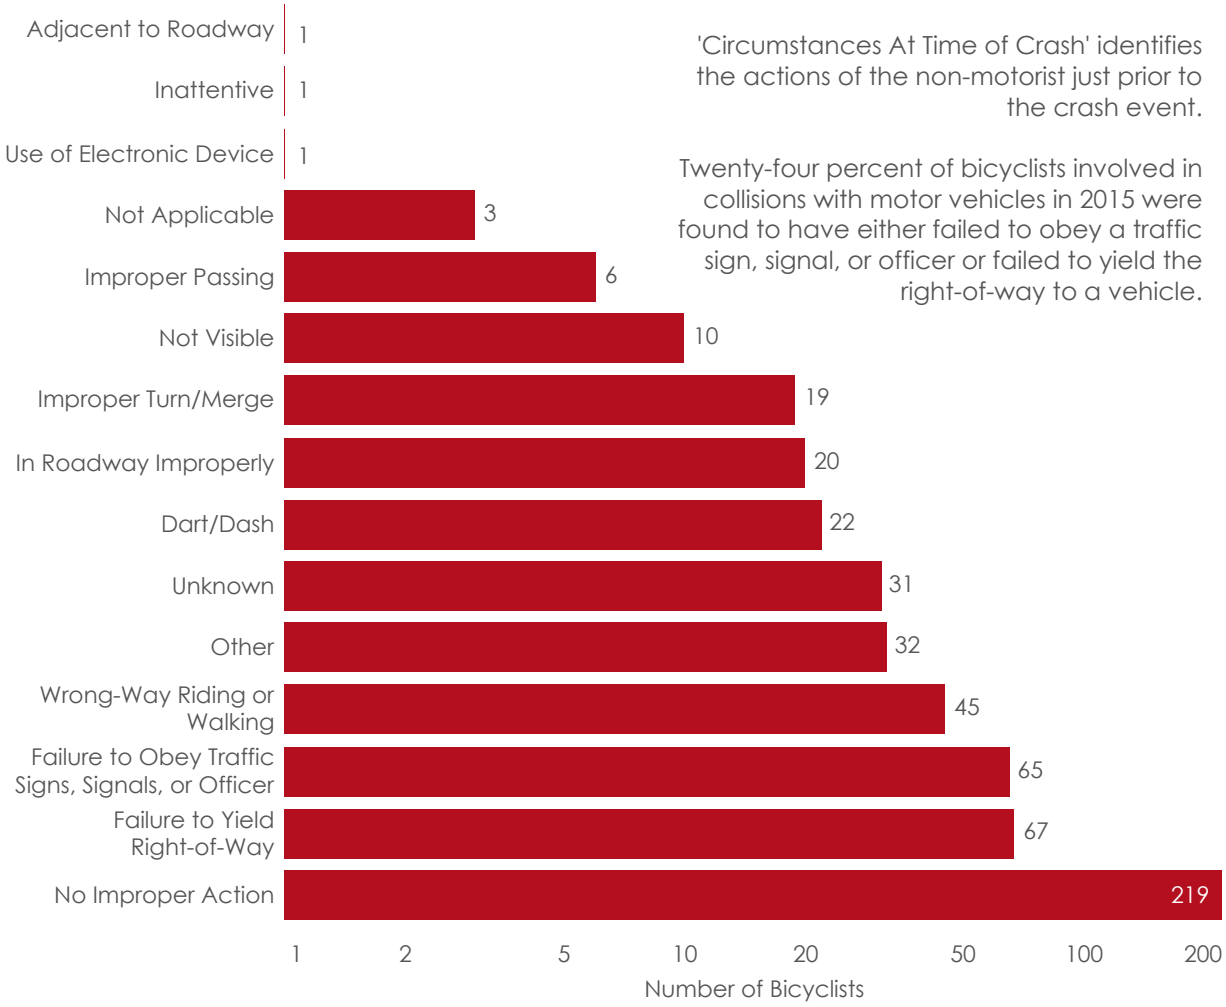
2015 Bicyclist-Involved Crashes

Bicyclist Circumstances At Time of Crash



'Circumstances At Time of Crash' identifies the actions of the non-motorist just prior to the crash event.

Twenty-four percent of bicyclists involved in collisions with motor vehicles in 2015 were found to have either failed to obey a traffic sign, signal, or officer or failed to yield the right-of-way to a vehicle.

Person Type and Injury Status for Bicycle-Involved Crashes

	Fatal Injury (K)	Suspected Serious Injury (A)	Suspected Minor Injury (B)	Possible Injury (C)	No Apparent Injury (O)	Unknown
Other Pedestrian				1		
Occupant of a Non-Motorized Vehicle			1			
Witness					1	
Pedestrian				1	1	
Other Cyclist			2		1	
Passenger			1	1	149	1
Bicyclist	3	53	257	127	99	
Driver			3	6	534	1
Unknown					2	

Section V: Appendices

Appendix A:

Glossary of Terms and Acronyms

Appendix B:

Connecticut PR-1 Crash Report

Appendix A: Glossary of Terms and Acronyms

The following includes definitions of terms and acronyms used in this report. Many of these definitions are identical to or derived from definitions presented in the "MODEL MINIMUM UNIFORM CRASH CRITERIA (MMUCC) GUIDELINES, FOURTH EDITION, 2012". The American National Standards Institute (ANSI) Standard D16.1-2007 Manual on Classification of Motor Vehicle Traffic Accidents, Seventh Edition, and the ANSI Standard D20.1, Data Element Dictionary for Traffic Records Systems, were both used to develop and update MMUCC guidelines.

AIR BAG DEPLOYED Deployment status of an air bag relative to the position in the vehicle for this occupant

ALCOHOL TEST Indication of presence of alcohol test, type and result.

CARGO BODY TYPE The type of body for buses and trucks more than 10,000 lbs GVWR.

COMMERCIAL DRIVER LICENSE This indicates whether the driver license is a commercial driver license (CDL). Also, this information is important to separate the non-commercial licenses included by some States in Class C with the commercial licenses.

CONDITION AT TIME OF CRASH Any relevant condition of the individual (motorist or non-motorist) that is directly related to the crash.

CONTRIBUTING CIRCUMSTANCES, ENVIRONMENT Apparent environmental conditions which may have contributed to the crash.

CONTRIBUTING CIRCUMSTANCES, MOTOR VEHICLE Pre-existing motor vehicle defects or maintenance conditions that may have contributed to the crash.

CONTRIBUTING CIRCUMSTANCES, ROAD Apparent condition of the road which may have contributed to the crash.

DARK – LIGHTED The scene of the crash is illuminated at night, or another period of darkness, by street lamps or other man-made light sources.

DARK – NOT LIGHTED The scene of the crash is not illuminated at night by any light sources, man-made or otherwise.

DAWN The time that marks the beginning of the twilight before sunrise.

DAYLIGHT Whenever the sun is above the horizon at a given location.

DRIVER An occupant who is in actual physical control of a vehicle or, for an out-of-control vehicle, an occupant who was in control until control was lost.

DIRECTION OF TRAVEL BEFORE CRASH The direction of a motor vehicle's travel on the roadway before the crash. Notice that this is not a compass direction, but a direction consistent with the designated direction of the road (the direction of a State-designated North-South highway must be either northbound or southbound even though a motor vehicle may have been traveling due east).

DOT-COMPLIANT MOTORCYCLE HELMET Helmets that are compliant with Federal Motor Vehicle Safety Standards typically weigh approximately three pounds, have an inner liner at least one-inch thick of firm polystyrene foam, have an inside label that states the manufacturer, model, and date of manufacture, and have a DOT sticker on the back of the helmet.

DRIVER ACTIONS AT TIME OF CRASH The actions by the driver that may have contributed to the crash. This data element is based on the judgment of the law enforcement officer investigating the crash.

DRIVER DISTRACTED BY Distractions which may have influenced the driver performance. The distractions can be inside the motor vehicle (internal) or outside the motor vehicle (external).

DRUG TEST Indication of the presence of drug test, type, and result. Excludes drugs administered post-crash.

EJECTION Occupant completely or partially thrown from the interior of the motor vehicle, excluding motorcycles, as a result of a crash.

EMERGENCY MOTOR VEHICLE USE Indicates operation of any motor vehicle that is legally authorized by a government authority to respond to emergencies with or without the use of emergency warning equipment, such as a police

vehicle, fire truck, or ambulance while actually engaged in such response.

FATAL CRASH A crash that results in one or more fatalities within 30 (thirty) days of the date of the crash.

FATAL INJURY (K) Any injury that results in death within 30 days after the crash in which the injury occurred.

FIRST HARMFUL EVENT The first injury or damage-producing event that characterizes the crash type.

FIVE-POINT, OR MORE An intersection where more than two roadways cross or connect.

FOUR-WAY Where two roadways cross or connect.

GROSS VEHICLE WEIGHT RATING/GROSS COMBINATION WEIGHT RATING The Gross Vehicle Weight Rating (GVWR) is the amount recommended by the manufacturer as the upper limit to the operational weight for a motor vehicle and any cargo (human or other) to be carried. The Gross Combination Weight Rating (GCWR) is the sum of all GVWRs for each unit in a combination unit motor vehicle.

HELMET, OTHER THAN DOT-COMPLIANT MOTORCYCLE HELMET A helmet that is not a DOT-compliant motorcycle helmet. This includes bicycle, skateboard, and novelty helmets.

IMMERSION Entry of a vehicle into liquid so that it is completely covered or there is damage to the vehicle or harm to an occupant.

INJURY Bodily harm to a person that is not a fatal injury

INJURY STATUS The injury severity level for a person involved in a crash. The determination of which attribute to assign should be based on the latest information available at the time the report is completed, except as described for fatal Injuries.

INJURY CRASH a motor vehicle traffic crash that results in one or more injuries or that results in one or more fatalities more than 30 (thirty) days after the date of the crash.

INTERSTATE a trafficway on the National System of Interstate and Defense Highways as defined in Section 101, Title 23, United States Code.

JACKKNIFE An uncontrolled articulation between a tractor and trailer(s) that occurs at any time during the crash sequence.

LOCAL ROAD Any public roadway that is maintained by one of Connecticut's local political sub-divisions.

LIGHT CONDITION The type/level of light that existed at the time of the motor vehicle crash.

L-INTERSECTION A two-armed intersection in which one road intersects with another road but neither road extends beyond the other road.

LOCATION OF FIRST HARMFUL EVENT RELATIVE TO THE TRAFFICWAY The location of the first harmful event as it relates to its position within or outside the trafficway.

MANNER OF CRASH/COLLISION IMPACT The identification of the manner in which two motor vehicles in transport initially came together without regard to the direction of force. This data element refers only to crashes where the first harmful event involves a collision between two motor vehicles in transport.

MOST HARMFUL EVENT FOR THIS MOTOR VEHICLE Event that resulted in the most severe injury or, if no injury, the greatest property damage involving this motor vehicle.

MOTORCOACH A bus with a gross vehicle weight rating (GVWR) of 11,793 kilograms (26,000 pounds) or greater, 16 or more designated seating positions (including the driver), and at least 2 rows of passenger seats, rearward of the driver's seating position, that are forward-facing or can convert to forward-facing without the use of tools.

MOTOR HOME A van where a frame-mounted recreational unit is added behind the driver or cab area or mounted on a bus/truck chassis that is suitable to live in and drive across country.

MOTOR VEHICLE Any motorized (mechanically or electrically powered) vehicle not operated on rails.

MOTOR VEHICLE BODY TYPE CATEGORY The category indicating the general configuration or shape of a motor vehicle distinguished by characteristics such as number of doors, rows of seats, windows, or roof line. Personal conveyances

– such as skateboards, motorized toy cars, and wheelchairs are not considered motor vehicles.

MOTOR VEHICLE MANEUVER/ACTION The controlled maneuver for this motor vehicle prior to the beginning of the sequence of events.

NO APPARENT INJURY (O) A situation where there is no reason to believe that the person received any bodily harm from the motor vehicle crash. There is no physical evidence of injury and the person does not report any change in normal function.

NON-MOTORIST ACTION/CIRCUMSTANCE PRIOR TO CRASH The action of the non-motorist immediately prior to the crash and an indication of whether the non-motorist was walking/cycling to/from school.

NON-MOTORIST ACTIONS/CIRCUMSTANCES AT TIME OF CRASH The actions/circumstances of the non-motorist that may have contributed to the crash. This data element is based on the judgment of the law enforcement officer investigating the crash.

NON-MOTORIST LOCATION AT TIME OF CRASH The location of the non-motorist with respect to the roadway at the time of crash.

OTHER STATE ROUTE A trafficway within a state traffic way system, but not an Interstate or U.S. Route.

PEDALCYCLE Includes bicycles, tricycles, unicycles, pedal cars, etc.

PEDESTRIAN A person who is not an occupant of a motor vehicle in transport or a pedal cyclist.

PERSON TYPE The type of person involved in the crash.

POSSIBLE INJURY (C) Any injury reported or claimed which is not a fatal, suspected serious or suspected minor injury. Examples include momentary loss of consciousness, claim of injury, limping, or complaint of pain or nausea. Possible injuries are those which are reported by the person or are indicated by his/her behavior, but no wounds or injuries are readily evident.

PROPERTY DAMAGE ONLY (PDO) CRASH A motor vehicle traffic crash in which no participants incurred a fatality or an injury

RELATION TO JUNCTION The coding of this data element is based on the location of the first harmful event of the crash. It identifies the crash's location with respect to presence in a junction or proximity to components typically in junction or interchange areas.

RESTRAINT SYSTEMS The restraint equipment in use by the occupant.

ROADWAY ALIGNMENT AND GRADE The geometricS or layout and inclination characteristics of the roadway in the direction of travel for this vehicle.

ROADWAY SURFACE CONDITION The roadway surface condition at the time and place of a crash.

ROUNDABOUT Circular traffic patterns in which yield control is used on all entries, circulating vehicles have the right of way, pedestrian access is allowed only across the legs of the roundabout behind the yield line and circulation is counter-clockwise and passes to the right of the central island.

SEATING POSITION The location for an occupant in, on, or outside of the motor vehicle prior to the first event in the sequence of events.

SEQUENCE OF EVENTS The events in sequence related to a particular motor vehicle, including both non-collision as well as collision events.

SPEEDING RELATED Indication of whether the investigating officer suspects that the driver involved in the crash was speeding based on verbal or physical evidence and not on speculation alone

SUSPECTED MINOR INJURY (B) Any injury that is evident at the scene of the crash, other than fatal or serious injuries. Examples include lump on the head, abrasions, bruises, minor lacerations (cuts on the skin surface with minimal bleeding and no exposure of deeper tissue/muscle).

SUSPECTED SERIOUS INJURY (A) Any injury, other than a fatal injury, which results in one or more of the following: severe laceration, broken or distorted limb, skull or chest injury, crush injury, significant burns unconsciousness when taken from the crash scene, or paralysis.

T-INTERSECTION An intersection where two roadways connect in a perpendicular manner and one roadway does not continue across the other roadway. The roadways form a "T".

TOO FAST FOR CONDITIONS Traveling at a speed that was unsafe for the road, weather, traffic or other environmental conditions at the time.

TOWED DUE TO DISABLING DAMAGE Disabling damage implies damage to the motor vehicle that is sufficient to require the motor vehicle to be towed or carried from the scene. Towed Due to Disabling Damage identifies if a vehicle involved in a crash is removed from the scene due to damage incurred. Towing assistance without removal of the vehicle from the scene, such as pulling a vehicle out of a ditch, is not considered to be "towed" for the purposes of this element.

TRAFFIC CIRCLE An intersection of roads where motor vehicles must travel around a circle to continue on the same road or leave on an intersecting road.

TRAFFICWAY DESCRIPTION Indication of whether or not the traffic way for this vehicle is divided and whether it serves one-way or two-way traffic. A divided trafficway is one on which roadways for travel in opposite directions are physically separated by a median.

U.S. ROUTE A trafficway numbered by the American Association of State Highway and Transportation Officials, but not an Interstate.

VEHICLE A transport device, or a unit, made up of connected transport devices, used for moving persons or property from one place to another and is neither an aircraft nor a watercraft

VEHICLE DAMAGE Subfield 1 of this element is intended to collect the approximate contact point on this vehicle associated with this vehicle's initial harmful event. If the initial harmful event does not involve a collision, then code "Non-Collision" (refer to glossary). Subfield 2 identifies all areas damaged on the vehicle as a result of this crash. Subfield 3 identifies the extent to which the damage affects the vehicle's operability rather than the cost to repair.

VEHICLE MILES OF TRAVEL (VMT) The estimated number of miles driven by all motor vehicles on Connecticut's public roadways.

WEATHER CONDITIONS The prevailing atmospheric conditions that existed at the time of the crash.

WORK ZONE - RELATED (CONSTRUCTION/ MAINTENANCE/UTILITY) A crash that occurs in or related to a construction, maintenance, or utility work zone, whether or not workers were actually present at the time of the crash. 'Work zone-related' crashes may also include those involving motor vehicles slowed or stopped because of the work zone, even if the first harmful event occurred before the first warning sign.

Y-INTERSECTION An intersection where three roadways connect and none of the roadways continue across the other roadways. The roadways form a "Y".

1. No
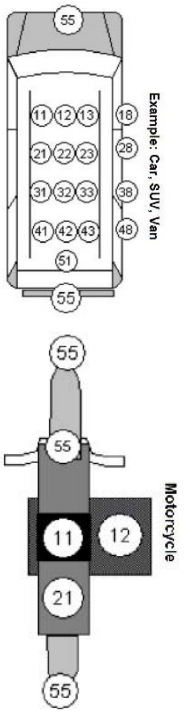
2. Racing
3. Exceeded Speed Limit
4. Too Fast for Conditions

SEATING POSITION FIRST DIGIT ☐
1_. Front Row

SECOND DIGIT
_1. Left *Seat (usually the motor vehicle or motorcycle driver except for postal vehicles and some foreign vehicles)*
_2. Middle Seat
_3. Right Seat
_8. Other Seat



DRIVER ACTIONS *(choose up to 4)* ☐
1. No Contributing Action
2. Ran Off Roadway
3. Failed to Yield Right-of-Way
4. Ran Red Light
5. Ran Stop Sign
6. Disregarded Other Traffic Sign
7. Disregarded Other Road Markings
8. Improper Turn
9. Improper Backing
10. Improper Passing
11. Wrong Side or Wrong Way
12. Followed Too Closely
13. Failed to Keep in Proper Lane
14. Operated Vehicle in Reckless Aggressive Manner
15. Operated Motor Vehicle in Inattentive, Careless, Negligent, or Erratic Manner
16. Swerved or Avoided Due to Wind, Motor Vehicle, Object, Non-Motorist in Roadway, etc.
17. Over-Correcting/Over-Steering
18. Overtaking Cyclist
88. Not Applicable
97. Other Contributing Action

DRIVER DISTRACTED BY ☐
1. Not Distracted
2. Manually Operating an Electronic Communication Device *(Texting, etc)*
3. Talking on Hands-Free Electronic Device
4. Talking on Hand-Held Electronic Device
5. Other Activity, Electronic Device
6. Passenger
7. Other Inside the Vehicle *(eating, hygiene, etc.)*
8. Outside the Vehicle

CONDITION AT TIME OF CRASH *(choose up to 2)* ☐
01. Apparently Normal
02. Physically Impaired
03. Emotional *(depressed, angry, etc.)*
04. Ill *(sick)*, Fainted
05. Asleep or Fatigued
06. Under the Influence *(Medications/Drugs/Alcohol)*
88. Not Applicable
97. Other

CONNECTICUT UNIFORM POLICE CRASH REPORT

Form PR-1 REV February 03, 2015

Motor Vehicle ID:

Appendix B: Commercial Vehicle
Complete this sheet for qualifying Commercial Vehicles

Case Number:

DOT Identifier:
For DOT use only

QUALIFYING COMMERCIAL VEHICLE

Use This Form Only For a: QUALIFYING VEHICLE

- Any motor vehicle displaying a hazardous material placard OR
- A motor vehicle having a gross vehicle weight rating (GVWR) or a gross combination weight rating (GCWR) of more than 10,000 LBS used on public highways to carry property OR
- Any motor vehicle designed to transport more than eight persons including the driver.

in a QUALIFYING CRASH

Any crash that involves a qualifying vehicle and which results in one of the following:

- Fatality to any person, OR
- Injury to any person that requires immediate medical treatment away from the crash site
- Disablement of any vehicle as a result of damage sustained in the crash

CARRIER INFORMATION

CARRIER NAME

STREET ADDRESS or P.O. BOX

US DOT NUMBER *(8 digits, right justified):*

If no US DOT Number, please provide:

STATE AND STATE ISSUED ID NUMBER

CITY | STATE or PROVINCE | POSTAL CODE | COUNTRY: United States

POWER UNIT OWNER INFORMATION

Please use the Vehicle Sheet to Document the Owner of the Power Unit.

If the Driver of the Power Unit is Different from the Owner, Please Use the Back of the Vehicle Sheet to Document the Owner.

TRAILER 1 OWNER INFORMATION

OWNER NAME ☐ Info same as carrier ☐ Info same as power unit

STREET ADDRESS or P.O. BOX

Plate #: Invalid Plate / No Plate
