- 25 #78744 C. moll.

5/1/45 - Trees seem to be healthy and have produced nuts for several years. Have weathered -20°, and 1941 temperatures killed most of the fruit trees.

6/5/45 - 12 trees living. He planted 15 trees + gave 10 of them to a neighbor, the latter not surviving the summer. His trees planted on a slight elevation next to "farmstead," with fair air drainage; rich, dark black, medium heavy soil. Clean cultivation, no fertilization. Some winter killing of last year's growth.
